Parliament met on February 5th, and the first thing that was done was to propose a Bill for the suppression of the Catholic Association. This passed the House of Commons on the 17th, and the Government immediately began to prepare for the introduction of the Catholic Relief Bill, which formed the other element in their Irish policy. Their plan was to put down the Catholic Association on the one hand, and, on the other, to satisfy the demands which had been agitated by that body. It was now found, however, that the King was disposed to draw back as regards this second part of the Government scheme. In the Cabinet, on the 26th, the Duke said his conversation with the King had been very disagreeable. The King begged he would not speak to the Household, and seemed to intimate that they were to vote against the Government. "The King's conversation before mixed companies and his servants," says Lord Ellenborough, "has been most imprudent. The Duke of Cumberland has had great effect on him." It was decided that the Duke of Wellington should not only write a strong remonstrance to the King, warning him that the Government were committed to their policy and must go on with it or resign, but should himself go to Windsor to bring the matter to a point. The interview took place next day. It lasted five hours and a half, and the King ultimately yielded all points, even to the extent of desiring the Duke of Cumberland to leave England. The King was in a very agitated state, and even spoke of abdicating. The Duke of Wellington said it was the more painful in consequence of the very peremptory language he was obliged to hold to him. However, the King was very kind and kissed him when he left. Everything seemed to be settled now, but on March 2 everything was once more unsettled. The King's scruples had returned with unabated vigour, and he wished to withdraw his promise. "The King again spoke of abdicating, and of sending Lord Bexley with a message to that effect to the House of Lords." He took to his bed, and the Duke found him there when he went to Windsor for another long interview. Next day the Duke, the Lord Chancellor, and Mr. Peel waited on the King, and assured him that they were perfectly firm and resolute, and must either proceed with the Relief Bill or resign. The King, as we know from another source, objected to the proposed omission from the Oath of Supremacy of the words relating to the spiritual and ecclesiastical jurisdiction of the Pope, and no arguments or appeals could shake him from this position. The Ministers then intimated that they had no alternative but to resign, and parted with the King on this understanding. At the Cabinet dinner that night, the Duke stated that Peel would next day withdraw his notice about the Relief Bill, because he was no longer the King's Minister. In the interval, however, the King had again changed his mind—indeed his Ministers had not been gone more than a few hours when he wrote to the Duke as follows:—

> Windsor Castle, Wednesday Evening,
> 8 o'clock, 4 March, 1827.
>
> My dear Friend,—As I find the country would be left without an Administration, I have decided to yield my opinion to *that* which is considered by the Cabinet to be for the immediate interests of the country. Under these circumstances, you have my consent to proceed as you propose with the measure. God knows what pain it costs me to write these words.
>
> G. R.

It is mentioned in Lord Ellenborough's memoranda that the King wrote the letter at half-past nine, though he dated it eight o'clock. The Cabinet were glad to be relieved from their embarrassment, but thought it desirable to have a distinct pledge from the King—it must be in writing, Peel insisted—about which there could be no mistake. This was obtained, and the Duke of Wellington announced in the House of Lords that, in introducing the Relief Bill, he had the "sanction and support of His Majesty."

We have seen what were the Duke of Wellington's relations to his Cabinet, or at least to the most important member of it, Mr Peel, and also to the King. He had first to bring over Mr. Peel to his views, and afterwards the Cabinet was liable at every turn to be checkmated by the King. And, besides this, he was the head of a party, and he had his party to deal with. There is a familiar nursery story about the man who had to take a fox, a goose, and a cabbage over a river in a boat that would only hold two besides himself. This was somewhat the position of the Duke of Wellington on the question of the Roman Catholic claims. The King, in his resistance to any proposal for concession, trusted to support within the Cabinet, and the Duke's opponents in the Cabinet looked hopefully to the party. The Duke saw clearly enough that, if he began by endeavouring to bring over the party to his side, his reluctant colleagues and the King would at once pluck up courage to oppose him, and that it was necessary to make sure of his ground with the latter before he could even venture to take his party into his confidence. The consequence was that when at last he broke his project to the world, he was accused of masked batteries, and every kind of treachery. In the course of the winter he had written to a clergyman in Ireland that he saw no prospect of a settlement of the Roman Catholic question, and even Sir G. C. Lewis thinks that this is evidence of duplicity. At that date the Duke was still under the impression that Mr. Peel meant to withdraw from the Government, and he had every reason not to trust for support to the King. It would have been simple madness for him to have pledged himself to any measure under such circumstances. Moreover, it was difficult for him to speak out freely and openly on the subject. He saw that it was impossible to continue to keep

up even the form of government in Ireland without civil war, from which he shrank both as a soldier and a statesman; but he did not think it desirable to say so to all the world.

All the documents relating to the duel with Lord Winchilsea, including Dr. Hume's report, are given in this volume; and however little we can nowadays sympathize with the ordeal to which the Duke appealed, it is impossible not to admire the calm, matter-of-course intrepidity with which he went through with what he regarded as "only a part of the Catholic question." His mistake was in supposing that a proof of personal courage was necessary in answer to accusations of political treachery. Among other letters on the subject he received two from Jeremy Bentham. The first begins:—"Ill-advised man! Think of the confusion into which the whole fabric of government would have been thrown had you been killed, or had the trial of you for the murder of another man been substituted in the House of Lords for the passing of the Emancipation Bill." And then, after pointing out the folly of the Duke's conduct, he mentions that:—"T'other day O'Connell was with me; amongst other things he gave me his history in regard to duelling"—which was that he had been out and killed his man, and had thereupon made a vow, to which he gave general notoriety, that he would never engage a second time in such a contest, no matter what the provocation might be. Bentham adds:—

> Mere insensibility to danger of pain and death is a virtue which man possesses in joint tenancy with the bull, the bear, and their challenger, the dog. Now, then, if to personal and physical you add *moral* courage, I will tell you what to do. Go to the House of Lords; stand up there in your place; confess your error; declare your repentance; say that you have violated your duty to your Sovereign and your country; and promise that on no future occasion whatsoever, under no provocation whatsoever, in either character—that of giver or that of accepter of a challenge—will you repeat the offence. Here am I, leader of the Radicals (in that character at least am I, and I alone, every now and then spoken of), leader of the Radicals, more solicitous for the life of the leader of the Absolutists than he himself is! What paradoxes, what prodigies, has not the field of politics given birth to of late!

The Duke civilly acknowledged the remonstrance with his compliments, and Bentham's next letter is addressed to "My dear Duke," and winds up with the postscript, "My social affections are warm; the promptitude of your attention has called forth the garrulity of old age." Bentham tells the Duke he has designs on him. He wants to make him "do what Cromwell tried at and found it was too much for him." Incidentally he mentions that O'Connell had made himself a deadly marksman before the duel by practising at the heads of dogs, which in his part of Ireland used to attack men on horseback by biting the horses' heels.

The perusal of each succeeding volume of the Duke of Wellington's despatches confirms our impression of his strong common sense and practical sagacity. In a despatch of 9th October, 1828, the Duke makes some remarks in regard to Persia which may perhaps not be unseasonable at the present hour:—

> No combination which can be made in Asia, and no improvements in the state and resources of the Persian Government which we can think will probably occur, could enable the King of Persia to become a formidable enemy to the Emperor of Russia. That which we ought to inculcate, then, is peace and good neighbourship. A strict and good-humoured performance of treaties, and the manifestation of a strong desire to continue on good terms, would have a good effect; and such measures are not at all inconsistent with an entire independence of, and even freedom from, Russian control, and even council; and great attention to the resources of the country, financial as well as military, and the completion and perfection of its establishments.

The Duke goes on to say that it is very desirable to encourage both the King of Persia and the Pasha of Bagdad to improve their military resources, not for use against Russia, but for the security of their own authority. "Without such aid the first sound of foreign war occasions insurrection and disorder and expense everywhere." He also remarks:—

> We must observe that the advice which we have under consideration is to be given to a semi-barbarous, but very corrupt, Court and people. The Ministers, the prince, the King himself, would sell our advice for half-a-crown; and we must take care that, while peace is our real object and policy, and the real intention which we have in view, we are not accused of exciting war against the Emperor on his Eastern frontier.

DAVIES'S THEOLOGY AND MORALITY.*

MR. LLEWELYN DAVIES, we should guess, must have had some difficulty in discovering a suitable title for the essays which he now republishes from several magazines. We might expect from the leading title that they would be chiefly devoted to the very important questions about the bearing of theology upon morality. But in fact this topic occupies only a small portion of his pages, and is for the most part treated very indirectly. The alternative title, "Essays on Questions of Belief and Practice," seems to be as much too wide as the other is too narrow; for it includes a good half of the field in which the human intellect may find employment. The essays are, in fact, very discursive. Some of them deal with theological topics, such as the nature of prayer; others discuss ethical problems; one is devoted to a criticism of Renan's *Origines du Christianisme*, another to an account of Erastus; and the concluding essays are upon Pauperism, Trade-Unionism, and Communism. It is difficult to give any general idea of so miscellaneous a collection, a large part of which, moreover, turns upon points which we do not wish to discuss in this place. We may, however, say that Mr. Davies expounds the views of the Broad Church party, of which he is a distinguished member; and that he shows a spirit of tolerance and candour which would be honourable in an adherent of any party. These virtues, indeed, though they cannot be too highly commended, are not without their drawbacks in a literary point of view. It is well and right that a sincere Christian should give a full measure of justice to the arguments of sceptical writers; that he should be able to appreciate them fairly is a necessary condition of his giving a satisfactory answer; but it cannot be denied that candour is unfortunately apt to mean coldness. We do not in the least mean to accuse Mr. Davies of want of fervour; on the contrary, he speaks like a man profoundly convinced of the truth and importance of his own doctrines; and yet the effort to be strictly just gives a certain air of dryness and constraint to his pages. He writes like a man who is forcing himself to be just to theories which at the bottom of his soul he detests, and the compulsory calmness has somehow extinguished the rhetorical fire which should give animation to his pages, though it might render them less philosophically valuable. On the whole, therefore, we cannot fairly say that Mr. Davies's book carries us along with much vivacity. Though short, it is sometimes dull; and whilst we feel that he is a very sensible and serious writer, whose views well deserve attention, we cannot commend his book to persons who insist upon having their literature spiced with wit, humour, or pathetic eloquence.

The general temper of his mind is well exhibited in an essay on "Pauperism as produced by Wealth." Nothing could be more sound and sensible. Mr. Davies is perfectly free from the charge sometimes brought against clergymen of a disposition to encourage mere sentimental almsgiving without reference to consequences. He points out with judicial calmness the various ways in which pauperism is occasionally stimulated by wealth. The arbitrary changes due to the influence of fashion in the channels through which the stream of wealth flows; the recklessness sometimes produced by a sudden rise of wages; the contagious influence of luxurious habits, and especially the "social mischief—it would be scarcely uncharitable to call it a vice—of horse-racing," are all potent causes of demoralization. Betting on the great races is, as he assures us, one of the main amusements of the leisure hours of the working-man, and is far more absorbing than politics. Pauperism, again, is swelled in many cases by the thriftless habits encouraged by the system of domestic service in the houses of the extravagant rich. But of course the leading cause of all is the reckless mode of distributing charity. On this, as on the other points, Mr. Davies speaks with the authority of one who, as rector of a London parish, is thoroughly familiar with the evils which he describes, and who has thought carefully as well as observed accurately. Perhaps he does not say much that is new, and he does not attempt to give any sensational character to his remarks; his testimony is valuable, and he is content to give it in the most straightforward and unadorned fashion.

We will turn by way of contrast to another paper in which Mr. Davies ventures upon the more disputable ground of moral speculation. In an article headed "Weak Points in Utilitarianism," he appears as the commentator on a posthumous work of the late Professor Grote, of Cambridge. Mr. Grote possessed the virtue of candour in an even more marked degree than Mr. Davies. Indeed he pushed it to such an extreme that it often seems as if he had no opinions at all. He seems to have had a positive horror of coming to any fixed conclusions. With a mind singularly ingenious and fertile in suggesting difficulties, and with a delight in speculation equalled only by his dislike to reducing his speculations to a form fitted for publication, he left behind him a mass of unfinished materials which appeared in the outward form of a book, but strangely desultory and perplexing. Few people probably have read it through, though a reader is rewarded by stray touches of character indicating a perfectly morbid dislike to dogmatism. "What I have most dreaded," he says, in a passage quoted by Mr. Davies, "has been lest anything that I have said should appear to have a completeness that does not belong to it, and lest I should bar up any ways in which the thought of any interested in these subjects should tend to expand itself." Mr. Davies is the interpreter of some of the objections raised by this hesitating, though acute, thinker to Mr. Mill's essay on Utilitarianism; and generally, as it seems, agrees with them. Mr. Davies himself, however, is not very definite; and between the two we are rather at a loss to discover how far the critic or the critic's critic agrees to or dissents from the definite statements laid down by Mr. Mill. We will briefly touch one or two of the points mentioned, and endeavour to indicate our own view of the principles involved.

The first objection raised by Professor Grote, and partly endorsed by Mr. Davies, is the ordinary one as to the difficulty of defining that happiness, the production of which, from the utilitarian point of view, is the proper object of morality. Can we define happiness with sufficient clearness to make it the one measure of the rightness of actions? Can we establish a hierarchy of pleasures, and say, from mere experience, that some pleasures are "higher" than others? Mr. Mill attempts to answer this last question by saying that all persons who are equally capable of enjoying both classes of pleasure do in fact give a preference to those which we call the highest. But even if this be so, are we capable of thus measuring pleasures by a definite scale? The mind itself changes as the pleasures change. A youth who has been vicious becomes devout in his old age. In each state he will generally wonder how he could find any pleasure in what was most

* *Theology and Morality.* By the Rev. J. Llewelyn Davies. London: Henry S. King & Co. 1873.

pleasurable in the other state. How, then, can he calmly compare the two?

The task of inventing any calculus which will enable us to judge the relative value of different pleasures as we judge the price of different articles of commerce, to pronounce a sensual pleasure to be worth only a penny, and an intellectual pleasure to be worth a guinea, may indeed be pronounced impossible. And Bentham's mode of speaking as though he could weigh pleasures and pains in a balance is clearly absurd. But the Utilitarian might reply that, though this proves that we cannot form an ideally perfect code of ethics, it does not prove that our actual morality is not constructed on Utilitarian principles. Whatever theory of happiness be maintained, it is quite clear that happiness is promoted by forbidding murder, enjoining truth, and by similar elementary rules. It may be doubted whether there is any generally recognized moral precept which would be affected by accepting any existing theory as to the nature of happiness. The objection would be valid if moralists endeavoured to determine what every man ought to do under all conceivable circumstances; but those broad and simple generalizations which are embodied in morality rest upon a basis independent of these refined speculations.

The difficulty of proving that some pleasures are "higher" than others, whatever be the meaning of the words, seems to be equally great on either hypothesis. So long as everybody is agreed that intellectual are preferable to sensual pleasures, it seems as easy to justify the preference by arguing that experience shows them to be greater as by arguing that we know them intuitively to be better. The cruder form of Utilitarianism into which Mr. Mill sometimes appears to fall is indeed exposed to some difficulty. The individual testimony to the superiority of one class of pleasures is as weak and fluctuating as Mr. Grote asserts. But a later Utilitarian would point to the admiration felt for those who prefer the highest pleasures as a proof that the accumulated experience of the race has, in fact, demonstrated that they are of greater importance to the collective welfare. The intuitionist, here represented by Mr. Grote and Mr. Davies, is right in denying that each man's moral approbation of certain qualities is merely the result of his own views of utility; and we must have recourse to more elaborate modes of explaining so complex a phenomenon. But the mere appeal to an intuitive knowledge is futile; for as soon as any practical question arises on which men's opinions really differ—such, for example, as the superiority of an ascetic or an epicurean type of morality—we can learn nothing by opposing rival intuitions, and must have recourse to some such external test as that provided by the Utilitarian morality.

Another difficulty in Mr. Mill's theory, which is criticized by Mr. Grote, is Bentham's dictum that every one is to count for one and nobody for more than one. The difficulty of applying this arithmetical valuation of the amounts of happiness is insisted upon by Mr. Grote and his follower. It has lately been discussed by Mr. Fitzjames Stephen in his book on *Liberty, Fraternity, Equality*, which we lately reviewed. Without going into the wider questions with which he connects it, we may briefly notice Mr. Grote's chief argument. Nobody, he says, would tolerate the principle, "Love your father, your neighbour, your friend, and your benefactor alike," yet this is in fact what the principle of everybody counting for one leads to. But the principle has been tolerated, for some of the revolutionary fanatics of the last century did not shrink from arguing upon these grounds that friendship was not a virtue. We fully agree, however, that it is absurd; but we doubt, as Mr. Davies appears to do, whether it can be fairly attributed to Mr. Mill. It is at any rate only a logical result from the crude Utilitarianism which confounds the criterion with the motive—a fallacy which Mr. Mill has thoroughly exposed. The sum of happiness will plainly be increased by encouraging friendship and the family affections, and in fact everybody will be happier if each person attends, not to everybody, but to his own circle. Therefore, if every man's happiness is of equal importance, it by no means follows that each man should be equally interesting to every one else. The dogma itself seems to us to be quite untenable, except as a rough provisional rule; and it really results, not from an intelligent utilitarianism, but from the impracticable tenet of absolute equality which breaks down at every step as soon as we seek to apply it to particular cases. Mr. Davies, in short, and his leader seem to us to have put some very good objections to the older forms of Utilitarianism, but we do not think that they would be equally successful against its later developments. Mr. Davies himself, however, does his best to hold the balance fairly, and none of his opponents would have any cause to complain of his management of the case. We have probably said enough to give some general notion of his merits; and we take leave of him with the hope that his readers may not be deterred by the dryness of his manner from penetrating to the more nutritious substance of his book.

A GARIBALDIAN NOVEL.*

IT is a question how far a work of fiction should deal with ethics, politics, or history at all; but certainly there is no question that these should be subordinate to the primary consideration of art. Novels with a purpose are apt to be exceedingly tiresome, and most of us would prefer to have the sermon contained in them delivered honestly from the pulpit, or the essay of which they are the dramatic exemplification knit up into the terseness of its natural form. As for history, no historical novel that was ever written can pretend to absolute truth; and if it did, there would be no reason why it should have been written at all, since the naked unembellished facts of history have a vitality of dramatic interest which the peculiar method of narration necessary to a novel weakens rather than strengthens. We know the concrete facts, say, of how Leonidas and his three hundred fell at Thermopylæ; or how the fair Rosamond lived like a bird in a bower till love had to pay the penalty of death to jealousy; or how Henry VIII. sent Anne Boleyn to the block, and the blood of the murdered Rizzio stained the robe of Mary Stuart. But the elementary pathos and passion of none of these things would be intensified by the false millinery and absurd diction of a novel-writer translating into a Greek speech the sentiments of a nineteenth-century Order of the Day; nor would "By Pallas" or "O Zeus," "Beshrew me, gossip," or any other odd expletive supposed to give a dash of local colour to a foreign rendering, conceal the essentially modern treatment which must needs govern all such attempts, or add one grain's weight of power to stories in themselves so full of suggestion and excitement. If we want to know the power of history in its simplest form, we need only watch an intelligent child when repeating the crude facts it has just heard; and was there ever a Biblical story, told now in a few sentences, which did not, when dramatized and extended, lose in power just in proportion to its expansion? As for politics, the average novel-reader skips these as so many waste places in the green garden of romance; and neither Tadpole nor Taper in their most brilliant moments interests him so much as the progress of a little soubrette's commonplace love affair, or the discovery of a vulgar sensational crime.

Something of this kind of thought accompanies us in the second half of *Courtship and a Campaign*. Recognizing the enthusiasm which animates the writer, and the loyalty of his love for Garibaldi and the Italian cause, we demur to the art which gives the historical facts of the campaign so large a space in so small a work. Not that they are dry reading. The passion of the author's own heart communicates itself to his words; and the details of the "campaign" are as stirring as those of the "courtship." But for all that, it does not fall into the legitimate purpose of a novel to go into dates and details like a newspaper Correspondent; and we are yet too near to the struggle of 1866 to merge those dates and details into a broad whole which might serve as a magnificent background for an individualized group, though out of keeping as a minutely painted picture. We want, too, more of the real Italian life, of which we have only very meagre scratches as things are; but scratches so full of character and suggestiveness as to make us regret their meagreness. When Silvia, wearied with idleness, but, because she is an Italian girl, having nothing to do, looks out of her window on to the glaring, silent, tenantless street at three o'clock on a hot May day, we are made to feel the weary monotony of a signorina's life as well as the arid influence of that fierce afternoon sun, and we realize the deathlike stillness of the city during the time of the siesta. When Vittorio Giuliani paces up and down in the heat, so much in love with a pretty little girl whom he does not know and has only seen at mass as to brave the chance of a sunstroke for the pleasure of a glimpse of her grey eyes and brown head from behind the shutter, we recognize the impulsive ardour of the Southern temperament, and measure the distance which separates one of a nation that can fall sick of love so literally at sight from the steady-going Northerners who look before they leap, and calculate moral and social values before they contemplate exchange and barter. When somnolent and "many-chinned" Signora Merighi, pretty Silvia's commonplace mother, refuses to place her daughter under the care of an old man and the family friend as an offence against propriety, and when even middle-aged nun-like Aunt Giulietta is not considered a sufficient chaperon for her in public because she is unmarried; when Silvia herself by chance comes out of church behind her mother and not before her, as is the careful Italian custom, and so takes the holy water from Vittorio—in all these graphic traits and touches we see the special characteristics of foreign life. Yet we confess that we stumble at the Anglicized portrait of Teresa Fantoni—her personal energy, her love of liberty, her Northern and Protestant-like self-will for the one part, and for the other part at the dear old-maid Aunt Giulietta, with her universal helpfulness and Protestant-like spinsterhood. M. Dalin, however, ought to know all this part of his business better than we do; and we should be sorry to limit his knowledge of the society of which he treats, or to say that his delineation is incorrect because certain of the things of Italy remind us of those of England.

Both story and characters are pleasant so far as they go. To be sure, the first is slight and the second are simple, with no attempt at complexity in the one or subtlety in the other. But it is better to have a commonplace theme well wrought than one more ambitious in aim falling short in execution. *Courtship and a Campaign* is a novel reduced to its primary elements. There is a rich young man and there is a poor young man, a rich young lady and a poor young lady, with the respective parents necessary for their existence; and the four fall in love with each other, at cross corners with parental desire, though harmoniously enough

* *Courtship and a Campaign.* A Milanese Tale of '66. By M. Dalin. 2 vols. London: Sampson Low & Co. 1873.

with their own. Vittorio Giuliani, the only son of a rich Comasco who had started in life as a mere lad with a pedlar's pack in England and a shrewd business head to help him to his fortune, and who is now a *riccone* just outside Como, is destined for Teresa Fantoni, the only daughter of a rich silk manufacturer. But he falls in love, as we said, at sight with Silvia, the penniless daughter of a poor *impiegato*; while Teresa does the same kind office by one Ernesto, or Major Bossi, an impecunious young rake, whom, however, love for Teresa reforms—as love does not reform rakes, save in novels. With the beginning of this imbroglio of interests and emotions, news comes to Milan that the Government has given permission for the enrolment of five thousand volunteers under Garibaldi. Of course Vittorio and Bossi, and their young Sicilian friend, Cardi, join the red-shirts; but the first has some difficulty in persuading his father to give his permission, as old Giuliani believes in trade, diplomacy, peace, and Louis Napoleon; and, being an Italian son, Vittorio would have hesitated long before committing an overt act of disobedience to his father, even for Garibaldi and Italy. The old man's consent comes at last, but rather as the result of public opinion and the influence of example, than from anything his son could say. We all remember the echo of that "mad enthusiasm" for Garibaldi and "Italia Una" which stirred even our colder blood; so that the state of excitement which M. Dalin paints as oversetting all old habits and established convictions throughout Italy generally, even to the very heart of cautious mercantile Milan, seems in no way exaggerated in its political aspect, though we can hardly accept the social consequences with unquestioning faith. One common tie of patriotism might bind class and party as man with man—Italians fighting for their country; and under this excitement things might be done at which society would have stood aghast had they been attempted in a time of tranquillity. But will this plea account for the manner of Vittorio's introduction to the Merighis, without parental sanction, and as independently as if he had been an English youth? for the undisguised warmth of his attentions to pretty Silvia? for her frank confession of love for him, very natural in a signora, very unnatural in a signorina? Will it account for Teresa Fantoni's leadership in the midst of matrons? for her headlong action at Borgo Nuovo? for her father's countenance of what would have been simple death and destruction to the fair fame of any Continental girl, and scarcely possible to an Englishwoman or an American? We wonder too if there is to be found in all Italy a woman of repute who, when an unmarried girl, had offered herself and her fortune to a man who hesitated about marrying her because of his poverty, as frankly as she would have offered him a cup of coffee; or if, in any time of excitement whatsoever, two virtuous young maidens could have been found nursing their wounded lovers among other men, and never a matron, never a Sister, nor yet a hospital nurse on the premises. Still more do we wonder if, when their lovers were convalescent, they would have been granted unlimited freedom of intercourse in the garden and the house; with one papa quietly closing the door on their raptures, and looking discreetly out of a staircase window while they embrace; and another yielding like a lamb when his daughter flies to him and asks his consent to an unwelcome marriage self-arranged—she taking her lover's hand, not he hers, as if the fact of the war had reversed the fact of sex, and a Garibaldina might forget the natural diffidence of a woman in her ways and works with a Garibaldino. All this mars the pleasure of the book, because it spoils its verisimilitude; for though human nature is the same elementally the whole world over, special manifestations are national, and the emotions express themselves with wide social differences in Italy and America, in Norway and Turkey.

If the story is inartificial, the characters are simple to correspond. Silvia is sweet and timid, modest and tender; Teresa is bold and resolute, loving and loyal. Vittorio is the model young man, brave, generous, pure, and faithful. Bossi is brave and generous, and faithful to his cause, but his morals are questionable, and his love affairs are confessedly of a character to disturb the dreams of husbands. Old Giuliani is by nature sordid, by habit bumptious, but his redeeming point is his love for his son; and old Fantoni is his thinner echo with a daughter in the place of the boy. Signora Enrichetta Merighi only shops and gossips; her husband, the *impiegato*, only jingles his keys and goes to the café to play *briscola* and *tresette* after dinner. Don Riccardo, the Signora's brother and a priest, is a benevolent old worthy with a soft manner, and Aunt Giulietta his sister, who keeps his house, is, as we have seen, a real English old maid, with sympathies for young love not after the manner of her race so much as after the manner of our own. On the other hand, Dr. Pinelli, who, by the by, reads like a portrait, is a benevolent old worthy with a vituperative habit of speech and a gruff way of doing tender things. The book is pretty however, though so slight; and what with its ardent Garibaldian sympathies, its military details of the campaign, its warm, but by no means unseemly, love-making, and one or two pathetic touches of war horrors, it will please more than one kind of reader, if it scarcely satisfies the requirements of sound criticism, or fulfils the canons of true art.

LETTERS OF JOHN SHILLINGFORD.*

THIS is a volume which we trust will set some one to work at the coming meeting of the Archæological Institute at Exeter. But when we say "some one," we do not mean any one that may turn up without distinction. Municipal history is a branch of history which yields to none in interest and importance, and it is one which has certainly lagged behind most others. There have been obvious causes why it should lag behind. Of all branches of history it is the most strictly local. That is to say, the materials are to be got at only by local research into the particular history of particular towns. There is no general municipal history in the sense in which there is a general ecclesiastical or Parliamentary or military history. The general municipal history is simply the result of gathering together all the particular municipal histories. Yet, from another point of view, there is no branch of history which has a wider bearing. The history of Exeter is of small moment, unless we take it in its place as part of the general municipal history of England; and even the general municipal history of England is of much smaller moment than it might be made, if it is not taken in its place as part of the general municipal history of Europe. The history of municipalities throughout Europe is emphatically a history of likenesses and of unlikenesses. The municipalities themselves seem, as far as they can, to follow nearly the same course in all parts of Europe. They struggle after much the same liberties in much the same fashion; but the result of their strivings differs widely in different countries according to the different nature of the external powers with which they had to deal. There is therefore a good deal of likeness between the beginnings of the history of towns in England, in France, and in Germany, while there is the most remarkable difference in their endings. It follows then that municipal history needs, at least as much as any other branch of history, to be treated in a wide and general way, with the greatest possible knowledge of general history. There is no subject which is less fit to be treated by the purely local inquirer. Nothing can be drearier than a talk about municipal matters from a local man who never thought of comparing the history of his own town with that of any other. And when it comes to a city which has so long and striking a municipal history as that of Exeter, the story becomes yet more worthy to be dealt with in the highest manner and by the ablest hands. A city which—whether it was or was not, as its citizens in the fifteenth century believed, unsuccessfully besieged by Vespasian—undoubtedly dates from Roman times—a city which was fortified by Æthelstan and from whose walls Swegen was beaten back till he found a foreign traitor within them—a city which stood forth before all others to withstand the Conqueror in the cause of the House of Godwine, and whose stout-hearted commons kept on the struggle after their chiefs had forsaken them—such a city as this really has a history of its own. In later times of course Exeter has had no chance of playing such a part as she played when she seemed likely to become the ruling city of a Dumnonian civic confederation; but the archives of the city are understood to be of special richness and value, and several points of great interest stand out in the civic annals. Why the Institute has so long delayed its visit to a city like this is one of those mysteries which only those who are behind the scenes can hope to unravel. But, as at last it is going to Exeter, it is to be hoped that the meeting so long looked for will be made the occasion, not for senseless rambles to distant spots, but for a thorough scholar-like searching into the antiquities of the city itself. At Exeter the main interest is not ecclesiastical or architectural; the city is not like those cities and towns which have grown up around a bishopric or abbey; Exeter was famous for ages before there were Bishops of Exeter, and the history of the city ought this time to take precedence of the history of the church. It will be deeply to be regretted if, on such an occasion as this, the municipal archives of Exeter fail to be explored by the hand best qualified, not merely to transcribe or to calendar, but to assign them their place in the history of England and of Europe.

It is out of the peculiar relation between the city and the bishopric that the present collection of letters and documents has its origin. Exeter, as we have just said, was a case of a bishopric founded at a comparatively late time in a city which was already, according to the standard of those times, great and flourishing. The city did not grow up around the walls of the church, but the church found itself an abode within the walls of the city. Nor was the see founded, like Lincoln and Norwich, in the days of the Conquest, when the Norman Bishop, with the Norman King and the Norman Earl to back him, could deal with English burghers pretty much as he pleased. The bishopric of Devonshire was removed from Crediton to Exeter in the happy and peaceful days of the sainted Edward, and the first Bishop Leofric was said to have been personally installed by the King and his Lady, who had a special interest in a city which formed part of her morning-gift. The church, the palace of the Bishop, the houses of his canons, and the whole ecclesiastical settlement, arose within the walls of the city, within the natural jurisdiction of its magistrates. Against such a state of things the mild Leofric and his successor Osbert, the one Norman who is recorded to have turned Englishman, might not be disposed to kick. But it was a state of things which would naturally be most irksome to the ordinary lordly

* *Letters and Papers of John Shillingford, Mayor of Exeter, 1447-50.* Edited by Stuart A. Moore, F.S.A. Printed for the Camden Society. 1871.

prelates of feudal times. Disputes could not fail to arise; the Bishops claimed an exemption for themselves and their Chapters for their whole precinct and their whole following, from the jurisdiction of the city. The Mayor and Commonalty stoutly maintained that nothing had taken away the ancient authority of the city magistrates over all the space within the city walls and over every inhabitant of the same. As usual in those days, questions of this kind led to personal violence, and the citizens and the inhabitants of the Close each had their tales to tell against the other. Nor is it very wonderful if the Church party sometimes proved the stronger and fiercer. There is no need to suppose that the Bishop or the Dean fought with his own hands, but it is easy to see that their followers would contain something which came nearer to a military element than anything to be found among the citizens. They were fighting for privilege, for a privilege which had about it something of an aristocratic as well as of a religious character, and men often fight, more fiercely if not more stedfastly, for privilege than for real freedom. The matter came to a head in the reign of Henry the Sixth, when Edmund Lacy was Bishop and John Shillingford was Mayor, and much pleading at law was going on about the matter from 1432 to 1448. We have here the complaints of the Mayor and the answers of the Bishop, and we have a number of letters of John Shillingford himself, which are valuable both from the light which they throw upon the local history, from their own inherent vigour and graphic power, and as being among the earliest English letters—it will be remembered that they belong to the age of the Paston Letters—that we have. The Mayor had several times to go to and fro between London and Exeter, to have, what we should now think strange, personal interviews with the Lord Chancellor, Archbishop Kemp, and, what we should think stranger still, to make him presents of fish. Some Chancellors of much later times might have despised the fish, and would not have looked favourably on the suitor unless he brought presents of a more precious kind. The Mayor however was always very well received, and he gives very graphic accounts of his interviews with the Chancellor. At other times he comes across the famous Sir John Fortescue, who was then Chief Justice. In the end the matter was, by consent, heard in 1448 at Barnstaple, before two Justices of the Court of Common Pleas, when judgment was given on the main point for the Bishop—that is to say, the Cathedral Precinct, called St. Stephen's fee and the Bishop's fee, was to remain exempt from the jurisdiction of the city.

A great number of curious points of all kinds turn up in the course of the controversy, and we could wish that Mr. Moore had taken more pains to explain some of them, instead of hardly doing anything more than edit the text. What, for instance, is the meaning of the very first thing which the Mayor and Commonalty say in their articles of complaint? They say that Exeter was, "of right olde tyme y called Penholtkeyre." To be sure this was at some very distant time, before the Incarnation of Christ; but as part of the argument is that Exeter was a walled city in those days, one would like to know how it came by its name. There is near Exeter a height known as Penhow, the scene of a battle of the tenth century, which seems, like so many other names, to keep the Welsh and the English word for the same thing. The "keyre" in Penholtkeyre suggests the Welsh *caer*, the equivalent of the English *ceaster*. We do not see how Exeter can at any time have been called *Penhowcaer*; but it is possible that it may at some time have been called *Caerpen*. But we should like to know when and how it changed this name for the better known Isca, which has gone on, in one shape or another, ever since. These are just the points which it is surely the business of an editor to look up, and not to leave his readers either to make guesses or to go hunting in libraries. So again, we should like to know where the Mayor found his story about Vespasian and Arviragus, but we quite agree that the Bishop, Dean, and Chapter, when they "seyen that thei doute of Vespasians being atte Excestro and so atte Burdeaux and Jerusalem to sille xxx Jewes hedes for a penny." And they might have added that, whether this cheap sale of Jews' heads was authentic or not, it could not throw much light on the respective claims of the Bishop and Mayor of Exeter. But it should be marked that, while the Mayor maintains that the city, by whatever name, had been a city from the unknown times before the Incarnation of Christ, the Bishop argues that Exeter was only a borough up to the time of the installation of Leofric, and evidently implies that it became a city by virtue of becoming a Bishop's see. This we need hardly say is the definition of a city which has been commonly accepted in England, at least from the time of Henry the Eighth. Yet in our own days the Judges denied the right of Manchester to rank as a city by virtue of its becoming an episcopal see, and the rank of a city was formally given to it by royal proclamation. Both disputants freely appeal to Domesday—"Domus Day," as they commonly call it—appealing to it, for the most part, for things which are certainly not to be found there. Then we should like to know why the Bishop's fee is called St. Stephen's fee, when the dedication of the church is to St. Peter, and we should still more like to know why the Mayor, in one place, calls it "Haroldes fee." The connexion of Exeter with the House of Godwine, and the presence of Gytha in the city at the time of the great siege, are among the main facts in the history of Exeter; but, in the long list of Harold's possessions in Devonshire which is to be found in Domesday, there does not seem to be anything within the city of Exeter besides the mere possession of five houses. If no further reason for the name can be found besides the mere fact of the Mayor calling it so, this is one of the cases in which one would like to be sure that there is nothing to be found out. As for Vespasian, it appears from the same letter that the Chancellor "seide merily" of him; but it does not appear that he said anything about Harold.

In one of the articles there is a curious notice of the now destroyed cloister which stood on the south side of the cathedral nave, and the Mayor and Commonalty complain that they have been hindered by the Dean and Chapter from performing their usual devotions for the souls of the persons buried there:—

> Item the seyde Meyer and Comminalte compleynyth that whar the Dean and Chapiter of the Cathedrall Churche of Seynt Peter of Exceter have a cloyster joynaunt to the seide Cathedrall Churche with ynne the square of whiche cloister ys a voide place y-called "the Praiell," yn the whiche ys comyn sepulture whonne the cymytere standith pollute; thrugh whiche cloyster was a comyn waye for the sayd Maier and Comminalte yn to the said Cathedrall Chirche and the said cloyster a place of praier and devocyon to praie for alle the sawlys was bonys lieth yn the said cloister and prayell atte tyme of dyvyne servyce doyng in the salde cathedrall churche; but now right late the saide Dean and Chapitere the dorys of the saide cloister have stoppid and closid contrarie to the gode usagis of all holy churche, the kynges lawe and the use afore tyme hadde and ayenst al good pollcye.

Mr. Moore gives in a note another version of this complaint from another roll, the exact date of which we should like to know, as it uses the word "cathedrall" as a substantive, while everywhere else it is the "church" or the "cathedral church." To the complaint about the cloister, the Dean and Chapter answer that the cloister

> is within the procincte of the saide Chirch and Cimitery and no comon wey but oute of the jurisdiccon of the saide Mair and Commynalte, which Cloister dores atte all tymes have be shutte except tymes to goo in procession or to the Chapitre House or to the said Library or eny other such resonable tyme; atte which tymes and in especiall in tyme of dyvyne service, ungoodly ruled peple most custumabely yong peple of the saide Comminalte within the saide cloistre have exercised unlawfull games as the toppe, quoke, penny prykke and most atte tenys, by the which the walles of the saide Cloistre have be defowled and the glas wyndowes all to brost, as it openly sheweth, contrarie to all good and goostly godnesse and directly ayens all good policy and ayens all good rule within the sayde cloyster to suffre eny such mysruled people to have comune entre which spare not withyn a quarter of a yer to pollute the saide Cimitery and their saide moder Cathedrall Chirch.

The great dispute of all was about the attempt of the City Sergeant to arrest a certain Hugh Lucas, a tenant of the Bishop, whom the Mayor describes as "the most, or one of the most, mysgoverned man of all the cite of Excetre or of all the shire afterward"; does this mean the whole of Devonshire or only the county of the city of Exeter? But the Bishop, Dean, and Chapter, in answer to "the disclaunder" put upon Hugh Lucas, "seyen that thei know him for no such misgoverned man." The Mayor, on the one hand, complains how divers ministers of the Church tried to slay the City Sergeants with various weapons, as "Sir John Ion with a dore barre"—perhaps, like Bishop Odo's mace, for fear of shedding blood—but others with "swerdis, custellis, long knyvis, and yrysh skenes"—the presence of the Irish weapon should be noticed, and we should like to know more about the "custellis." The Bishop on the other hand complains how

> the saide Hue was furiously dreven into the saide Cathedrall Chirch by officers and other of the saide Citee with swerdes daggers and other invasif wepen ayens the pees drawen, the mynysters of the saide Chirch the same tyme being in theire habits atte divine service, which mynysters as prestes ought to do in all that thei godely myght laboured to save the saide Hues lyf, being in right grete perell therof.

They complain that John Paxton was smitten by a city officer with "custrell," which we take to be the same weapon as one of the "custellis" which in the other account John Panton is said to have used on the other side. This looks like rather careless editing. At all events a little comment is needed. Mr. Moore says in his preface:—

> I regret that I have been unable, for want of leisure, to work out the history of this Correspondence, and those whom it mentions, more fully. That task I must leave to the future student of these Papers.

But we hold that the working out of such things was the proper task for the editor of the papers and not for the student.

THE GREAT DUTCH ADMIRALS.*

THERE have been few wars more bitter and obstinate than that between the Protestant Commonwealths of England and Holland. The Dutch had fought bravely against Spain for political and religious liberty, and now they fought with equal valour against England for trade profits. They struggled to maintain, and we to invade, their position at the head of European commerce. The war which began under Cromwell was renewed under Charles II., and when it ended the naval superiority of Holland had been finally transferred to England.

> What peace can be where both to one pretend?
> But they more diligent and we more strong.

The poet Dryden is here an accurate historian, for he truly states our cause of war against the Dutch. Dryden wrote under the Monarchy, but the same sentiment prevailed under the Commonwealth, as appears from the book before us. "There is no doubt," says the author, "that the Dutch were very smart in their trading." After fighting Spain for eighty years, they made with

* *The Great Dutch Admirals.* By Jacob De Liefde. London: King & Co. 1873.

her not only peace, but a commercial treaty providing that English cloth should be excluded from Spanish markets. Thus English merchants suffered in pocket, and they petitioned Cromwell for redress at the same time that Cromwell was himself displeased at Dutch sympathy with the Royalists. There needed no better reasons for sending forth Blake and Monk on the one side, and Tromp and De Ruyter on the other, to play home and home matches at cannon-balls.

The greatest among the great Dutch admirals was Tromp. Unlike the soldier-admirals of England he was born and bred a sailor. His grandfather was a coasting trader, and his father, whose house was at Brill, at the mouth of the Meuse, took him to sea in his own ship, before he was nine years old. Next year he saw that father killed on his own deck in action with a Spanish ship. He lived to avenge his death. In 1639 he commanded the Dutch fleet which blockaded the Spanish admiral D'Oquendo in the Downs. An English fleet was sent to preserve neutrality, and its commander, Pennington, informed the belligerents that he was ordered to fight the man who fired the first shot. Tromp hereupon invited D'Oquendo to come out and fight; the Spaniard answered that he had no powder, to which Tromp replied by offering half of his own stock. As the Spaniard remained at anchor, Tromp attacked and defeated him, leaving a squadron to watch Pennington, which the English thought a piece of impudence. However, the English of that day were too fond of fighting to object to a battle on their own coast, and Pennington seems to have thought meanly of D'Oquendo for not accepting Tromp's invitation. Three years later Tromp, happening again to be off Dover, landed, and received the honour of knighthood from Charles I. The first battle between Tromp and Blake was fought in the Downs in 1652, and preceded any declaration of war. Later in the same year Tromp defeated Blake off Dungeness. After this victory tradition asserts that Tromp hoisted a broom at his masthead to signify that he would sweep the Channel of the English. But the author questions this story, which he thinks inconsistent with the modesty of Tromp's nature. If he did display arrogance, it was promptly punished. The Dutch Government had been long used to easy successes over the Spaniards, and did not understand that the English were as rough and obstinate as their own sailors. Tromp had vainly warned his countrymen of the danger which his skill and courage proved unable to avert. The descriptions of sea fights which this book contains are all very much alike, and convey hardly any distinct idea. But we learn that a battle of several days began off Portland, and ended with the retreat of the Dutch fleet to Flushing. The apprehensions of Tromp had been confirmed by an unmistakable defeat. One effort more his country made for victory, and the veteran Tromp accepted with heavy heart the leadership of an undisciplined fleet. Everybody looked to him for guidance, and he feared that the Government was putting upon him more than he could bear. "But in any case," he wrote, "he would die an honest man and to the welfare of his beloved country." Monk was cruising off the Dutch coast, and, having become weary of sea fighting, had ordered his captains to make their work decisive. "The taking of ships in a fight," said he, "always weakens the fleet; wherefore, to make short work of it, ye must rather send an enemy to the bottom than take him." Tromp was equal to the English admiral in resolution, and within sight of the village of Scheveningen he began the last of his many battles. The English fought for victory, the Dutch for existence. Both were Protestant in religion and devout in spirit. They had learned in conflict with Popish Spain that naval skill which they now turned against each other. Indeed the animosity between the two nations was so great that if two unarmed fishing-boats happened to meet they would fight with oars and boathooks until one became a prize. In this determined spirit the two fleets engaged. A musket-ball pierced Tromp's heart. He died, and a furious fight raged around the *Brederode*, which had so often borne his flag. Thirty ships perished in this battle, and both sides claimed the victory. We should be willing to believe that the Dutch gained, at so dear a price, a victory; and indeed the bloody honours of the day were nearly equally divided. But the Dutch hastened to conclude peace with a Power by which they were manifestly overmatched. The monument of Tromp at Delft commemorates at once the gratitude and the naval prowess of his country. "He left to posterity a grand example of mastery in naval warfare, of fidelity to the State, of prudence, of courage, of intrepidity, and of immovable firmness." Posterity reading this inscription might own with a sigh that, if a Dutchman of our day possessed Tromp's talents, he must fall far behind his opportunities. The great Dutch admiral is dust, and the naval glory of his country belongs to the distant and half-forgotten past.

The first exploit recorded of De Ruyter is his climbing to the highest point of the church-tower of Flushing in the year 1617, when he was ten or eleven years of age. He was manifestly a ne'er-do-weel, and having, after the manner of the time, undergone frequent whippings without visible benefit, he was now sent to sea. It is a demoralising reflection that many naughty boys have become famous admirals. To the mother's objection that her son would be drowned, a friend of the family answered "Better drowned than hanged." So Michiel, called by his playmates De Ruyter, sailed for the West Indies. The greater part of his early life was passed in trading ships, and although one of the bravest of men he greatly disliked war. He was once taken by pirates who landed him on the coast of Spain, and, having lost all his property except an old suit of clothes, he begged his way on foot through Spain, France, and Belgium. He was a clever trader as well as a bold sailor, and at forty-five years of age he had made a sufficient fortune, and having married his third wife, he proposed to quit the sea and take to gardening. But soon the war with England broke out, and De Ruyter, against his will, became an admiral. He wrote to the Government, "I have beaten about the seas from my very childhood, and braved so many dangers that I would fain end my days in rest," but his merit was too well known. He commanded under Tromp in all his battles with the English, and he succeeded on Tromp's death to that admiral's place in public confidence. Thus when war again broke out with England De Ruyter was appointed to the chief command of the Dutch fleet. His four days' battle with Monk and Prince Rupert furnishes a leading incident of Dryden's *Annus Mirabilis*, 1666. The Prince was absent looking after a French fleet, and Monk engaging De Ruyter was overwhelmed, but fought with his usual obstinacy for two long days. With the second nightfall his hope of succour from Rupert or of success without him had almost perished:—

> Yet, like an English general will I die,
> And all the ocean make my spacious grave.
> Women and cowards on the land may lie,
> The sea's a tomb that's proper for the brave.

In the third day's action the *Royal Prince*, the finest ship in Monk's fleet, struck on the Galloper Sand at the mouth of the Thames, and was there taken and burned by the Dutch. Even the arrival of Prince Rupert did not redress the balance of victory, which finally remained with the Dutch. Evelyn writes that at Sheerness he beheld a sad spectacle—"more than half the gallant bulwark of the kingdom miserably shattered; hardly a vessel entire, but appearing so many wrecks and hulls, so cruelly had the Dutch mangled us." Yet within two months the English fleet was again at sea, and Monk and Prince Rupert now defeated De Ruyter, who was not properly supported by his officers. By a skilful and timely retreat among the shoals with which he was familiar De Ruyter escaped with the loss of only two ships:—

> Oh, famous leader of the Belgian fleet!
> Thy monument inscribed, such praise shall wear
> As Varro, timely flying, once did meet,
> Because he did not of his Rome despair.

Thus wrote Dryden of this retreat. But Dryden's countrymen would have owned that the admiral who defeated Monk deserved a better comparison than this with Varro. Another poet of that time has written that

> He that fights and runs away
> May live to fight another day.

And De Ruyter, having thus saved his ships, afterwards sailed with them up the Medway, battered Upnor Castle, burned the English ships which lay there, and spread terror as far as London.

In a third war between England and Holland the former had France for her ally. The skill and valour of De Ruyter with difficulty resisted these powerful enemies until the English nation grew tired and ashamed of the war. De Ruyter was afterwards sent with a Dutch fleet into the Mediterranean to help Spain against the French. In a battle which the Spaniards left pretty much to their allies De Ruyter received a mortal wound. Thus in his sixty-seventh year died this famous admiral far from the home which he loved so well, and without having enjoyed the repose which he so earnestly desired.

This book contains the lives of seven admirals, of whom all but one were killed in battle. The only exception is the younger Tromp, who died at Amsterdam in 1691, just as he was about to take command of the Anglo-Dutch fleet against the French. In the course of sixty years nine members of the family of Eversen died in their country's service. "I desire," said one of them, "the proper time having come, to give my life for the Commonwealth, as my father, one of my sons, and four of my brothers have already had the good fortune to die on the bed of honour, in various battles with the enemy." The speaker, Johan Eversen, the greatest of the name, was killed in the battle in which De Ruyter was defeated by Monk in 1666. His brother, Cornelis Eversen, had been killed in the four days' battle which De Ruyter gained earlier in the same year. It is a pity that a better book could not have been written upon this interesting subject. There is much vagueness and some flippancy in the book before us. The great admirals Tromp and De Ruyter ought not to be made subjects of the smallest of small jokes. Yet, although the work is not satisfactorily done, we gain from it a tolerable idea of the hardihood, patriotism, and simplicity and purity of life of these heroes of the Dutch navy. They all seem to have been great favourites with the English when the two countries were not at war. Tromp, as we have seen, was knighted by Charles I., and De Ruyter was pressingly invited to the Court of Charles II. But De Ruyter preferred the quiet of his own garden to the splendour of a palace. It may seem strange that these Dutchmen should love so dearly such a miserable country; but they had conquered it from the sea and from the Spaniards, and had enriched it with the produce of every country and people of the world. The whole effect of Dutch naval history is melancholy, for all the great deeds of the great admirals could not prevent, although they delayed, the transfer of maritime empire, and with it of colonies and commerce, from Holland to England. The foundations of the vast fabric of British power in the East could not be laid until Blake and Monk had taught our seamen to contend successfully with the Dutch navy. To "old George," as the London mob fondly called Monk, belongs specially the

praise of having carried his country's flag beyond the turning point of fortune. At the end of the year 1666 the substantial victory was with England, nor could a less firm mind than that of Monk have brought the struggle with De Ruyter to a prosperous conclusion. To the mastery thus hardly won in war, superiority in trade was naturally added. Bloody battles in the Channel opened peaceful access to the Indian Seas, and once more the poet teaches history:—

> Thus to the Eastern wealth through storms we go,
> But now, the Cape once doubled, fear no more;
> A constant trade-wind will securely blow,
> And gently lay us on the spicy shore.

UNORTHODOX LONDON.*

DR. DAVIES is, or was, a clergyman of the Church of England with no strictly clerical duties. He turned to account what may seem to have been the defect of his position by sallying forth Sunday after Sunday, and also occasionally on other days, to examine the different phases of religious life in London, with a view to communicating the results of his examination to the world by means of the *Daily Telegraph*. He was engaged in this work more than two years, during which, so far as we can see, he did not argue much on the subject of religion either with the members of the several religious communities or with himself. His first duty was to use his eyes and ears at public ministrations; he also asked questions, obtained answers, and put the results of inquiry into a popular and agreeable shape. With regard to other people, he did not, like Socrates, attempt to teach them by the interrogative method; and for himself, he seems to have let facts speak and give him whatever lesson flowed inartificially from them. A clever barrister can throw opinion into the form of narrative, and state his own case while apparently giving a bare relation of what has happened. Facts, if previously sorted, may in like way produce a consistent impression on the mind without the aid of an advocate, and we cannot be surprised to find Dr. Davies indirectly confessing that, having begun his inquiries in a somewhat broad frame of mind, he has closed them in one still broader. Had he gone regularly to his parish church every Sunday during the two years, the result might perhaps have been different, though there is no telling what might have happened. Among the religious communities to which Dr. Davies applied for information, there were two who declined to give it on the ground that they did not wish for publicity. These were the Irvingites and the Positivists. We should infer from this circumstance that the chance of great expansion is comparatively small in the case of either of these bodies. They have allowed their opinions to be so accessible in print that they can scarcely have a strict *disciplina arcani*; and when there is neither a secret to be kept nor persecution to be feared, the adherents of a belief that is capable of being popular have seldom any sufficient motives to hold them back from the active search for proselytes.

Dr. Davies has naturally taken a wide range for his researches. For his special purpose he counts everything unorthodox that cannot be included within the Church of England, and he looks on some of the most vulgar forms of spiritualism as phases of religious life. To adopt his own metaphor, he has wandered from the North Pole of Nonconformity to the most torrid regions of Romanism. He began his researches at South Place Chapel, Finsbury, where religionists of the destructive school rejoice in the wreck of opinions as a preliminary to clearing the ground, and are half inclined to canonize Voltaire. Before his labours were closed, he found himself once more at Finsbury Circus, but in a spiritual atmosphere wholly unlike that in which Mr. Moncure D. Conway moves while directing the aspirations of "the chief Free Theistic Society in London." The Greek Church in London Wall, though a close neighbour to South Place Chapel, Finsbury, represents a form of belief and worship which throws Archbishop Manning, as he ministers at the Pro-Cathedral at Kensington, into the position of a modern and revolutionary innovator. Going still further up the stream of time and of ideas, Dr. Davies investigated the service of the Synagogue; and here too he was met by the same phenomenon that occurs in all religions which have life enough in themselves to bear varieties of development—the opposition between the school of tradition and that of reason. But he never found himself in a stranger place than when he was spending a Saturday afternoon with the Seventh-day Baptists in Goodman's Fields. These delightfully inconsistent people accept the New Testament, but prefer the Jewish Sabbath to the Lord's Day, and think that a fragment of the law remains unmoved, and for practical purposes unburied, though the whole current of Christian tradition has swept boldly over it ever since the Resurrection. In London they have a little chapel and a less congregation, buried in one of those quaint corners which sometimes, in great towns, imitate the solitude of the country. To make them still more anomalous, these advocates of the perpetual obligation of the Fourth Commandment literally understood, while they are dying out in England, are a body of some small importance in America, and their minister, when Dr. Davies visited their retreat, was an aged man of antiquarian tastes, with much learning and a decided tendency to rationalism. He is since dead, and we know not who now fills the place of the scholar who thought in Latin, said his prayers in Hebrew, and read the New Testament in the original Greek; who explained to six men, five women, and three children the mysteries of the dimidiated Vau; who criticised freely our Lord's applications of the Old Testament, and was so curious in translation as to insist on making Him say, not "Bring me a penny," but "Fetch me a denarius."

Among uneducated and half-educated people the taste for allegory is much more developed than that for criticism; and Dr. Davies met with some remarkable specimens of the allegorical vein. He once searched out the sanctuary of the Walworth Jumpers, which was for the time an arch of the London, Chatham, and Dover Railway. The distinguishing opinion of the sect is that its members will never die; their belief is supposed not only to do away with previous sin, but to exempt them from bodily death. Their minister on the occasion in question was a woman from Suffolk, who, having undertaken to explain the raising of Lazarus, maintained that he was, by anticipation, a Walworth Jumper, and was not really dead when he was laid in the grave. But the whole transaction was typical. Lazarus, who was supposed to have been four days dead, typified the people who died before the Mosaic dispensation, four thousand years previously; Martha signified the Law, and Mary the Gospel. When Dr. Davies was bent on studying the Particular Baptists, he went to their chapel at Notting Hill, and sat under the editor of their distinctive periodical, the *Earthen Vessel*, who, when treating of Elijah's sacrifice on Mount Carmel, explained that the altar repaired by Elijah was Christ's humanity; the dust, stones, and water around it were our sins; the fire came down and took them away. It was more natural for a Swedenborgian preacher to make a spiritual application of the Scriptural account of creation, by showing that every Church went through seven stages of progress, analogous to the six days of Creation and the Sabbath. As a general rule, the sermons heard by Dr. Davies were not very strongly tinctured by the peculiar opinions to which the preachers were pledged. The ordinary type of Dissenting service prevailed, and, with it, the ordinary type of Dissenting doctrine. It is curious to observe how much sooner those communities which are founded on a belief in some new and special revelation ripen into forms and ceremonies than those which confine themselves to the attempt at reproducing the Church as it is described in the New Testament. The "Bible Christians" seceded from the Wesleyan Methodists some sixty years ago; and the cause of their secession was that one O'Bryan, who aspired to be an Evangelist, was considered by the connexion ineligible on the ground of his being married. The separation has not affected their form of service, which is still, to the uninitiated, simply Methodist. The Sandemanians are principally known among us as the religious body to which Faraday belonged; they separated from the Scotch Kirk in the earlier part of the eighteenth century, in consequence of a decision on a point of abstruse doctrine made by the Scotch Ecclesiastical Courts in a sense unfavourable to John Glass, a minister of the Kirk, and his son-in-law, Robert Sandeman. The present worship of the sect aims at absolute fidelity to New Testament practice, and the result is cold, depressing, and disheartening to the last degree. The case is different with the Swedenborgians, whose great authority, Emmanuel Swedenborg, first received his supposed illumination in London, where he died in 1772. This body admits in ritual a close approximation to the service of the Church of England; and its affinities to Spiritualism may lead to further and fuller ceremonial developments, if we may judge from the history of a community whose origin is not altogether dissimilar. The world at large insists on giving the name of Irvingites to the worshippers who lay some special claim to the high title of the Catholic and Apostolic Church, and rejoice at their church in Gordon Square in a grand, elaborate, and highly eclectic ritual. It is not from the eloquence and earnestness of Edward Irving that they have derived the impulse which has so quickly developed into ceremonial richness and fulness, still less from the doctrinal opinion which brought down on him the censures of the Kirk. Irvingites would, in all probability, have run the same course as Sandemanians if the relations of the two bodies to their respective leaders had been the same. But the Sandemanians looked back from John Glass and Robert Sandeman to the New Testament, while the Irvingites, in their endeavours to restore the Apostolical organization to the Church, have received a far weaker impulse from Irving or the New Testament than from the supposed voice of recent prophecy.

If there is any society described by Dr. Davies that might fairly object to being regarded as unorthodox from the standpoint of the Church of England, it is that of the United Brethren, or, in common parlance, the Moravians. They have been recognized by Act of Parliament as a Protestant Episcopal Church, and are separated from churchmen of the Evangelical type not by doctrine, but by a discipline which they maintain as useful to themselves, though not as essential to others. If we look at their past history, some of its passages are almost like a romance; and their liturgy, with its elaborate litanies, its clear recognition of the sacraments, its formula for episcopal ordinations, its systematic arrangement of doxologies, its free admission of the musical element, at once lifts the community, on paper, to a dignity above that of an obscure and struggling sect. We may therefore be rather surprised at learning from Dr. Davies that the Moravians, though distinguished elsewhere as missionaries and educators, number only one hundred and fifty communicants in London and the neighbourhood, and are amply accommodated by

---

* *Unorthodox London; or, Phases of Religious Life in the Metropolis.* By the Rev. C. Maurice Davies, D.D., formerly Fellow of the University of Durham. London: Tinsley Brothers. 1873.

a single unpretending chapel. The description he gives of their services, though perfectly good-natured, shows that they did not excite in him any enthusiastic feeling. It happened, indeed, that when he went in the afternoon to the chapel of the Moravians in Fetter Lane, he hoped to hear a sermon relating more or less to an interesting event in their history, of which the day happened to be the anniversary; but he heard, to his disappointment, a discourse on the Stockwell tragedy. On the other hand, he was evidently much pleased by the cheery and hospitable demeanour of the old lady who acted as pew-opener. It may be said generally that Dr. Davies tries to catch the best side of the people whose portraits he takes; he has considerable power of observation, and a fair amount of quiet humour, which, working together, enable him to hit off peculiarities with sharpness and clearness, but also with a palpable absence of ill-will. One reason why his papers as now collected read so much better than might have been expected from the circumstances under which they originally appeared, is found in their almost uniform candour and fairness. We must not respect him the less because his book makes it probable that, of all the preachers of either sex and every persuasion he came across, Dr. Cumming was to him the most provoking. He does simple justice to the orator of Crown Court whether preaching the Millennium in his own chapel or lecturing on the future of Europe at Myddelton Hall, Islington; and, in this case, simple justice is severity. Dr. Cumming is described as taking in his sermon a Broad Church tone, qualified by many narrownesses; and as advocating a comprehensive charity, from which, however, he excluded in the course of his remarks Hindoos, Mahometans, Roman Catholics, the wearers of copes and dalmatics, the frequenters of confessing-boxes and cathedrals. At the lecture—but who will care now to hear an analysis of Dr. Cumming's attempt at prophecy in connexion with the outpouring of the Seventh Vial? Dr. Davies gives a strange account of the manner in which Dr. Cumming talked round his subject without throwing any light on it; and his account, we fear, is not more strange than true.

DISCIPLINE IN FOREIGN ARMIES.*

THE War of 1870-71 is fruitful of lessons in many ways, but in none perhaps more strikingly than in its illustrations of the value of good and real training, and of the hopelessness of looking for exertion under difficulties from bodies of men who have not the confidence in their leaders and their fellows which discipline gives. What this confidence is can be more easily understood than defined, for it is a moral quality strictly, as little communicable by the petty terrorism of the martinet as by the loose handling with which the officer of a civic corps treats his fellow-burgesses on their holiday parade. Martinets we have had in plenty in our own forces; we have specimens of them left still. And no one who knows the British army will pretend that a battalion commanded by one of these tyrants in miniature is one whit more to be trusted for real fighting than any other regiment taken at random from the Army List. But it is not our purpose here to speak of our own service. It has its own peculiar national spirit and organization, and, however these may have been at times abused, and however low and rough the strata of society which are searched for recruits, want of discipline has never been our reproach, nor want of that good feeling between men and officers without which the least reverse that an army encounters brings with it the worst perils of defeat. Our present object is to gather up what we have lately heard of other armies in respect to this essential quality.

General Trochu, whatever his failings in action, and however much he may have been moved by self-seeking when he wrote, yet deserves of his countrymen the praise of having been the first to tell them plainly the evil condition of the army of the Second Empire. Baron Stoffel's famous Reports read like a commentary on the text which Trochu gave. Had these been studied by the men most concerned, they would at least have been spared the unpleasant surprise which they felt when the first order for retreat—as in the famous instance of Douay's corps near Belfort—gave the signal for disorganization. Indiscipline, however, such as that of the French of 1870, does not show itself when all goes on prosperously. Reverse is the touchstone of the smartly dressed and ill trained soldier. Reverse, too, plainly reveals those vital defects in the organization, material or moral, of an army, which lie unnoticed by commonplace administrators in the smooth days of peace.

When we look closely into the history of the French armies of 1870, Imperial and Republican, we are struck by the helplessness which the officers in command almost invariably showed in presence of disorder among their men. Various explanations are given of the causes of the demoralization which paralysed whole corps at a time; but hardly one of the writers on the defeats of the French appears to suggest that there might have been found a prompt remedy for the evils admitted. The single exception to be found to this remark is in General d'Aurelle de Paladines's history of his own campaigns. And as it is notorious that the raw troops of that commander, though brought together under every possible disadvantage, were got in hand by him with a rapidity nowhere else equalled, and were kept in such order under trying circumstances as reflects peculiar credit on his *régime* when contrasted with what went on about Sedan and Metz and Paris, a special value attaches to that part of the General's interesting work which explains the particular means by which he worked. This was not, as he is very careful to tell us, his own moral power of command or inflexible strictness; but simply such a change in the military code of France as to fit it to the real exigencies of field service undertaken by raw or disordered troops. To speak briefly, the ordinary red-tape system of the *Conseil de guerre*, or Standing Court-martial, by which discipline is usually enforced on the French soldier, is wholly inapplicable to the emergencies of war. Under it the offender must be in all cases regularly reported by those immediately above him to the general of division, who refers the matter to a *capitaine rapporteur*, fulfilling the functions nearly of our Deputy Judge Advocate, and decides on any further proceedings according to his advice. This method may answer well enough for troops in a garrison or standing camp; but it is altogether too slow to meet cases of crimes committed on the line of march when the enemy is at hand. The delays and formalities enjoined become then simply the means of defeating justice, or, at the best, of hindering the moral effect which the swift and severe punishment of the transgressor in the presence of his comrades surely has upon the latter. Readers of the work of General d'Aurelle will probably learn with some surprise that the General not only claims no personal credit for the severity of discipline which distinguished his command, but shows expressly that it was the direct and natural consequence of the introduction of a method of trial suited to the circumstances, and that the change was made before his appointment to command, by the members of the Delegate Government at Tours on their own responsibility. Under their decree, which is cited at length in his appendix, and dated the 2nd October, some days before the arrival of Gambetta, the *Conseils de guerre* were for the time altogether superseded by *Cours martiales*, or improvised courts, of which any officer commanding a separate body of troops, however small, could summon one on the instant, being bound to see that the sentence was carried into execution the following morning before the battalion to which the delinquent belonged left the ground. It was provided indeed that a field officer should preside, and of the five members one was to be a non-commissioned officer of the company to which the accused belonged. This last condition, however, would not serve to screen an offender, as a bare majority of votes, taken privately, decided as to the guilt and adjudged the punishment.

Readers who are acquainted with our own military code will discern at once, in the *Cour martiale* authorised by the decree of Admiral Fourichon and his fellow-delegates, simply an adaptation to the French service of the Detachment General Court-martial of our own Mutiny Act, known vulgarly as a drumhead court-martial. And they will naturally wonder, if they have studied the records of past retreats, or of any other of those episodes of war which unloose the bonds of ordinary discipline, how the French could have expected, without some such rough and ready remedy, to meet those cases of disorder which demoralization was sure to bring with it. The answer is partly no doubt that here, as in all its other portions, the military system of the Second Empire was framed wholly with a view to success. No provision was anywhere made for defeat. But it must be added that in the Grand Army of the First Napoleon, which was the declared model of his nephew's forces, the unwritten powers of the chiefs of corps were so great, and were wielded generally by such vigorous hands, as to supply through the rude agency of the Provost-Marshal much of that discipline without which the first sound of check or retreat turns an army into a mob of dangerous stragglers. Where such vigour was wanting, it would be easy to show from the records of 1813 that the need of a prompt martial administration was felt as much then as in 1870. And whatever may have been the faults of the Delegate Government of Tours, it at least deserves the credit of taking the first practical step towards doing away with what is really the national reproach of the French soldier—his insubordinate conduct under the least adversity.

It was the want of any such measure at Paris which from the first proved fatal to any real activity in the defence of that capital. On this subject it is unnecessary to go into long details. General Trochu has thought fit to condemn himself before the world in his published justification, no reader of which can fail to see what manner of man was this governor who snatched at brief authority and used it not, who insisted on the chief place in the defence, yet made not one attempt to check the "disorder," the "excursions to a distance," the "pillage" carried on by one part of his forces, the "demoralization" of another, or the "insubordination" of a third—all of which are mentioned expressly by him. It is not worth while to argue on the facts of Trochu's case. It is enough here to state the obvious truth, that his neglect to introduce discipline, even into the actually embodied part of his troops, made his failure at all points certain beforehand, and left the German task at the least far easier than the most sanguine of the staff could have anticipated.

It is a strange omission in the valuable work which Colonel Newdigate has introduced to English readers that the working

The Army of the North German Confederation. By a Prussian General. Translated by Colonel E. Newdigate. London: King & Co.

L'armée et le service personnel. Brussels: Lebègue.

in the German army of what may be called its war discipline is not treated of. In considering this, however, it is necessary above all to understand that the German officer occupies a different position altogether towards the privates from that filled in other armies. He is not only raised above his men by a barrier of caste more difficult to pass than among ourselves, but he is their patron, guide, and instructor. He sees to their arms and clothing, puts them personally through every part of their military exercises, and teaches them reading and writing when necessary. "The company officers," says the Prussian General, "occupy themselves almost continually with their men. These two classes are brought into very close personal relations, without prejudice to discipline, rather with a contrary effect. The scholar clearly sees the labour for which he has to thank his teacher, and requites it by an attachment which fails to exist where the officer keeps himself at a distance from his men." This panegyric may be a little overstrained perhaps, and it is certainly true that the German army has not been tried by the touchstone of adversity. But it may be easily understood that the peculiar relations created by the system here eulogized would allow of the use of a code of iron severity in time of difficulty, without much fear that its provisions would be needlessly or carelessly applied. In success such a code will, under like conditions in the system, slumber unused; and hence the belief with which some critics of the Germans are inspired, that their martial law, as regards their own men, is singularly lenient.

If we notice, in conclusion, the sharp controversy that has arisen in Belgium on the question of military obligation and the treatment of the soldier, it is but to point to that peaceful little country and its sharply criticized army as one instance of the extreme unpopularity of the former model force of Europe—the gilded but rotten military machine which broke down in 1870. A well-known pamphlet, which paints vividly the inefficiency of the Belgian troops if unreformed, dwells chiefly on one error, the having copied the French in their system of service by substitutes. This the writer declares has hitherto ruined the army. And the reason of the weakness of both model and copy is obvious. The discipline is first lowered to meet the case of a force in which the best citizens are to be enrolled without finding a short service unendurable. And when this has been done, the practice of putting in paid substitutes at high bounty fills the ranks with the very dregs of the labouring class, for whom at any rate a strict code is a necessity, if the business of war has to go on. Neither France nor her little neighbour seems as yet to have discovered the secret that for soldiers without education or high moral sentiment a stern and prompt military code is absolutely essential, as it is desirable in any case that the commander of an armed force should possess it for use at need.

Did we wish to enforce the moral at home, it were only necessary to point to the consequences of the suspension of our well-digested and practical military law by the fancies of Sepoy officers in the last generation. It was that which paralysed our arms for a time in the dark hour when Elphinstone's force perished in Afghanistan, and which allowed the Mutiny of 1857 to gather head at a hundred points, owing to fatal ignorance on the part of our own native troops of the sharp severity with which the first motion of military insubordination can be met in our service when occasion unhappily arises.

POPE'S ILIAD IN LONGS AND SHORTS.*

ALTHOUGH this translation is published without introduction or preface, it is not hard to guess the secret of its origin. To a mind early imbued with scholarship there is no better anodyne for the importunity of professional cares and the disquietude of political conflicts than an almost mechanical recourse to the delightful exercise of composition. To the weary brain of a hard-working man the manufacture of a dozen elegiacs is as soothing as "counting tens" is to the wakeful schoolboy. It is not long since we welcomed from the same scholarly hand a version of Gray's *Elegy* in Greek elegiacs, and we can hardly be wrong in assuming that this experiment of turning Pope's heroic couplets into Ovid's hexameters and pentameters represents the solace and relaxation of a busy and anxious period in the life of a Q.C. and an M.P. Scholarship may be a great ornament to the judge on the bench, but we doubt whether, for his own sake, it is not a more enviable possession to the hard-worked barrister whose labour it lightens and relieves:—

> To boyhood's happy tasks revert the eyes,
> And con the book that made its earliest prize.

It would perhaps strike few persons at first sight that Pope's conversion of Greek hexameters into English heroic couplets afforded the best field for an experiment of the kind which Mr. Justice Denman has undertaken. And yet a closer examination, or, better still, a practical testing of the matter, will affirm the wisdom of such a selection. What Ovid would have had to undertake, had he been minded to remould passages of the Iliad or the Odyssey into the elegiac shape of his Epistles or his Fasti, Pope has performed in breaking up the Homeric verse into couplets, and in limiting to fixed lengths clauses and sentences which in the original had no such limit. There is, too, in Pope's couplet something very congenial to the elegiac form, as we know from early conversion of his Pastorals and his "Windsor Forest" into longs and shorts. Moreover the matter of the Iliad accommodates itself in a still more kindly manner to Ovid's metre and directness. Mr. Justice Denman has set himself the task of translating, not Homer, but Pope's Homer, into elegiac couplets, and he manifestly aims at rendering his model into like lengths of Latin verse with a literality certainly not caught from his exemplar. It is wonderful to what a degree the result proves the feasibility of the undertaking. Often Ovidian in the tone, style, and finish of his verses, the translator has rarely failed to produce an impression that his elegiacs might have been the work of some one of Ovid's countrymen who was fond of Greek themes and of the metre of Callimachus. His verses are especially Ovidian in their simplicity of construction, and are almost entirely exempt from that bane of modern imitations, an involved syntax and a resort to *ambages* where there are none in the original. The characteristic intelligibility of all that Ovid has left us in couplet form is a charm which the translator in this instance has been singularly successful in preserving. If this volume were circulated among the youngsters of the fourth or lower fifth form to give them a few wrinkles as to the adaptation of the Latin language and idiom to the phraseology of such a poet as Pope, and to inspire them with a zeal to acquire the knack of turning Ovidian couplets, we should not despair of a reaction in favour of the old classical ways. The sciences may be acquired later, but the schoolboy's task should be the acquirement of scholarship, style, and method; and in this it is impossible to exaggerate the usefulness of composition.

How thorough Mr. Justice Denman's early training was in this respect is seen in the skill which he has at call, after what he would probably designate a quarter of a century's rusting. When we read his version of such passages of the opening book of Pope's Iliad as the plague let loose at the bending of Apollo's bow (61–70), the wordy war of Achilles and Agamemnon, Nestor's persuasive counsels, the oracles of Calchas (whom the translator by an excess of deference to Pope miscalls Chalcas), the lustration of the host, or the glimpse of Olympus which winds up the day, it seems as if a new and smoother way had been discovered for us to enjoy at second hand, yet still with a classical relish, some of the fascinations of the great epic. How easily the metre lends itself to words of counsel and wisdom, and how deftly the translator adds the point and antithetic force of the Latin in his work of conversion, may be seen from this extract of the answer of the seer to Achilles (101–6), which in fairness we must quote in English as well as Latin:—

> For I must speak what wisdom would conceal,
> And truths invidious to the great reveal.
> Bold is the task, when subjects grown too wise,
> Instruct a monarch where his error lies;
> For though we deem the short-lived fury past,
> 'Tis sure the mighty will revenge at last.
>
> Quæ fari cogor, prudentia condere mallet,
> Cogor enim magnis invidiosa loqui.
> Heu! nimium sapiens, facili non fungitur ille
> Munere, qui regum crimina nota facit,
> Namque fere ira manet quæ præteriisse putatur,
> Quique nocere potest, ille nocere solet.

It would be difficult to mend anything in this translation. Another test-passage which we may single out is the oath of Achilles on his sceptre, a passage the original of which Virgil and Valerius Flaccus only partially succeeded in imitating, and which is briefer in the Greek than in Pope's expansion. It is to be borne in mind that our translator is translating the latter (vv. 310–24):—

> Now by this sacred sceptre hear me swear,
> Which never more shall leaves or blossoms bear,
> Which, severed from the trunk (as I from thee),
> On the bare mountains left its parent tree;
> This sceptre, formed by tempered steel to prove
> An ensign of the delegates of Jove,
> From whom the power of laws and justice springs,
> (Tremendous oath, inviolate to kings):
> By this I swear when bleeding Greece again
> Shall call Achilles, she shall call in vain.
> When flushed with slaughter Hector comes to spread
> The purpled shore with mountains of the dead,
> Then shalt thou mourn th' affront thy madness gave,
> *Forced to deplore, when impotent to save:*
> Then rage in bitterness of soul, to know
> This act has made the bravest Greek thy foe.
>
> Per sceptrum hoc sacrum jurabo (testis et ipse es),
> Cui novus haud crescet flos, fulminve novum;
> Quod ligno abscisum proprio (nostri omen amoris)
> *In sterili arborea monte reliquit aves;*
> Per sceptrum hoc ferro cælatum, nobile ut esset
> Insigne imperii quod Pater ipse dedit,
> A quo Justitiæ et Legum est divina potestas;
> (Terribile hoc dictu; nec violanda fides—)
> Nempe per hoc juro. Si quando saucia Achillem
> Græcia ad arma vocet, vox ea vana cadet.
> Litora cum crebris jam cadibus ebrius Hector
> Straverit aggestis rubra cadaveribus;
> Tum deplorabis quem inflixeris ipse dolorem
> *Quæque tenere nequis, perdita flebis inopa.*
> Tum miser angeris, luctu furibundus amaro,
> Quod Graiorum ex hoc optimus hostis erat.

We cannot too highly commend the skill with which the fourth and fourteenth verses of this extract have been turned. The manner of Pope is represented by the neatness and point of the Latin equivalent, and the general effect is extremely good. If

---

* *The First Book of Pope's Homer's Iliad.* Translated into Latin Elegiacs by the Hon. George Denman, M.A., formerly Fellow of Trinity, Cambridge; now one of the Judges of the Court of Common Pleas. Cambridge: Deighton, Bell, & Co. London: Bell & Daldy. 1873.

we might suggest a change, it would be in regard to the last line, which is literal enough as a translation of Homer's words, but scarcely so perspicuous or elegant as the rest. The meaning of "ex hoc" strikes us as vague. The alternative which we hasard is not so literal, and may sin in point of elisions, but we offer it as a hint for something better:—

Quod nostro infensi hinc Gracia Marte caret.

Glancing back for a moment at the close of one of Agamemnon's speeches dressed in the rhetoric of Pope, it is worth while to see how well it has been rendered by the translator:—

But since for common good I yield the fair,
My private loss let grateful Greece repair;
Nor unrewarded let your prince complain,
That he alone has fought and bled in vain.

Sed quia communi concessa puella saluti est,
Privatam reparet Grecia salva malum.
Nec regi vestro justam prebete querelam,
Vulnera quod soli sint sine dote Duci.—151-4.

Again, Thetis's lamentation over the coming fate of her hero son, beginning—

So short a space the light of Heaven to view—

is so well turned that a reference will repay the trouble:—

Tam breve cui spatium est ævi, cui tantula lucis
Pars data, num tantus debuit esse dolor?
Ah! si quid matris cura officiosa valeret,
Jam procul Iliaco litore vela dares;
Jam procul a castris malles vitare pericla,
Quæ proli impendent ah! propiora meæ.—545-50.

Nor are the descriptive couplets less satisfactory, take them where we will. Here is an aspect of the hecatombs and sacrifices:—

The sable fumes in curling spires arise,
And waft their grateful odours to the skies.

Spiris fuligo picea torquetur in auras,
Gratus et ascendit flamine vectus odor.—417-8.

And here is a glimpse of Vulcan out of his element:—

Vulcan with awkward grace his office plies,
And unextinguished laughter fills the skies.

Mulciber inculti carpit Ganymedis honores,
Et risus superos immoderatus habet.—771-2.

Again, an exquisite couplet, a few lines further, has full justice done to it in our author's Latin:—

Apollo tuned the lyre; the Muses round
With voice alternate aid the silver sound.

Pulsat Apollo lyram, circumstantesque Camenæ
Vocibus alternant dulce canoris opus.—775-6.

Nor would it be hard to string together a dozen or two of pentameters as satisfactory as

Me, cui non fraudi Troja remota fuit

The distant Trojans never injured me.—200.

In fact, Mr. Justice Denman may be said to have established the suitableness for conversion into Latin elegiacs of a class of poetry rarely thought of for such uses. And in doing so he has paid a graceful compliment to the constraining attractions of the Latin Muse, whom he has so long had to neglect for the severer courtship of Themis. Had he grown ever so rusty, what scholar could have imputed blame, knowing the exacting nature of his later labours? Here, however, there is next to nothing that could be improved. We would submit that in v. 722 there stalks abroad a doubtful perfect of "quatio":—

Atria cœlorum quod modo *quassit* erat.

We cannot find "quassi" in Smith or Facciolati, and though "As in Præsenti" is a drill of the past, we have still a reverence for its oracular saw—

Et *quatio*, *quassi*; quod vix reperitur in usu.

For "O, cujus Chryse," in v. 56, we should be disposed for clearness' sake to read "Cujus Chryseum"; and in v. 494 there seems to be a misprint of "tenet" for "negat." In the couplet (245-6)—

Namque ego præclaram nitidis Briseida ocellis
E castris rapiam quæ tibi sacra putas—

the construction and dependence of the relative clause is rather ambiguous. If it has any warranty in the English, it must be the word "prize," for which it may be a periphrasis. But then the neuter, as it were in apposition, is awkward, whereas if, as in natural sequence would be the case, the antecedent to "quæ" is "castris," then the relative clause is purely redundant. A comma at *rapiam* would make the sense clearer. Not that the translator is elsewhere chary of punctuation. When, as we hope he may have to do, he prepares a new edition, he may safely excise three commas in every five. Without justifying the lengths to which Mr. Justice Denman's class and bracket-fellow, Professor Munro, would have gone some time ago in getting rid of stops, we should have no hesitation in sweeping away three commas out of four in the line which in the translation before us groans with over-punctuation; as follows:—

Non tua, sed mea, et est, et erit tua nata, sacerdos;

where we should strike out all except that after *nata*. In closing our remarks upon an effort of scholarship worthy of the Judge's Cambridge laurels and his hereditary gifts, we hope that he may long have health, leisure, and inclination to continue his addresses to the Muse.

THE DEATH SHOT.*

In Captain Mayne Reid's story of *The Death Shot* we have the explanation of a picture as offensive as it was large which, some months ago, was exhibited on the walls of many of the railway stations. Our readers may remember a huge head of a man who was buried in the ground up to his neck, round whom wolves were prowling and birds of prey were swooping. No doubt, like the illustrations in the *Police Gazette*, it was a good advertisement, and likely to attract a certain class of readers. No less at the same time was it a miserable piece of workmanship, and an outrage on all good taste. There should be a certain limit in the art of puffing a new book, and this limit was surely passed in that horrible picture which was thrust before every one's eyes in the most public of places. If a man chooses to fill a book with offensive descriptions of human suffering, he has surely no right so to make them public that one must, however much against one's will, be ever coming across them. There is a cruelty moreover in the exhibition of such pictures as the one we are talking of; for it is impossible to form any guess as to the amount of suffering which they may cause to children who are blessed or cursed with minds as imaginative as they are sensitive. Captain Mayne Reid's great rival in horrors, Madame Tussaud, has the discretion to gather them all together into a separate chamber, and, so far from making them what he calls The Prologue to the exhibition, puts them right at the back. This Prologue, no doubt, is meant, like the illustration, to whet the reader's appetite, and by raising a strong curiosity about this "singular spectacle—one full of weird mystery," as the author calls it—to lead any one who chances to pick up the first volume to ask for the second and third. For it is not till towards the end of the story that the reader can make any guess as to who it is that is thus buried alive. It was so extraordinary a position for a hero to be placed in that we had made up our minds that it was one of the scoundrels in whom this book abounds. It was some relief to us to find, however, that it was the hero; for, as there was a heroine whom he had rescued but a few hours before, waiting for him to marry, and as there was the villain of the piece for him to kill, we felt quite sure that Captain Mayne Reid would, at the exercise no doubt of some self-restraint, have to keep the wolves and the vultures from having a whole chapter to themselves in which to make a meal of him. The author would have shown more tenderness for his reader's feelings had he followed the advice of a rival inventor of prologues. Changing Bully Bottom's words a little, we would have had him say, "We will do no harm with our coyotés and vultures, and the head of the man is not eaten indeed." It may be, however, that, after a course of sensation novels, ladies have become less soft-hearted, and that, so far from not being able to abide the drawing of a sword, they call, in their books at least, for all the horrors which went to make up a Roman holiday. Though in this one respect Captain Mayne Reid's prologue differs greatly from that which Bottom proposed and Quince spoke, yet in point of composition there is but little to choose between them. They are written, to be sure, in very different styles, the advantage lying perhaps with the Athenian carpenter. A nineteenth-century Bottom, if he, and not Quince, had had to compose a prologue, might likely enough have composed or roared in some such way as the following:—

Strange spectacle! The head of a man, without any body—set square upon the ground; with eyes in it that scintillate and see, a mouth that opens and shows teeth; a throat from which issue sounds evidently of human intonation; around this object of almost supernatural aspect, a group of grey wolves, and over it a flock of black vultures!

It is a pity that Captain Mayne Reid, in writing these stories of the wild life of North America, should not have been content to follow in Cooper's track, but should have striven to unite all the horrors of the backwoods with the almost greater horrors of what is called the sensational style. To be buried alive or to be scalped is horrible enough, but to be buried alive or to be scalped in doubtful English is more than the nature of man can bear. Captain Mayne Reid has a certain power of inventing those almost desperate situations and hairbreadth escapes in which we all of us at one time or other have delighted. He understands very well what may be called the legitimate business of the "Romance of Forest and Prairie." He knows how to have heroines run away with, and to keep heroes in hopeless captivity for the proper number of pages, till it is the right time for the backwoodsman or the grateful Indian chief to show off his craft, and, by first tracking and then shooting down the villains, to make every one happy in the end. Though in his earlier books he was fond of words almost as big as those "Herculean" backwoodsmen in whom he delights, he was as yet free from that odious style which he has apparently caught from writers far inferior to himself. Now his books present the strangest of mixtures, being a medley of Yankee English, negro English, "sensational" English, with a little French, and a plentiful scattering of Spanish phrases. Not only do the eyes of Clancy, the hero, scintillate when he is buried up to his neck, but the villain's eyes, on an earlier occasion, have an "angry scintillation," which "told that Clancy's life was in danger." As he treacherously fired upon him, "Clancy's eyes, flashing angrily, interrogated the forest." Unhappily the interrogation does not lead to much profit, for the wicked Darke gets another chance of firing, and, addressing him in italics, says,

* *The Death Shot: a Romance of Forest and Prairie.* By Captain Mayne Reid, Author of "The Headless Horseman." 3 vols. London: Chapman & Hall. 1873.

"Now, take your *death-shot*." This communication must have been in writing, though, as it is made in a scuffle in a forest, we can scarcely tell how; for the author adds, "as he saw (*sic*) the words, a fiery jet streamed from the left-hand barrel." The poor hero is shot at only the forty-third page of the first volume, and is left for dead, "the sulphurous smoke forming a nimbus around him." The villain, thinking that his rival will trouble him no more, at once makes off for the heroine, but comes upon her in an unfavourable moment, at a time when "the coruscation of the firefly has a response in flashes less pale than its own phosphorescence—sparks from the eyes of an indignant woman." The unfortunate heroine, though she escapes from the villain for this time, at last comes again into his power by the means of another villain, whose "glance inspired fear, such as one feels while being gazed at by the orbs of an adder." Admirable as are the eyes which we come across in this story, scarcely less admirable are the sights which they see and the light by which they see them. We have "moonbeams shimmering through the lattice-work," and "lights shimmering through the Venetian shutters" outwards, at the same time that there was the moon to shimmer through them inwards. We have "a crepusculous light that, stealing over the valley, empurples the foliage of the pecan-trees," and we have a stream that glides "with the sheen of silver and the sinuosity of a snake." We have moreover "something in the air, a speaking electricity that told him [a faithful negro] the child of God would triumph and he of the Devil be discomfited." The speaking electricity happily told the truth, though the child of God had just had a narrow escape with his life; for, when buried in the ground, "within three feet of his face he saw the white serrature of teeth and red panting tongues." On other occasions, even when there was no speaking electricity about, it was not difficult to read the future. The hero had his mind filled "with a strange foreboding, something like a prescience of evil," at the very time when, some miles away, the heroine was being carried off. The villains also, as well they might, for they were close on the end of the third volume, had in their turn "a prescience of evil." We cannot but wonder that these forebodings and this prescience are so often vouchsafed us, for in all the course of our reading we have never come across any one who paid the least attention to them. Wonderful as are the sights, scarcely less wonderful are the sounds. One of the most wicked of the wicked heroes "roars like an infuriated bear," heaves a sigh that "came from the bottom of his brawn (*sic*) chest, resembling the snort of a bear," is heard "growling like a grizzly bear," and, stranger than all, "gives utterance to an exclamation resembling the bellow of a bull, only more blasphemous." No wonder that, when he and the honest backwoodsman meet in an awful fight, there is heard "their hoarse stertorous soughing." After the blasphemous bellow of a bull, it is hardly worth noticing that on two occasions the birds are "stridulent," and that the thrush is "the grand polyglot of the feathered community." Captain Mayne Reid clearly delights in a word of classical origin, though sometimes he is not very fortunate in the use he makes of it when he has managed to secure one. A troop of horsemen sounds somewhat common no doubt. Nevertheless we can hardly approve of his so often calling it a cohort. He would have been nearly as accurate and more pleasing by his well varied phrases if he had now and then called it a Roman Legion or a Macedonian Phalanx.

It is a pity that Captain Mayne Reid has been so thoroughly successful in spoiling his style. Improbable as his incidents always are, and monstrous as they often are, he nevertheless knows how to work up what is called an exciting situation. It is a pity that the reader, while hurrying on in breathless interest to see how hero and heroine are to be saved, has so often to stop to laugh at the absurdity of the language. There is nothing, we dare say, very new in the various incidents of the story; but so long as it is a tale of the wild life of some scarcely explored country, the ordinary English reader will find pleasure in it, even if he knows that it is more than twice told. *Robinson Crusoe* gives us all in our childhood a craving for more stories of savage life, which scarcely gets satisfied even by the time we are men. The *Last of the Mohicans* and *Masterman Ready* are of such a nature that appetite grows by what it feeds on, and from them the reader would likely enough pass unsatiated to Captain Mayne Reid. We hope that he will, before it is too late, try to write one story free from speaking electricity, blasphemous bellowing, shimmering, and cohorts. If he will only give us good English, we will welcome all his old incidents as heartily as if they occurred in the story of the old grouse in the gun-room. The heroine shall again tumble at night off a steamer into a river full of alligators, and shall again be saved by her sister's lover, should the hero, as in the present story, be lying in a swamp with a bullet among his ribs. The hero shall again rescue the heroine from a troop (not a cohort) of mounted brigands, and shall in his turn be rescued by a faithful negro and an Herculean backwoodsman. The aged father shall again give them his blessing as they stand before the altar of a chapel, but not this time a *capilla*. We shall read it with delight to the end, and when we have come to the last page, shall be quite ready for another "Romance of Forest and Prairie."

FRENCH LITERATURE.

M. JULES LOISELEUR* is fond of solving difficult historical problems. He has compared himself to a magistrate who, with a puzzling case before him, proceeds cautiously step by step, avoiding everything which might savour of a preconceived opinion, and carefully sifting the minutest scrap of evidence available. He seeks also to go beyond the examination and discussion of facts; he studies the motives under the influence of which men have acted, and adds to the analysis of documents that of the human heart. This method of dealing with history, already carried out by him in a volume entitled *Problèmes historiques* which we noticed several years ago, is now applied to four episodes belonging to the early part of the seventeenth century. The first is the murder of Henry IV. by Ravaillac, a crime ascribed by some historians to the mere spontaneous fanaticism of the assassin, whilst others consider it to have been part of a vast and well-conceived plot, at the head of which was, of course, the King of Spain. M. Loiseleur believes that both views of the matter are correct. Ravaillac, no doubt, acted under the impulse of fanatical opinions; but at the same time his private feelings were worked upon by the Duke d'Épernon and the Marchioness de Verneuil, who on this side of the Pyrenees furthered the designs of Spain. If, on the 14th of May, Ravaillac had not struck the blow, others were quite ready to take his place; and everything was so well prearranged that, three days after the catastrophe, an engraved portrait of the new King of France was already hawked about the streets. The second essay contained in the volume before us treats of the revolution of April 24, 1617, which brought about the exile of Marie de' Medici and the short tenure of power enjoyed by Albert de Luynes, whose policy our author condemns, agreeing in this respect with M. Michelet and M. Bazin, whilst he totally dissents from M. Cousin, whom he accuses of having systematically endeavoured to rehabilitate heroes and heroines of doubtful character. The death of Gabrielle d'Estrees, already examined in the *Problèmes historiques*, is once more described here, in connexion with a new and important document recently brought to light and forwarded to M. Loiseleur. Finally, the share taken by Mazarin in the Neapolitan revolution of 1647 is examined with the aid of historical documents hitherto unpublished. The Cardinal Minister is blamed severely for not having effectually helped the movement at a time when the Duke de Guise, whilst endeavouring to revive the pretended claims of his family to the crown of Naples, was really working in the interest of France.

The *Recherches* which M. Canel has published* are only a compilation, as he acknowledges; but they contain numerous interesting facts about Court fools and other eccentric characters who either officially or otherwise have amused the public in France by their witticisms. M. Victor Hugo's *Marion Delorme* and *Le roi s'amuse* have familiarized us with the names of L'Angely, Court jester to Louis XIII., and Triboulet, who held the same office during the reign of Francis I.; but the list of these worthies is a long one, and it deserved to be commented on by a trustworthy historian. Let us add that M. Canel has satisfactorily performed his task.

Everything connected with Sainte-Beuve is sure to attract notice, and we have no doubt that, if his entire correspondence appears in print, it will be eagerly perused, especially by the lovers of scandal.† It is well known that the *causeur du Lundi* loved dearly to abuse in private writers and other public characters whom he praised in his articles. A brother critic has aptly described him as a cat who was always delighted to make even his best friends feel that under his velvet paws there was an offensive weapon admirably qualified to wound the unwary. He quarrelled with the Princess Mathilde, as he had quarrelled with all his friends; the letters she had written to him were returned, and those which he had addressed to her are now published. So far as the author's reputation is concerned, it would have been far wiser to destroy them; for if they are interesting on account of the details they give us about certain persons of the Imperial *entourage*, they will certainly not raise our estimation of the moral character of M. Sainte-Beuve. It is amusing to see a man apparently so proud and independent as the historian of Port Royal, doing all he can to be made a Senator, and pouting like a sulky child when he fancies that his claims have been overlooked.

For further particulars respecting this remarkable man we may recommend, as an excellent source of information, M. Paul Foucher's amusing little volume, *Les coulisses du passé*.‡ It is a series of *feuilletons* contributed to the *Indépendance Belge*, and is full of valuable criticism. M. Foucher is both original and interesting when speaking of the masterpieces of dramatic literature; and when he comes to our own times and tells us what he knows of his contemporaries, he gives us details which will be extremely useful to future historians of French literature. He is the brother-in-law of M. Victor Hugo, and has therefore enjoyed advantages of which few similar writers can boast. Accordingly the whole band of the *école romantique* appears in his pages, and we can watch the development of the crusade directed by the poets of 1829-40 against the traditions of their classical rivals. Anecdotes, letters, and *bons-mots* abound, and all the *habitués* of the rue Notre-Dame des Champs sit for their portraits. In the particular case of Sainte-Beuve we think that M. Foucher had been extremely indulgent, and there are certain circumstances in the critic's life which the least prudish censor cannot gloss over or extenuate.

* *Recherches historiques sur les fous des rois de France.* Par A. Canel. Paris: Lemerre.

† *Lettres à la princesse.* Par C. A. Sainte-Beuve. Paris: Lévy.

‡ *Les coulisses du passé.* Par Paul Foucher. Paris: Dentu.

M. Compayré's essay on the philosophical system of David Hume is a very well written work*, showing a thorough knowledge of the theories which he analyses, and of English metaphysics in general. He does not attempt to give a complete biography of Hume; but, after relating those incidents in his life which have any reference to the development of his views, he discusses the merits of those views, examining successively the doctrines of the philosopher on the origin of our ideas, on truth, the existence of God, the passions, freedom, and morality. M. Compayré devotes a long chapter to Hume's scepticism, which he regards as thoroughly honest, however dangerous it may be and really is. The philosopher seems to have been fully aware of the consequences to which his theories might lead, for they filled him with sadness, and it was this perhaps that induced him to abandon metaphysical investigation for history. Whatever opinion we may form of Hume's philosophy, it is impossible to deny that it powerfully influenced the thinkers of England, Germany, and France; Reid, Kant, and Comte can only be thoroughly known and appreciated if we study their writings with constant reference to the doctrines of the eminent man whose merits as a philosopher have been so ably and, on the whole, so fairly stated by M. Compayré.

The two volumes published by M. Perrens†, and to which the Académie des Sciences morales et politiques has awarded one of its annual prizes, furnish another instance both of the remarkable impulse lately given to historical studies on the other side of the Channel, and of the perseverance with which recent historians endeavour to account for the present state of France by an investigation into the past. M. Picot's *Histoire des états généraux*, and Viscount de Luçay's *Assemblées provinciales sous Louis XVI.* derive, as we said some time ago, much of their interest from the fact that they are really *ouvrages de circonstance*. The same may be said of the new work of M. Perrens, who tells us in his introduction what are, from his point of view, the true conditions of a democratic society. It is an error to suppose that the ambition of a few obscure demagogues, encouraged by the sad state of France during the fourteenth century, was the only cause of the revolution attempted by Étienne Marcel and Robert Le Coq. Long before that time the French *bourgeoisie* had made repeated efforts to obtain a share in the administration of the country, and although the destruction of the communes had strengthened the royal authority and made representative government impossible for a time, yet the right of voting subsidies had been secured, and the extravagance of the Court multiplied opportunities for the citizens to control the assessment and expenditure of the taxes. M. Perrens discusses very ably the origin of democratic ideas, and thus enables us to appreciate the real character of the movement at the head of which the *prévôt des marchands* and the Bishop of Laon placed themselves in 1351. It has been lately the fashion to draw a parallel between the States-General then assembled and the revolution attempted by the Paris Commune in 1871. M. Perrens shows that the only similarity is to be found in the general condition of France at both epochs. Sedan and Poictiers equally recall to our minds the humiliating defeat of French armies, the sovereign made a prisoner, incapable generals, a thoroughly inefficient organization, and scandalous abuses which rendered defeat inevitable by misleading public opinion as to the real number of available troops. But whilst, in the days of Étienne Marcel, Paris placed itself at the head of the kingdom for the purpose of defending it the more effectually, and of making up for the loss of the monarch and the dispersion of the nobility, the Paris of 1871, or rather the cosmopolitan rabble which triumphed there for a short period, endeavoured to substitute itself for France at the very time when France itself was in arms and struggling to recover from the terrible blow the Prussians had inflicted upon it. After describing in detail the revolution of 1355, M. Perrens devotes a separate book to the consideration of democratic tendencies under the reign of Charles V.; book the third contains an account of the popular movements which marked the unhappy rule of Charles VI.; and finally we have a survey of the part performed by the Parisian demagogues at the instigation and for the benefit of the two rival factions of the Bourguignons and the Armagnacs. A supplementary chapter sketches the progress of democratic tendencies from the reign of Charles VII. to the Revolution of 1789.

Messrs. Hachette have begun the publication of a new Dictionary‡ which bids fair to deserve and obtain a large success. Up to the present time our French neighbours could boast of no work equal to Dr. William Smith's *Dictionary of Antiquities*: but if we may judge from the first *livraison* now before us, the lexicon jointly edited by Dr. Daremberg and M. Saglio will be quite worthy of a place beside the English one. The publishers have done well in selecting the royal quarto as the shape of the new Dictionary; each page is thus more full of matter, whilst the type is clearer, and a larger space has been allowed for pictorial illustrations. Every article is signed by its author; and the footnotes supply all the references which the student may require. Amongst the most important articles contained in this fasciculus we may notice the two entitled respectively *acta* and *actio*, which give ample details on interesting points of Roman law. We regret to say that Dr. Daremberg has not been spared to see the issue even of the first instalment of the work. M. Saglio is now solely responsible for it.

The second instalment of the new edition of Saint-Simon's Memoirs is just out*; it suggests no remark of any consequence; and the few notes added by the editor, M. Chérue, merely bear upon some grammatical inaccuracies of the writer. The prosecution which the Court of Rome directed against Fénelon's *Maximes des Saints*, and the beginning of the intrigues connected with the Spanish Succession, are the chief topics discussed in this volume.

We ought to have noticed M. Hartsen's substantial little volume† long ago; but it requires careful reading. The author begins with a protest against the distinction which some persons maintain, resting upon the supposed classification of philosophers into empiricists and rationalists, according as they observe facts or merely theorize. It is surely not difficult to show that such a distinction is fallacious; the strongest empiricist must deduce some kind of theory from the data with which experience supplies him; and, on the other hand, it is impossible to reason without assuming as a starting point some observation either true or false. Hence it is idle to argue that psychology should be treated according to the method employed by naturalists. In every branch of science there is only one good method, and naturalists must submit to it as well as psychologists. After having shown how a true system of psychology should be constructed, M. Hartsen goes on to treat his subject in detail. His remarks on desire, memory, gratitude, &c. are extremely curious, and show acute observation and careful study. The volume concludes with an appendix intended to refute the fashionable materialist arguments of the present day, and with a series of explanatory notes.

M. Francisque Bouillier has published a second edition of a work‡ which obtained much success at the time when it first appeared, and which is certainly a remarkable contribution to metaphysical literature. His theory is that generally known under the name of "animism," which looks upon the soul as the seat not only of thought and intellectual life, but of the activity which influences all our organs. Objections have been raised against this theory from several points of view. Animism, say some, leads to materialism, because it is difficult to represent the soul as the cause of material effects without assigning to it attributes and a nature analogous to these effects. M. Bouillier endeavours to show, on the contrary, that animism is the only theory by the help of which the materialistic school can be successfully refuted. The accusation of pantheism has also been directed against the animists, but, we think, with very little reason; for, whatever views we may entertain about the unity of the living principle in man, it is clear that the individual soul, such as M. Bouillier represents it, is totally different from the soul as the Stoics and the philosophers of the Alexandrine school understood it, which was merely a part of the universal principle animating the universe.

M. Alfred Rambaud has taken as the subject of his lectures at the Caen Faculté des Lettres the relations between Germany and France from 1792 to 1804.§ He writes to refute the opinions of modern German historians with respect to the evils which they assert that their country has had to endure from *la grande nation*. In the first place, he says, it would be unjust to accuse the French Republic of any intention of domineering on the right bank of the Rhine; the only aim of the revolutionary Government was to secure for France what he calls its natural limits, and also to carry out that kind of philosophical propagandism which Robespierre, Danton, and others looked upon as necessary for the welfare of humanity. The war of aggression arose from the murder of the plenipotentiaries at Rastadt, and thus, according to our author, Germany brought down upon herself the treatment she had to suffer at the hands of France. But, M. Rambaud remarks, the good results produced by the administration of Bonaparte more than compensated for the severities consequent upon military occupation, and the condition of the Germans during the Empire was really better than that of the French. M. Rambaud's views do not require much criticism; but it may be admitted that they are ingeniously put, and his little volume has the merit of being readable.

Amongst the reprints of well-known books which the Paris press has recently issued, we may notice the *Lettres portugaises* and the *Lettres de Mademoiselle Aïssé*, placed together, as well they might be, in the same duodecimo.‖ The former of these productions originated in a real love intrigue, carried on in 1665, during the occupation of the city of Beja by the French troops, by a young officer of the name of Bouton de Chamilly and a Portuguese nun, Dona Marianna Alcofavado. The *Lettres portugaises* published in the first instance were only five in number, but the success they obtained was so great that imitations came out on all sides, and the *religieuse portugaise* became unconsciously responsible for a number of letters with which she had nothing whatever to do. M. Sainte-Beuve's sketch of Madlle. Aïssé has

given every possible detail respecting this remarkable woman and her lover the Chevalier d'Aydie. Her essentially unartificial character, her generous disposition, and her spirit of self-sacrifice form a very pleasant contrast with the tone of the society in which she lived; but they are not more striking than the unaffected beauty of her style. Her letters had been already several times published, and the present annotator, whilst taking as his guide the edition printed by M. Ravenel some thirty years ago, has found occasion to emendate here and there, and especially to add a great deal in the shape of illustrative notes. An excellent index completes the volume.

M. Paul de Musset's *Lauzun** is another reprint about which we may say a word. It is a kind of historical novel founded on the life of one whose entire career savoured more of romance than of reality. M. Paul de Musset's style, with its simplicity, its terseness, and its elegance, always appears to most advantage in those slight sketches which he is so fond of devoting to the heroes and heroines of the seventeenth century. Considered from this point of view, *Lauzun* is certainly one of his best works, and it stands in strong contrast with M. Janin's pretentious though brilliant volume, *La fin du monde et du neveu de Rameau*.† Nothing can be imagined more wearisome than this writer's mannerism when he ventures beyond the proportions of a newspaper article. His *feuilletons* are excellent, his novels intolerable. It is something, however, to be able to say that both M. Paul de Musset and M. Jules Janin, in the two works before us, commit no offence against morality, and present us with nothing really objectionable. The same remark may be made respecting the Greek tale of M. Rangabé. The *prince de Morée* ‡ professes also to be founded upon fact; it takes us back to the middle ages, and introduces us to the Crusaders who, after starting from the West in the year 1198 for the purpose of conquering the Holy Land from the infidels, stopped at Constantinople, and there founded an ephemeral French Empire. Geoffroy de Villehardouin, the celebrated chronicler, occupies a prominent part in this novelette, which seems faithfully translated from the modern Greek.

We do not know what to think of the extraordinary volume purporting to be the production of Madame de Saman.§ Is it a *bonâ fide* autobiography, or are the names of Chateaubriand, Sainte-Beuve, and Thiers, which are so frequently to be found in its pages, merely designed to give an air of reality to the narrative? George Sand's preface is very eulogistic; but then we must remember that Madame de Saman's notions of marriage and love are exactly those which are upheld in *Jacques*, *Lélia*, and *Valentine*; she "follows her heart in all freedom"—that is to say, she gives full swing to her passions, and glosses over the most irregular kind of life by long tirades on philosophy, the infinite, &c., &c.

M. Louis Blanc's *Questions d'aujourd'hui et de demain*‖ are a series of essays published at various times, in which the principles of Republican government are stated and maintained. The relations between the commune and the State, universal suffrage, the nature and essence of power—such are the chief topics discussed in this volume.

The *Class-book of Comparative Idioms* recently issued by Messrs. Hachette¶ is intended to supersede the ordinary dialogues which are so extensively used in schools at the present day. The French phrases and their English equivalents being printed in separate volumes, the reader will be able to employ with great advantage the materials thus placed within his reach, either for *viva voce* instruction or as subjects for written translations; and particular care has been taken to exclude obsolete, unusual, or slang expressions.

JOHN STUART MILL.—A COMMITTEE has been formed to consider the most fitting mode of expressing the NATIONAL RESPECT for the MEMORY of the late Mr. J. S. MILL. The Committee consists of:

The Duke of Argyll, K.T.
The Duke of Devonshire, K.G.
The Marquis of Salisbury.
The Earl of Derby.
The Earl Russell, K.G.
Viscount Amberley.
Viscountess Amberley.
Lord Belper.
Right Hon. W. E. Forster, M.P.
Right Hon. G. J. Goschen, M.P.
Right Hon. James Stansfeld, M.P.
Right Hon. C. P. Villiers, M.P.
Sir John Lubbock, Bart., M.P. (Hon. Treasurer).
Sir James Hannen.
Sir H. S. Maine.
Mr. Arthur Arnold (Hon. Secretary).
Mrs. Garrett Anderson.
Professor Bain.
Professor Cairnes.
Dr. W. B. Carpenter, F.R.S.
Miss Cobbe.
Professor Fawcett, M.P.
Mr. E. A. Freeman.
Mr. G. J. Graham.
Mrs. William Grey.
Mr. Thomas Hare.
Professor Huxley, F.R.S.
The Rev. Professor Jowett.
Mr. W. E. H. Lecky.
Mr. T. E. Cliffe Leslie.
Mr. J. A. Roebuck, Q.C.
Miss Emily Shirreff.
Mr. Herbert Spencer.
Mrs. P. A. Taylor.
Mr. Alfred Tennyson.
Mr. W. T. Thornton, C.B. (Hon. Secretary).
Professor Tyndall, F.R.S.

Contributions, of any amount, which will be acknowledged in future advertisements, will be received by Sir JOHN LUBBOCK, Bart., M.P., Hon. Treasurer, 15 Lombard Street, E.C.

CLIFTON COLLEGE.—SCHOLARSHIPS.—The following will be open to Competition at Midsummer:

1. One or more of the value of £80 a year (equivalent to both Board and Tuition free), tenable during the holder's stay at the College.
2. One of £70 a year, open to Boys under Seventeen.
3. One or more of £60 a year, open to Boys under Sixteen.
4. One or more of £25 a year, open to Boys under Fifteen.

For Numbers 1 and 4 an allowance for age is made in favour of young Boys.
The Examination will commence on Wednesday, June 18, at 9 A.M.
Further information can be obtained of the HEAD-MASTER, The College, Clifton, Bristol.

MARLBOROUGH COLLEGE, June 1873.—ELEVEN SCHOLARSHIPS, varying in value from £30 to £15 a year, besides a certain number of Free Admissions, will be competed for on 18th and 19th June instant. These Scholarships are open to members of the School and others without distinction; two will be offered for proficiency in Mathematics. Age of Candidates from 12 to 16.—Full particulars may be obtained on application to Mr. SELLICK, The College, Marlborough.

FETTES COLLEGE, COMELY BANK, EDINBURGH.
Head-Master.
ALEXANDER W. POTTS, M.A., late Fellow of St. John's College, Cambridge, and some time one of the Assistant Masters of Rugby School.

SCHOLARSHIPS.

Two Scholarships, each of the annual value of £40, and tenable during residence at the College, will be open to Public Competition in July 1875.
The Examination will be open to any Boys (not already on the Foundation), whether Members of the College or not, between Eleven and Fourteen years of age. Allowance will be made for age, and sound elementary training will be considered very important.
The Candidates will be examined in English Grammar and Composition, Arithmetic, Latin Grammar and Construction, and Prose Composition. Boys over Thirteen years of age will also be examined in Greek, French, and Geometry.
The successful Candidates will be required to reside in the College, and will be admitted in the month of September following their election.
The ordinary charges for each Boy are as follows:

Entrance Fee ..... 10 Guineas.

ANNUAL CHARGE.

Board ..... £60 per Annum.
Tuition ..... £7 "

But in the case of Scholars the Entrance Fee will not be exacted; so that the actual annual cost for each Scholar, giving credit for the amount of the Scholarship will be £45.
The names of intending Competitors for the Scholarships must be lodged with Mr. FREDERICK PITMAN, W.S., 48 Castle Street, Edinburgh, Clerk to the Trustees, not later than July 1, 1873.

HIGHFIELD SCHOOL, Weston-super-Mare.—Conducted by a Wrangler, assisted by a Graduate in Classical Honours. Terms, £81. Specially adapted for delicate Boys.—Address, GEORGE HEPPEL, M.A.

INDIA CIVIL SERVICE.—The following are the SUCCESSFUL CANDIDATES at the recent Open Competition for the Civil Service of India:—

In order of Merit.	NAME.	Total No of Marks.
*1.	Wilson, J.	1,790
*2.	Maclean, W. A.	1,787
*3.	Mark, W. H. H.	1,723
*4.	Finlay, J. F.	1,716
*5.	Thayre, R.	1,647
*6.	Staley, A. E.	1,525
*7.	Russell, W.	1,411
*8.	Mackay, D. L. M.	1,398
9.	Hughes, G.	1,398
10.	Pearse, F. T.	1,398
11.	Fuller, J. R.	1,288
*12.	Symes, E. S.	1,310
*13.	McLean, J. J.	1,307
	Taylor, L.	1,307
15.	Wells, W. F. W.	1,300
16.	Pennington, H. F. D.	1,293
17.	De, H.	1,291
18.	Pargiter, F. E.	1,276
19.	Plane, G. W.	1,273
20.	Farrer, H.	1,217
21.	Thurburn, W. M.	1,216
*22.	Mitchell, T.	1,212
*23.	Boulger, D. S.	1,208
24.	Martindale, A. H. T.	1,199
25.	Marriott, C. H.	1,187
*26.	Primrose, A. J.	1,169
*27.	Anderson, J. D.	1,168
28.	O'Farrell, H. H.	1,117
*29.	Riddle, J. H.	1,121
30.	Peterson, H. R.	1,118
*31.	Hebbert, F. H.	1,117
32.	Rees, J. D.	1,115
33.	Fiddian, J. P.	1,102
34.	Tremenheere, J. H. A.	1,096
35.	Power, G. F. T.	1,055

9 Pupils of Mr. WREN, 3 Powis Square, W., who prepares RESIDENT and NON-RESIDENT PUPILS for I.C.S.—Address, till June 5, Grazeley Court, Reading.

INDIAN CIVIL SERVICE.—A SELECTED CANDIDATE wishes to read with a few PUPILS in Botany.—Address, D., 8 Westbury Road, Harrow Road, N.W.

MILITARY APPOINTMENTS and CIVIL ENGINEERING.—The Rev. W. H. JOHNSTONE, M.A., formerly Professor, Examiner, and Chaplain in the Military Engineer College, Addiscombe; and Assistant-Examiner for the Indian Civil Engineer Service; continues to prepare CANDIDATES for Woolwich, Cooper's Hill, Direct Commission, &c.—Address, Bromsgrove House, Croydon.

THE LONDON CIVIL SERVICE and MILITARY COLLEGE, 21 York Place, Portman Square, W.—*Principal*, Dr. HEINEMANN, F.R.G.S. Special PREPARATION for Cooper's Hill, the Line, Woolwich, the Civil Service, &c.

PRELIMINARY EXAMINATIONS for LAW, MEDICINE, and CIVIL SERVICE, can be passed expeditiously and creditably by studying under Mr. HOWSE, 3 Staples Inn, Holborn.

DIRECT COMMISSIONS.—Mr. ASHTON prepares CANDIDATES (Resident or non-Resident), for the above and other Examinations. At the recent Examination, Five of Mr. ASHTON'S Pupils were successful.—84 King Henry's Road, S. Hampstead.

PARIS LETTER.—An ENGLISH GENTLEMAN of Literary experience wishes to CONTRIBUTE to a London or Provincial Paper a WEEKLY LETTER from France. He is intimately acquainted with Parisian Social and Political life, including Art, the Drama, Literature, &c. Proofs of former contributions on application, or a personal interview arranged at the Athenæum Club, London.—Address, E. E. T. E., Esq., 31 Brook Street, Grosvenor Square, London, W.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. Turkish Baths. Consultations daily (Saturday excepted) at 7 Princes Street, Hanover Square, from Ten till Twelve.

INDIAN PARCEL POST.
Under Authority from the POSTMASTER-GENERAL of INDIA.
Parcels not exceeding fifty pounds in weight and 6 ft. × 1 ft. × 1 ft. in size, and £50 in value, are conveyed by the PENINSULAR AND ORIENTAL COMPANY from London to any Post Town in India at a uniform charge of 1s. 6d. per lb. Full Particulars on application at
122 LEADENHALL STREET, E.C.

BRIGHTON.—BEDFORD HOTEL.—Every endeavour is made to render this Hotel equal to its long-existing repute. Spacious Coffee Room for Ladies and Gentlemen. Sea-Water Service in the Hotel.—Communications to The MANAGER, Bedford Hotel Company, Limited.

No. 920, Vol. 35. June 14, 1873. [Registered for Transmission abroad.] Price 6*d*.

THE SPANISH ANARCHY.

THE progress of disorder in Spain corresponds with painful fidelity to the anticipations of prudent politicians. The first day of the Republic was the least gloomy; and the gathering of clouds has since been uninterrupted. The shadow of legal right which was preserved for a time disappeared when the Ministers, at the dictation of the mob which had previously remodelled the Cabinet, dissolved the Permanent Committee of the Cortes. Even the eloquent assurances of CASTELAR became fainter and fainter with the dissolution of military discipline and of civil obedience. In defiance of probability and experience the Ministers affected to hope that a Constituent Cortes would confer solidity and permanence on the new institutions. The more rational leaders probably saw with alarm the election of an exclusively Republican Assembly representing only the least enlightened and most violent section of the community. On the eve of the meeting of the Cortes, the Government, without a pretence of right, endeavoured to earn a cheap popularity by abolishing all ranks of nobility and titles of honour; but the original promoters of the revolution were already convinced that it had passed beyond their control. At their first sitting the Cortes decreed with ridiculous unanimity the establishment of that Federal Republic which is nevertheless as yet only a name. From that moment the supposed representatives of the people indicated the estimate of their own mission by an incessant exhibition of utter incapacity and shameless disorder. That the Ministers should resign their offices to the new Assembly might be regarded as a decent form; but in a country which retained any instinct of practical Government, they ought to have been immediately reinstated in their places. A knot of politicians which had taken upon itself to overthrow the Constitution, and which had exercised unquestioned power for several months, was morally bound to continue its services as long as the country required its aid. It had already been rumoured that CASTELAR was weary of his irksome task; and, to the general surprise, FIGUERAS also refused to return to office. Having turned the head of the ship to the breakers, and set all sail, the crew took to the boats; and probably their desertion accounts in some degree for the intemperate violence of the subsequent proceedings. The first quarrel arose on the question whether the new Ministers should be appointed singly or by a list; and then the Cortes fiercely contested the mode of election by open voting or by ballot. The first chief of the Cabinet was Señor PI Y MARGALL, one of the few respectable leaders of the Republican party; but in twenty-four hours he found it necessary to resign, and FIGUERAS once more attempted to form a Government. The first Cabinet appointed by the Cortes lasted long enough to produce a Budget, which consisted chiefly in a proposal to issue 20,000,000*l*. of an irredeemable paper currency with forced circulation. Revolution, like a watch running down, accomplishes its circles faster and faster, and modern imitations revolve in the familiar groove. The three months' old Republic in Spain is already reduced to dependence on *assignats*, except indeed that Spanish banknotes have not even, like the currency of the first French Revolution, a mass of national property behind them. The opponents of the scheme could only suggest the alternative of a forced loan; and, according to a scarcely intelligible statement, the Ministers themselves condemned the project of their colleague. Señor ORENSE tendered his resignation of the Presidency over an uncontrollable Assembly; and by the latest account PI Y MARGALL was once more chief Minister, while FIGUERAS had followed SAGASTA, ZORRILLA, and SERRANO into exile. The demagogues of the streets are already exhorting the sovereign people to supersede the authority of the Cortes, and it is not improbable that within a week the faction which corresponds to the Paris Commune may have succeeded to office. It is in Spain apparently that the democratic Helot will furnish the most graphic illustration of the blessings of universal suffrage.

As might be expected, the Carlists profit by the prevailing anarchy in the prosecution of their petty warfare. General NOUVILAS, commanding the Republican army in the North, has been unable to redeem his hasty pledge of overwhelming the insurgents by the beginning of June. In most of the reported skirmishes the Carlists seem to have obtained the advantage; but their victories display even more conspicuously than their defeats the insignificance of their resources. Notwithstanding the helplessness of their enemies, the Royalists have occupied no considerable town, and they are evidently unable to place a regular army in the field. Their hopes of the adhesion of disaffected officers have hitherto been disappointed, and there seems reason to believe that the Government troops incline, as far as they have any political leaning, to the cause of Don ALFONSO, son of Queen ISABELLA. An obscure mutiny at Grenada is supposed to have been promoted by Alfonsists; but it is for the present difficult to ascertain the objects of the different civil and military factions. In some places disturbances have arisen from causes unconnected with political objects. A body of Republican volunteers at Aranjuez was assaulted, in consequence of an insult offered to a woman, by the inhabitants armed with sticks; and one of their number was killed on the spot. The troops in the garrison of Madrid are guilty of frequent acts of insubordination; and their mutinous disposition is of course ascribed to the machinations of Carlist agents. The most serious case of mutiny which has yet occurred is the revolt of a portion of the troops stationed in Catalonia against General VELARDE. The pretext of the outbreak was the appointment of an unpopular captain who was rejected by his battalion with shouts of devotion to the Federal Republic. General VELARDE was forced to save himself by flight, though it is asserted that a portion of his force has remained faithful to its colours. The local government of Barcelona, which has on more than one occasion favoured military insubordination, appears in the present instance to side with the General against the mutineers. It seems that a deputation with reinforcements has left Barcelona to join VELARDE, and possibly the revolted troops may for the present be recalled to a sense of duty. Their clamorous attachment to the Federal Republic is founded on an interpretation of the phrase which probably accounts for any popularity which the new institutions may enjoy. To its partisans in the army, as in the country and the Cortes, the Federal Republic represents neither a combination of States nor a harmonious organization of local and central government, but unbounded license to every man to do what he likes. General VELARDE violated the principles of Federal Republicanism by appointing an unpopular captain of a company, and consequently the Federal Republicans under his command summarily dismissed their General. It would be interesting to ascertain whether CASTELAR still believes in the fine phrases which he learned from MAZZINI, or which he adorned for himself with the local colouring of Spanish Federalism. The whole organization of society appears to be crumbling to ruin since the doctrine of disobedience has been acknowledged as the rule of political practice. It was the pride of the Republican minority to render no voluntary submission to established authorities; and now the uncompromising faction refuses, with better reason, to acknowledge the control of rulers who are themselves revolutionary upstarts. There are without doubt patriots in Spain, including perhaps in their numbers some of the late Ministers, who must witness with pain and indignation the collapse of society, but, while

authority has been fatally weakened, and while loyalty has for the time disappeared, the ultimate resort of material force is at present unavailable. In all probability Spain will fall from bad to worse, until a disciplined force under a capable leader has emerged from the chaos of civil conflicts. A military despotism may restore order for a time; but the whole process of political improvement will have once more to begin from the beginning. No political party in Spain is exempt from the guilt of having deliberately or unconsciously contributed to the overthrow of liberty and order. SERRANO and PRIM committed a pardonable error in dethroning a Queen whose political and personal conduct was scandalously discreditable. The assassin who murdered PRIM inflicted the next blow on the prosperity of Spain; and the ungenerous and foolish opposition of SERRANO and the Moderate party to King AMADEO prepared the way for the miserable Republic which calls itself Federal.

The extreme faction of Madrid is demanding through its newspapers another armed revolution. It might have been thought that the passion for anarchy had satiated itself, but perhaps those who love rebellion on its own account may fear that, if the present opportunity is lost, there will no longer be a Government to overthrow. According to some reports the obscure persons who have within the last week succeeded one another in office have thought of the ingenious plan of distributing among the peasantry the estates of great proprietors. In this way it is supposed that a force might be created which would be able and willing to resist the Carlist incursions. The imbecile wickedness of the dominant faction exceeds all the hopes or fears of its enemies. Before the present cycle of revolution began, Spain, notwithstanding the defects of the Government, was rapidly advancing in material prosperity, and the discontent which existed was mainly confined to the army, the Court, and a small number of professional politicians. The Republicans, first by their opposition to more orderly Governments, and chiefly during their own administration of public affairs, have succeeded in impairing all securities for life and property, so that a large part of the more respectable population has taken refuge in foreign countries. For the evils which folly and ambition have inflicted on the country there is absolutely no compensation. The Government at Madrid, if indeed there is a Government, has neither popularity nor power; and when it is overthrown by some ignoble street riot, its unknown members will be supplanted by representatives of a still lower social stratum. The most conclusive condemnation of the Federal Republic is that, in the opinion of some political observers, the Carlists have for the first time since the disturbance of the old law of succession a possible chance of triumph. Although their efforts in the field are petty and desultory, an absolute monarch would be preferred to the odious and degrading tyranny of the mob of Madrid and Barcelona. A movement in favour of the rival branch of the BOURBONS would probably be more acceptable to the better classes; but in the present circumstances only a military leader could even attempt the re-establishment of order; and SERRANO, who is perhaps the least unpopular of Spanish generals, is an exile from his country. There is some consolation in the knowledge that the three months' reign of philanthropy and rhetoric is at an end. Political conflict in Spain has reduced itself to the elementary form of a mere comparison of material forces. The mob has beaten the orators; but it will be crushed in its turn as soon as it encounters a disciplined force.

MR. FORSTER AND THE EDUCATION ACT.

THE Elementary Education Act Amendment Bill, as described by Mr. FORSTER, is exactly what it professes to be. It amends, but it does not extend. The arrangements for the compulsory provision of schools remain as before; the arrangements for sending children to school remain as before. School Boards are not to be set up everywhere; attendance is not to be enforced everywhere. As regards the first of these points, taken by itself, the omission is consistent with the spirit of the original Act and with the repeated declarations of the VICE-PRESIDENT of the COUNCIL. The question whether School Boards ought to be made universal may be differently decided according as it is looked at on its own merits or in reference to compulsory attendance. The Education League wish to see School Boards established in every school district on both these grounds. They wish, that is to say, that School Board schools should be provided, not merely, as they are under the Act, in places where voluntary effort has not provided any efficient school, but in places where voluntary effort has provided efficient schools. School Board schools on this theory are to be the rivals, and not merely the supplements, of voluntary schools. It is evident that to have made School Boards universal for this purpose would have been to introduce a radical alteration into the Education Act. The leading principle of that Act was to arrive at a really national system of education by making full use of the partial systems already in being. Wherever voluntary effort had provided sufficient schools, or could be induced to provide them within a reasonable time, it was allowed to hold its ground. To set up a School Board school side by side with voluntary schools created in answer to the invitation of the Government, within three years from that invitation having been issued, and to do this with the avowed purpose of killing off the voluntary schools by means of the close neighbourhood of the School Board schools, would have gone very near to breaking faith with the persons who, accepting the Government assurance that rates might be made unnecessary by adequate subscriptions, had provided sufficient schools out of their own pockets. Parliament, we know, can make no binding contracts, and if a Bill making this change had been introduced and passed this Session, the managers of voluntary schools would have had no strict right to complain. But Ministers can make contracts binding at all events upon themselves, and the managers of voluntary schools would have had good right to complain if such a Bill had been passed at the instance of the present Government.

No breach of faith, however, would have been involved in the universal establishment of School Boards for the purpose of enforcing attendance at school, supposing that it could have been shown that no other machinery would effect this object equally well. In the omission from the Bill of all reference to this aspect of the question, as well as in the highly significant reference to it in Mr. FORSTER'S speech, the influence of the events of the spring may be clearly traced. "As regards compulsory attendance," said Mr. FORSTER, "I "have personally the same opinion as that which I expressed "in debate last year. I have not concealed from my col- "leagues my conviction that direct compulsion might be safely "made the general law for England and Wales." Mr. FORSTER did not go on to say, but it is not difficult to supply the gap, that his colleagues thought that, however safe it would be for England and Wales, it would not be equally safe for the present Cabinet. Whenever compulsory attendance is made universal—and after the precedent of the Scotch Education Bill the change is certain to be introduced some day—it will probably be made so at the cost of some hard fighting in Parliament, and a languid Government with, upon this question, only a divided party to lean on, is not inclined for hard fighting. Perhaps compulsory education might have been as good a question to go to the country upon as any that could easily be found, but to make up its mind to go to the country at all demands more energy than the Government now seems to possess. Certainly, if it prefers to be carried to the country rather than to go to it, it is probably well advised in keeping clear of compulsory education. It is fair, however, to say that there are two considerations which may well have weighed with the Cabinet in determining to leave the question alone. The first is, that whatever be the nature of the machinery by which attendance is to be enforced, the creation of it must throw large additional burdens on the rates, and in the present temper of the House of Commons on this subject it is not difficult to say how it would have received a proposal having this effect. A good number of persons who now talk cheerily enough in favour of compulsory education might have changed their note when the financial part of the question came up for discussion, and it is possible that a motion not to go on with the Bill until after some settlement has been arrived at in the matter of local taxation might have found unexpected favour even on the Liberal benches. The second consideration is that the establishment of direct compulsion as a general law would be very much easier if the religious difficulty were out of the way. As things stand, and are likely to stand for some time to come, the only schools in many districts will be voluntary schools. Compulsory attendance would therefore mean compulsory attendance at Denominational schools under the protection of the conscience clause. With proper safeguards in the way of inspection, we believe that this is a sufficient protection; but the Education League would certainly not accept it as such. It is highly probable that the next election will convince these gentlemen that their

power in the country is very much less than they have till lately supposed it to be, and if their weakness in the House of Commons can be shown to be an accurate measure of their weakness in the constituencies, it will be very much easier to settle the question of compulsory attendance at school.

The positive provisions of the Bill, so far as they were explained on Thursday, are mainly two. DENISON'S Act is to be made compulsory instead of permissive; and the payment of school fees is to be transferred from the School Boards to the Board of Guardians. At present the Guardians may provide for the education of the children of outdoor paupers if they think fit, but they must not make that provision a condition of relief. Mr. FORSTER proposes to repeal DENISON'S Act, and to enact that where outdoor relief is given to children between five and thirteen years of age, or to their parents, it shall be a condition of such relief that elementary education in reading, writing, and arithmetic shall be provided for them, and the Guardians shall give such further relief as may be necessary for that purpose. We do not imagine that this clause will meet with any opposition. It is a matter of the most obvious common sense that in relieving adult paupers care should be taken not to breed up a new generation of paupers to take their place. But to accustom the child of a pauper from babyhood to be maintained out of the rates, while denying him the education which may give him hereafter the wish and the power to maintain himself, is the best way to ensure his becoming a pauper as soon as he is old enough to make a choice for himself. As the law stands, parsimonious Boards of Guardians need not provide for the children of out-door paupers being educated, and even Boards of Guardians, whose wisdom extends beyond pence, are bound to relieve a parent even if he refuses to send his child to school. There are at least, Mr. FORSTER says, 200,000 children of school age whose parents are outdoor paupers, so that the effect of the new provision will be to extend compulsory education to a large proportion of the children who most stand in need of it. The vexed question of the 25th Clause of the Education Act is dealt with, in essentials, in the way which we have all along advocated. Wherever the parent of a child required by the by-laws of a School Board to attend school satisfies the Guardians that he is unable from poverty to pay the school fees, the Guardians are to make him such allowance as will enable him to pay them; but this allowance is not to be granted or refused on condition of the child attending any public elementary school other than such as may be selected by the parent. Mr. FORSTER asked the House to observe that the new clause does not enact that fees are to be paid to school managers out of the rates, but simply that help shall be given out of the rates to parents who without such help would not be able to obey the law. It is to be feared that the Education League will take no account of this distinction, and Mr. DIXON has in fact already sounded the note of fierce hostility to the Ministerial proposal. They will want to trace out the expenditure of the relief given, and will grudge the outlay of the least portion of it in sending children to Denominational schools. Why they are not equally precise about the expenditure of relief given for other purposes—why, for example, they do not make it a grievance that one old pauper buys her tea from a Roman Catholic grocer, while another buys her snuff from a tobacconist in connexion with the Congregational Union, is hard to say. But they are likely, if this analogy is driven home, to arrive at consistency by an absurd extension of their theory, rather than by a rational abandonment of it. It has long been evident that upon this point there is no room for compromise. So long as voluntary schools hold their present place in our educational system, the liberty given to a parent by the 25th Clause to send his child to the school he likes best, whenever there is more than one which gives efficient elementary education, is essential to the successful working of compulsion; and though the Education League may wish to dispense with elementary education altogether rather than have it on these terms, the country is not prepared to go with them. That Mr. FORSTER has maintained the distinction between paupers and parents requiring educational relief is to be regretted. It is an unmeaning distinction at the best, and it may easily become a mischievous one. Some of the worst evils attending it, however, will be removed by the Guardians being made the vehicle through which the relief is administered. It will be their business to determine whether the plea made out for it is genuine, and they will have a large practical experience to guide them in arriving at a conclusion.

FRENCH FINANCE.

THE new Government in France starts with one great and incontestable advantage, for it can at once get credit for wisdom and patriotism by merely avoiding the financial heresies of M. THIERS. Last summer everything was sacrificed to the one great object of floating on satisfactory terms an enormous loan. In order that it might be floated, M. THIERS had to be allowed to govern as he pleased, and to shape the financial policy of the country after his own fashion. He had two special fancies to which he adhered, until, for the sake of political peace, those who most clearly saw the blunders he was making assented to what he proposed. He was bent on freeing France from all Treaties of Commerce whatever, and he was resolved that a large portion of the annual revenue should be derived from taxes on raw materials. There was at no time any point on which he bestowed so much incessant attention, or to carry which he worked so cleverly and manœuvred so adroitly, as that of taxation of raw materials. He assured the Assembly over and over again that these taxes would produce four millions sterling. It was in vain that he was asked to explain how he proposed to get this revenue while existing treaties still permitted the free import of some at least of the raw materials that were to be taxed; and a special Committee in vain reported that, after examining the question to the best of their ability, they had come to the conclusion that the country would scarcely get a farthing of available revenue from the taxes on raw materials. M. THIERS replied that he was M. THIERS, that he knew from the teaching of his inner consciousness that four millions was the sum that would be produced, and that this was the exact sum necessary to balance the Budget. If the country is to be cleared of the foreigner there must be a big loan, he kept on repeating; if there is to be a big loan, the Budget is to be balanced; if the Budget is to be balanced, raw materials must be taxed. The Assembly listened, did not believe a word he said, and voted as he wished. Indirectly this vote produced the effect intended. Lenders did not accept M. THIERS's statements and suppose that the Budget would be balanced by taxes on raw materials, but they saw in the readiness of the Assembly to support the Government of the day on financial questions, even against the opinion of nine-tenths of the voters, an assurance that France would in some way or other see that its Budget was balanced. Now that sufficient time has elapsed to ascertain what has been the practical effect of the scheme of taxation to which M. THIERS clung so fondly, it is found that all his expectations have been deceived. The taxes on raw materials, which were intended to produce four millions, have not produced anything. The whole scheme is a total failure. The expected revenue from other sources has also proved deficient, and the new Government, which finds a natural pleasure in revealing all that its adversaries must have long mourned over in secret, announces that there is a deficit of eight millions sterling. To provide for a deficit of eight millions sterling is generally as melancholy a duty as a Government can be called on to discharge. But in this case there is much to make the operation pleasant. The new Ministry can clearly cast the burden of discredit on the shoulders of their predecessors, and every financial step they take is also a step towards the great result of lowering the reputation of M. THIERS.

The new Government is remarkably strong in financial ability. M. MAGNE was twice Finance Minister under the Empire, and the confidence he won in that position is generally recognized as one of the main causes of the great rise in the price of the public funds during the last fortnight. M. DE LA BOUILLERIE, the Minister of Commerce, was the author of the Financial Report of 1871, and was the Reporter on the Budget of 1872. Both Ministers voted against the taxes on raw materials, and abstained from voting for the Bill to abolish the English Treaty of Commerce. Now, therefore, that they are prepared to reverse the policy of their predecessors, they come forward perfectly unfettered, and command the attention due to men who thoroughly understand the business they are taking in hand. On Saturday a deputy, acting no doubt in concert with the Government, proposed that the taxes on raw materials should not be levied until compensatory duties could be imposed on all foreign goods. This was, in effect, to suggest that the whole of M. THIERS's peculiar system of finance should remain in abeyance until all existing Treaties of Commerce have expired. The MINISTER of COMMERCE replied that, as to the taxes on raw materials, it was impossible any longer to regard them as a source of revenue; and that for financial purposes the law of 1872 must be regarded as a dead letter. But the proper treatment of the Treaties of Commerce presented some difficulty, for negotia-

tions had been carried on by the late Government with Italy, England, and Belgium, and the new Government was not prepared, without further consideration, to state how far it found itself pledged by what had been done. Meanwhile a Committee of the Assembly appointed to inquire into commercial affairs has made a suggestion which, if it could be carried out, would remove many difficulties. It is, that the Treaties of 1860, without being formally renewed, should be put practically into operation by what the Committee term "tacit reconduction." Thus the whole of M. THIERS's work would be swept away at one stroke; and although it is not known whether the Ministry will adopt the suggestion, the MINISTER of COMMERCE has taken an important step in this direction by announcing his readiness to abrogate the new Merchant Shipping Act, by which a heavy differential duty was imposed on English vessels. This Act, which was one of the chief gems of M. THIERS's Protectionist policy, was intended to give new life to the languishing commercial marine of France; but practically it has had a totally opposite effect. It has thrown French trade into confusion, it has diverted commerce from French to Dutch and Belgian ports, and, while it has produced great irritation among English shipowners, it has conferred no benefit on the owners of French vessels. The Minister, therefore, had the satisfaction of at once taking a step which he could rely upon as being regarded by England as a friendly act, and at the same time gratifying the French commercial public. In recurring to a more liberal financial policy he will have no opposition to fear from his habitual adversaries. The Left, when they supported M. THIERS in his fanciful schemes, openly avowed that they considered him totally wrong, but were prepared for temporary political purposes to support him whether he was wrong or right.

But the deficit of eight millions remains, and the first idea of the Ministry seems to have been to procure what is wanting by a new tax on business transactions and by an increase of the Registration duties. Formidable objections may be urged against looking to either of these two sources. To increase the Registration duties is simply to add to the existing heavy burdens on land; and although it would be equitable to make the landed classes bear their share of new taxation if traders were to be subjected to new taxes, the justice of the scheme would scarcely reconcile the grumbling small proprietors, in whom the new Government hopes to find its surest allies, to pay more than is now exacted from them. The tax on business transactions has almost every possible fault that a tax can have. It would be as inquisitorial as the Income-tax, and it would fall most unfairly on different sets of traders. What is proposed is that a tax of one per cent. should be levied, not on the net profits, but on the gross transactions of traders. The oftener, therefore, that a man turned over his money, the more he would pay to the State, although his profit on each transaction might be very small. Nothing could be more certain to discourage commercial activity and enterprise, as the accidental nature of his business, and not his available yearly revenue, would determine how much a trader would have to pay. So difficult is it in the present state of France to invent new taxes, that attention has been naturally directed to a method of avoiding altogether the necessity of new taxation. The State has arranged to repay the money lent it by the Bank of France by annual instalments of eight millions sterling. If the State did not pay in the coming financial year this instalment, there would be eight millions less to provide from taxation, and thus the Budget would be balanced without a farthing of new taxation being requisite. This mode of getting out of the difficulty is delightfully simple, and the attraction of diverting these eight millions from their appointed object is so great that inventive financiers are always proposing schemes for turning this fund to account in their own fashion. M. POUYER-QUERTIER, for example, has recently suggested that it might be very conveniently used for paying off the purchase-money of the Eastern railways; and as the Government pays only one per cent. to the Bank, while it pays six per cent. interest to every one else, there is evidently no end to the ways in which it might be shown that the State would reap an immediate gain if it postponed the repayment of its debt to the Bank. But to propose such a postponement is really to take a very serious step. Until its debt is repaid, the Bank cannot resume cash payments; until cash payments are resumed, France is cut off from a most important portion of commercial business. There used to be two centres of exchange operations in Europe, London and Paris; but since the war of 1870 exchange business has been altogether diverted from Paris, and London has become the one centre of European operations, as the nature of their business requires that dealers should be certain of being paid, if they need it, in gold. It is not, therefore, surprising that the Bank of France should regard with the greatest regret the loss of the important position it once held, and should insist that no sacrifice can be too great to enable Paris to become once more the rival of London. Men of great financial ability are sure to urge this view in the Assembly, and no one could be better aware than M. MAGNE how much he is abandoning if he defers the resumption of cash payments to an indefinite period. Should the Ministry make the proposal, it will probably carry it, for the only alternative is to invent new taxes, and this is beyond the power of an Opposition. But it is certain that the proposal would be made with the greatest reluctance on the part of the Government, and would be accepted by the Assembly with the severe disapproval of those in its ranks best qualified to judge of the ultimate consequences of what was being done.

THE SCOTCH CHURCHES.

THE Assemblies of the Scotch Churches would, it might reasonably be thought, present a very pleasing spectacle of active and successful Protestantism. The great mass of the nation is of one faith, and that faith is endeared to it by history, tradition, and the remembrances of great triumphs over great difficulties. In everything that elsewhere is considered to form the basis of a Christian communion the vast bulk of Scotchmen are absolutely agreed. The population consists of a million and a half Presbyterians of the Established Church, half as many Presbyterians of the Free Church, and nearly half a million United Presbyterians. Outside the Presbyterian fold there are three hundred thousand Roman Catholics, and less than one hundred thousand Episcopalians. There is no tenet that has the slightest connexion with theology or spiritual life as to which the divisions of the Presbyterian fold are at variance. What separates them is that the United Presbyterians wish the Church to have nothing to do with the State, the Free Church wishes the State to assist the Church, provided it does so on terms of which the Church approves, and the Established Church likes to be connected with the State, and is perfectly content to have the prestige of cordial relations with the Crown, and as much in the way of endowments as it can get. In spite, however, of their agreeing on ninety-nine points out of a hundred in which Christians feel warm interest, their discord as to the hundredth point is enough to develop all the vigour and fury of theological bitterness and theological hatred. It is perhaps because they agree in so much that they hate and revile each other so fiercely in the narrow field of their disagreement. The main note or mark of Scotch Presbyterianism is its intense parochialism. It is the perfect flowering of religious beadledom. The meetings of the Assemblies ring with the utterances of alternate bombast and scurrility which are so familiar a feature in the proceedings of vestries and parish Boards. There is no measure or sense of proportion in anything that is said. Any departure from the view of the speaker is spoken of as if it showed a depravity sufficient to doom to destruction a world in which such opinions can be held. Men of the most earnest sincerity and the most amiable temper seem to bid good-by to common sense altogether when they come within the deteriorating influence of an Assembly. Dr. DUFF, who has given almost the whole of a long and successful life to missionary work in India, has been acting as the Moderator of the Free Church, and a man who has seen many men and things, and who has won fame for himself and his Church by his labours abroad, might be expected to be a little reasonable when he came to preside over the meetings of his brethren at home. But Dr. DUFF is no more able to resist the demoralizing atmosphere of a General Assembly than any one else. In an opening address which filled twenty-one columns of a local journal, he touched on every subject that interested him. Among other things, he announced to his hearers that an event had recently happened which was the most critical, the most grave, and the most appalling event in the history of the human race since the fall of ADAM. Persons not accustomed to the language of speakers in General Assemblies would never guess, if they guessed all the rest of their lives, what this awful event really was. It was the election of a Mr. RIGG as a member of the School Board of Edinburgh. Nor was Dr. DUFF, to bestow on whom the title of Moderator is the only trace of humour in the proceedings, less aspiring in his language when commenting on the behaviour of the brethren over whom he was presiding. They

relieved their feelings by freely hissing the speeches of those with whom they disagreed. This, the Moderator informed them, reminded him of MILTON's hissing Devils, in what he euphemistically called "a remarkable place." No one seems to have thought there was anything odd in this. They were met in General Assembly, and therefore it seemed to them perfectly natural that they should hiss any fellow-labourer in the spiritual vineyard whose opinions on the minutest point of ecclesiastical arrangements differed from theirs, and that in return their President should tell them that they made him feel as if he were in MILTON's Hell.

A story is told that at one of these meetings a speaker remarked that the speeches of those who preceded him reminded him of his wife's tea, which was very hot and very weak. This description gives a not inaccurate, although perhaps too complimentary, impression of the speeches made at a very excited and stormy meeting of the Free Church Assembly held a few days ago. There was no tea at all in most of these outpourings. It was all undiluted hot water. Speaker after speaker rose, and so intense was the interest excited that the Free Church was on the very brink of breaking up on the point at issue; and yet any one outside the communion might read columns of these speeches as reported, and fail to gain the slightest clue as to what it was that formed the subject of quarrel. It was something so very small that it could not be put into intelligible language. And yet the quarrel was carried on at a white heat, and passion seemed destined to triumph over reason, if there was any reason to triumph over, when all of a sudden a compromise was suggested which appears totally unmeaning, and then all the Assembly declared itself happy and satisfied, and the Moderator declared that there had been a special interposition of Divine Grace to avert disruption, and prayer was offered up in thankfulness for a great deliverance. Up to a certain point the question is not wholly unintelligible. As the Established Church is rather larger in number than the two other Presbyterian Churches, and as both of these agree in thinking that the Erastianism of the Established Church is one of the most frightful things on earth, it occurred to many leaders of the two dissentient bodies that, if they united, they might do more to hurt the Established Church than they could do singly. Accordingly, for nine years there has been a movement in this direction, and the time seemed to have arrived to carry it out so far as might be practicable. But there was a minority in the Free Church which abhorred the thought of joining so dangerous a body as the United Presbyterians; and this minority threatened that, if they were outvoted, they would appeal to the Courts of Law, and claim that, as they wished for no change, all the property of the Free Church should be handed over to them as the true representatives of the communion. As the whole basis of the Free Church is its protest against the temporal Courts having jurisdiction in spiritual matters, there was something supremely audacious in this threat. But then it seemed as if the law was likely to be on the side of these illogical disputants, and it would have been an absurd termination of an attempt to enlarge the borders of the Free Church if all its possessions had passed into the hands of a minority. The promoters of union were therefore obliged to succumb, and they did this under the veil of a compromise which is totally unintelligible. This does not, indeed, impair the effect of a compromise which is merely a means of concealing defeat, and which may answer its purpose perfectly well although no one understands it. But the state of mind in which such a compromise could be accepted after so much previous opposition had raged an hour or two before is strongly characteristic. It is now arranged that, if a Free Church congregation chooses to call a United Presbyterian minister, the Presbytery shall pronounce that this call is regular and sufficient, and shall send him some special Free Church documents of which he need take no notice, but in which his silence is to be taken as implying that he agrees, and then he may minister to the Free Church congregation that wishes for him. It had previously been proposed that under similar circumstances the Presbytery should sustain the call, and this was pronounced to be so detestable a proposal as to necessitate the disruption of the Church on the part of those who perceived its enormity. The disruption seemed inevitable, and the minority had already hired a public building in which to take up their new quarters when fortunately the dinner-hour arrived. During this happy interval a conciliatory member was prompted, as the Moderator thinks, by a special interposition to suggest that the Presbytery should not sustain the call, but pronounce it sufficient. Directly those magic words were uttered the spirit of peace entered into every breast. Brothers fell blessing and melting into brotherly arms, and all was sweetness, harmony, and rapture. How this happened it is hopeless to attempt to inquire; it is more easy to enter into the feelings of one of the ardent spirits of the minority who told his congregation on the succeeding Sabbath that on reflection he would not be satisfied, that a proper building had been actually hired, and that he was of opinion that the disruption ought to have taken place.

The Assemblies of the Established Church are much more decorous, although parochialism is tolerably rampant there also. We gather from the records of recent meetings that the Church is fairly flourishing; that it at least holds its own; that it collects and spends a considerable amount of money; and that it is especially anxious for the conversion of the Jews. This was all set forth with the usual adornments, and in the usual metaphoric language. The Church was under the waves, but floating on them; beleaguered, but ready to unmask its own powerful batteries; and, in short, capable of being pictured under any images of combined adversity and success. But what really took up almost the whole time and absorbed almost the whole interest of the Assembly was a discussion of the case of Dr. WALLACE, who has a church in Edinburgh, and who has lately been appointed by the Crown to a chair in the University of Edinburgh. With the habitual injustice of theological enemies, some of those who resented his appointment as a Professor thought that they could deal him a side blow by raking up expressions which he was said to have used in the pulpit, but of which no notice had been taken until he had gained promotion. The chief allegation seems to have been that Dr. WALLACE had applied the terms "fickle, lawless, and fidgety" to the DEITY as conceived in the popular Scotch theology. But there can be nothing heretical in giving a mistaken account of other people's opinions, and it was heresy with which Dr. WALLACE was charged. At the same time, if such expressions were used in the pulpit, no greater proof could be given of the deep-seated parochialism of the Scotch ecclesiastical mind. Liberalism may be as parochial as anything else, and nothing can be in worse taste than offensive, exaggerated expressions from the pulpit intended to hold up to ridicule the opinions of ordinary believers. The Assembly had finally the good sense to put a stop to the vague proceedings against Dr. WALLACE, and to declare that if people wished to attack him they must do so in a regular manner, and prove what they asserted. There is always some kind of moderation and good sense and perception of what justice requires in a Church that is connected with the State, and the decision of the older Assembly shines by contrast with the furious babble of its younger rival about sustained and sufficient calls. But it is impossible not to see that the parochialism of Presbyterianism must in the long run destroy it in a country which, outside religious affairs, is making progress so rapidly as Scotland. One significant symptom of this is that the Established Church cannot, as its recent Reports show, get a sufficient number of candidates for the ministry. Able young men cannot in these days feel much attraction for such arenas as General Assemblies; and the laity, as it moves forward, will gradually come to regard these exhibitions of clerical thought and temper with a mixture of pity and contempt.

THE GOVERNMENT OF COMBAT.

M. BEULÉ seems destined to be the evil genius of the Duke of BROGLIE's Ministry. His first Circular to the prefects went as far as it was possible to go with decency in the way of corrupting public opinion. In England the issue of such instructions would have been regarded as tantamount to an admission that the majority in the Assembly is not supplemented by any corresponding majority in the country. In France, however, the habit of submission to the authorities is so well established that it seemed nothing more than natural that the new MINISTER of the INTERIOR should direct his subordinates how to turn this habit to account. What really puzzled Frenchmen was the omission of the late Government to take the same course. If M. THIERS had not left the electors free to choose their own representatives, it is by no means unlikely that the Conservatives would have condoned his other shortcomings; but they found it impossible to feel themselves safe under an Administration which neglected so indispensable a political duty. Consequently M. BEULÉ's first Circular was intended, not only as a manual for the new prefects, but also as an intimation to the friends of the Government that the officials in charge of the elections would no longer be allowed to disregard their duties as they had disregarded them under M. THIERS. If the Circular gave

some colour to the charge of Imperialism which has been freely brought against the new Cabinet, the Minister could at least plead that it was essential to let the Conservatives see that they had gained something by M. THIERS's deposition.

The second Circular probably means nothing more than the first, but it differs from it in the important particular of saying exactly what it means. That this distinction is not an insignificant one is clear from the impression which M. BEULÉ's language has made on the supporters of the Government. It is a well understood maxim in politics that there are many things that can be safely done which cannot be safely talked about. The French Conservatives are in the position of a candidate for a seat in Parliament who is not averse to judicious bribery, provided that his agent takes care that he knows nothing about it. It might have been whispered about that this or that Republican newspaper had been bought, and the Conservatives would only have felt a secret pleasure in the reflection that their interests were in careful hands. But to have the order to buy produced in its naked simplicity is another matter. M. BEULÉ's Circular is a virtual proclamation that Conservative principles are of so little account in the country that they can only be saved from extinction by hiring journalists to write them up; and though the Right may feel an uneasy suspicion that this is the fact, they are naturally disgusted at having their suspicions put into a shape in which they can be read to the whole Assembly. Men do not always like having their fears revealed to themselves, and in this case they have to endure the greater misfortune of having their fears revealed to their enemies. The bargain which M. BEULÉ is so anxious to conclude is now discredited beforehand. The newspapers which are "susceptible of becoming Conservative" will now have to put a bridle on their desires. Their conversion must be delayed until there has been time for the character of the arrangements in consideration of which their eyes are to be opened to the truth to drop out of recollection. However highly they may value the flow of telegraphic news which the Minister promises to the journals which support his policy, they must necessarily be shy of profiting by it. The Opposition journals will take care that the terms on which it is to be obtained are sufficiently paraded before the public, and a newspaper which is known to have been bribed is hardly worth the cost of bribing. Altogether, M. BEULÉ will perhaps think it best to postpone the organization of his new department. The publication of this unfortunate Circular is probably due to M. BEULÉ's injudicious haste to make use of his new machinery. He has been dismissing and appointing prefects at such a pace that he can hardly have known whom to trust and whom to distrust. If he had waited till the reconstruction of the staff was complete, the chances of disclosure would have been fewer. He would have had time to go carefully over the list of nominations, and any prefect betraying the nature of his instructions to M. GAMBETTA would have imperilled his whole future career. As it is, it is more than possible that the Circular has fallen into the hands of some official who had already been dismissed and was only holding office until his successor came to relieve him, or who knew that his stay in office would be at an end as soon as M. BEULÉ had acquainted himself with his antecedents. To communicate its contents to the leader of the Left was not only, therefore, an act of pleasant revenge on the Government, it was also the establishment of a certain claim on the Opposition whenever they are next in power. It is difficult to say how much injury to the Ministry this discovery may not do. It has already cost them the services of a useful subordinate, and it may yet lead to the retirement of M. BEULÉ himself. We can hardly believe that the Duke of BROGLIE has so entirely forgotten his Liberal training as to approve of this wholesale purchase of the provincial press. He is too much a victim to a blind fear of revolution to be very careful as to the means employed to stave it off, but he is probably as unwilling as his supporters to have the nature of these means too coarsely brought home to him. His relations with the colleague whose carelessness has caused this annoyance can scarcely be as pleasant as they were before, and if the change should induce M. BEULÉ to resign his office, the effect on a coalition built up of such incongruous materials may be unexpectedly disastrous. At all events, the debate of Tuesday proved that the Opposition could command, at first starting, and at the call of their least trusted chief, a compact minority of 308 votes.

The impression conveyed by this remarkable document is as little favourable to the wisdom as to the honesty of the Ministry. In so far as M. BEULÉ represents their views—and if he is allowed to remain in office after taking upon himself the full responsibility of the Circular, he must be supposed to represent them completely—it is clear that they have not profited in the slightest degree by the experience of their predecessors. One principal source of the weakness from time to time disclosed in the seemingly strongest Governments in France has been the absence of any independent public opinion in their favour. They have had servants of all kinds ready to do their bidding so long as they were paid for it, but they have had no real friends. And one main cause of this friendlessness has been their anxiety to buy support instead of waiting for support to offer itself. The aid of a single newspaper voluntarily given on public grounds is more useful than the advocacy of a dozen when it has been secured at a figure perfectly well known to all who care to find it out. But if every paper is sounded by the prefect in order to ascertain whether it is willing to be bought, such independent journalism as exists in the French provinces naturally drifts towards the Opposition. It does not get any advantage from taking the part of the Government because it rejects the Government shilling, and yet every word it says in defence of the Government exposes it to the imputation of being in the Government pay. If it casts in its lot with the Opposition, it is no worse off in respect of special news, or whatever else be the coin in which the Government pays its lackeys, and it has at least the credit of being independent. The fallacy which runs through M. BEULÉ's second Circular is identical with that which was apparent in his first. He thinks that support is just as valuable when it merely expresses the self-interested calculations of those who render it as when it expresses their genuine wishes. A vote, in M. BEULÉ's estimation, is equally a vote whether it be given at the bidding of the Prefect or at the bidding of the voter's own convictions. A favourable article in a newspaper does the same good to the Government if it has been paid for in cash or in telegrams, as if it has been prompted by the unbiassed wish of the conductors of the journal to see the Government strong and prosperous. Those who reason in this way forget that hired advocacy usually fails the Governments that trust to it at the very moment when they need it most. So long as the Government does well to itself, the newspapers in its pay will speak well of it; but as soon as it becomes uncertain how long a Government will retain the control of the cash-box, it is essential to its newspapers to shake themselves free of a connexion which threatens to become actively injurious to their prospects. The Duke of BROGLIE's Ministry has lost no time in making the accustomed blunder with more than the accustomed pomp and circumstance. Under the Empire a Circular to the same purpose might have been written any day, but it would never have been written in the same bald and undisguised language. The plagiarists of the Empire outdo, but do not improve upon, their model.

THE JUDICATURE BILL.

THE debate on the second reading of the Judicature Bill has happily cleared away nearly all the fogs and mists with which the controversy had been clouded. The suspicion which had been very needlessly entertained that the suggestions of the Equity Bar were prompted by covert hostility to the measure has been scattered to the winds. Every Equity lawyer who spoke in the House declared his cordial adhesion to the principle of the concurrent administration of the whole law of England in every branch of the judicature, and it is at last well understood that the LORD CHANCELLOR has found, as he ought to find, his warmest, though not his least critical, supporters in the ranks of his own Bar. The speech of the ATTORNEY-GENERAL in introducing the Bill, and his observations at the close of the debate, have supplied the most complete guarantee of the intention of the Government to introduce or accept such amendments as can be shown to be real improvements in the confessedly defective machinery of the Bill. And it is especially satisfactory to hear from the ATTORNEY-GENERAL that Mr. GLADSTONE and Mr. LOWE are satisfied that this is not a matter on which they should higgle about money, and that if the thing is worth doing, it is worth paying for to do it well. Of course this does not mean, and ought not to mean, reckless expenditure; but it must mean that the new Court is to be constituted with a view to the utmost possible efficiency, and not merely with the idea of getting the best tribunals that can be got at the price now paid.

After such assurances there was no room for opposition, and the Bill was read a second time with cordial unanimity.

The subordinate question whether the important amendments which are promised shall be settled in Select Committee or in Committee of the whole House turned merely on considerations of convenience. There is much work to be done, and we are not quite sure that it would not be done more rapidly over a Committee Room table than on the floor of the House. There is weight, however, in Mr. WATKIN WILLIAMS's observation, that it would be very difficult to get the lawyers together in the morning, and in the present temper of the House we may fairly count upon a full discussion of the clauses when the House gets into Committee. It is a great point gained to have nearly all questions of principle absolutely concluded. The ATTORNEY-GENERAL not only conceded, but welcomed with genuine enthusiasm, the proposal that the Common Law Divisions should be strengthened from the outset with an infusion of Equity trained colleagues, and he was able to convey the assurance, that this was desired by none more keenly than by the Common Law Judges themselves.

On the constitution of the Court of Appeal the assurances of the ATTORNEY-GENERAL were equally satisfactory. The permanent staff is to include three Equity Judges in addition to the Lords Justices. This will make a well-balanced Court, though it may be doubted whether they will find time to get through their work without splitting themselves into inconveniently small divisions. The question of the amount of strength which must be allotted to the Chancery Division to make it capable of dealing efficiently with the work assigned to it, has not yet been fully discussed; but no one impugned the broad principle insisted on by Mr. FOWLER that such strength should be given as to ensure the introduction of *viva voce* evidence, to save the jury box from being once more consigned to the lumber-room, and to get rid of the scandal of delegating Judges' work to Chief Clerks in Equity and to Registrars in Bankruptcy. Amendments with these objects ought to be, and no doubt will be, jealously watched to guard against excess; but we may assume after what has passed that whatever is clearly shown to be essential to efficiency will be granted without demur.

One very important matter—that of procedure—will require a good deal of careful and rather minute attention. On this topic also the ATTORNEY-GENERAL has laid down a doctrine which every one, we think, will subscribe to. He referred, as the LORD CHANCELLOR had done before him, to the cause which more than anything else led to the failure of LORD HATHERLEY'S measures; and with the entire concurrence of the House, declared that in his judgment the lines on which the future procedure of the Court is to be built ought to be clearly laid down in the Bill itself, and that nothing should be delegated to any extra Parliamentary authority except the duty of filling up details in accordance with principles definitely indicated in the Bill and its schedule. At present it is admitted on all hands that the schedule does not perform the function which belongs to it. It leaves unsettled the very first principles and fundamental rules of pleading to be observed, and it would be quite possible without straining a word of it to fill it up in such a way as to reproduce the essence either of Chancery pleading or of Common Law pleading at the will of those to whom the duty of filling in the details might be committed. This would be in substance the same delegation of legislative power which was so much objected to in LORD HATHERLEY'S scheme; and however difficult it may be for the House of Commons to deal with such matters in Committee, the Bill will not be what its framers intend it to be unless the schedule is so far remodelled as to settle once for all the broad outline at least of the procedure to be substituted for the two antagonistic systems which are now in operation. In doing this it will not be necessary to descend into anything which can fairly be called detail, and the work will be substantially done when satisfactory and decisive answers are given to the following questions:—

1. Is a plaintiff to have the option either of commencing proceedings by a writ, to be followed after the defendant's appearance by a printed statement, or, if he prefers it, of serving both statement and writ in the first instance, and moving, it may be, for an injunction without an hour's delay? We can see no reason why it should not be open to a plaintiff to choose the one or the other method according to the nature of the case which he brings before the Court. But whichever way it is determined, the point ought to be settled by the schedule.

2. Are pleadings to be "open pleadings," that is, plain statements of fact, or are they to be "issuable pleadings" in the technical sense that they are to be framed so as necessarily to lead to definite specific issues, and to be subject to the old rules of special pleading by which this end is secured? This is a question of primary importance, and for many reasons we are satisfied that the Judicature Commission was right in deciding in favour of open pleading. The great value of it is that it ensures all the facts being before the Court, and almost excludes the possibility of a suitor's cause being lost by a slip on the part of his pleader. The objections urged against it are that it leads sometimes to prolixity, and that it does not produce ready-made issues for a jury to decide upon. The first of these defects may be readily cured by punishing undue prolixity with costs, and the other by adopting the practice which has answered so well in the Divorce Court, of always trying causes on specific issues prepared by the parties and settled in case of difference by the Court. On the other hand, the merit of "issuable pleading" is that it is thoroughly scientific, or rather was so before the Common Law Procedure Acts tampered with it, and that it does in theory at any rate necessarily lead to definite issues. Unfortunately, these issues are too often general issues, under which juries decide upon mixed facts and law, and the scientific precision of the method is only attained by the suppression of the real facts until the hour of trial, and by the consequent risk of failure either from surprise or from a pleader's want of skill. One more consideration which seems to us conclusive in favour of open pleadings followed by issues settled by the Court is that verdicts would then always resemble special verdicts, and we should escape the scandal of new trials for misdirection. It is very monstrous that when a Judge lays down the law wrongly at Nisi Prius there should in many cases be no way of correcting the error except by directing a new trial of facts which have been well and fairly tried before. So long as juries are allowed to find verdicts on general issues involving mixed fact and law, this scandal cannot be cured. With settled issues and special verdicts, the Judge and the jury severally perform their functions, and the error of each may be separately corrected.

3. Are defendants to be at liberty to impose on a plaintiff the costly obligation of proving facts which cannot honestly be disputed? This is done now habitually at Common Law by pleading a traverse of every material allegation. It could not be done if pleadings were verified by oath as Answers are in Chancery, and as all affirmative pleadings are in the Divorce Court. It seems to us that an affidavit verifying all pleadings would save much oppression and expense, and greatly simplify procedure by excluding false issues.

4. Are interrogatories to be used really for discovery, as they are in Chancery, or only for verification, as they are at Common Law? At present the jurisdiction is absolutely the same in all our Courts, but the practice has been so moulded that a party to an action seldom gets any substantial discovery, though he does often assist his case after issue joined, by forcing admissions from his adversary. In administering relief against fraud, and in other branches of Equity, the Court would be paralysed if the use of interrogatories were restricted, as it practically is at Law, and as the schedule seems designed to restrict it. And one other little amendment on the Chancery practice as to discovery would be of incalculable value. At present a plaintiff or defendant may be compelled to produce on oath all material documents; but his oath is by affidavit on which there is no cross-examination. The amount of falsehood, sometimes wilful, and more often careless, to which this immunity leads is quite frightful. Of all affidavits in the world, affidavits verifying schedules of documents most require the safeguard of cross-examination, and this ought to be provided for by the schedule.

We have indicated these as among the most important points to which the labours of the Committee will have to be directed—not at all as exhausting the subjects on which amendments may be called for. The whole subject of references, to which Mr. HENRY MATTHEWS specially directed attention, will need much care to prevent it from degenerating into a wholesale delegation of Judges' work to inferior hands such as we have witnessed in the Court of Bankruptcy. The provisions for local registries are also open to the objection that they will often only substitute provincial for metropolitan agencies, that they will localize just those steps—the filing of documents and the like—in which distance does not add to cost, and that they will sever the subordinate officers of the Court from the Judges, who ought always to be accessible to them. We have not, however, dwelt upon these matters, because there seems less fear of their being overlooked than there is of the schedule of procedure being turned out in an unworkable shape.

LORD RUSSELL ON THE GOVERNMENT OF IRELAND.

LORD RUSSELL'S Bill for the regeneration of Ireland is a little disappointing. Two years ago he propounded a remarkable scheme for the establishment of a Heptarchy, of which four component States were to correspond with the existing Irish Provinces. The plan was to be more fully explained in an intended pamphlet which Lord RUSSELL, on mature consideration, has either not written or not published. When he gave notice of a Bill for the improvement of the government of Ireland, it was naturally supposed that it would provide for the establishment of four little Parliaments which would administer a modified Home Rule under Imperial control. It was much better that a hasty project should be deliberately abandoned. Lord RUSSELL is not on a level with irresponsible politicians whose principal function is to raise an occasional laugh at their own expense. A nation which respects itself includes in its susceptibility to ridicule statesmen whom it has entrusted with power through a long series of years. The present Bill provokes a smile only as an anti-climax. Lord RUSSELL cannot be accused of exaggerating the difficulty of governing Ireland; but it is strange that he should anticipate any material improvement from the abolition of the office of Lord-Lieutenant. A Secretary of State for Ireland could scarcely exercise any functions which are not at present discharged by the Secretary to the Lord-Lieutenant; and if it is intended that he should reside permanently in Ireland, he would only be a less ornamental Viceroy.

The opinion that periodical riots are discreditable to Belfast cannot be condemned as a paradox, but it is difficult to understand how the disturbances can be attributed to the viceregal form of government. As Lord KIMBERLEY remarked, local authorities, unless they are altogether superseded, will be sometimes supine or otherwise inefficient. As soon as it was found that the aid of the central authority was required at Belfast, no time was lost in providing a sufficient force for the suppression of the riots. The O'KEEFFE embarrassment seems to be still more remotely connected with the administration of Ireland through a Lord-Lieutenant. It has been thought fit to entrust the control of the system of education, as far as it is supported by public funds, to a separate body of Commissioners. A Committee of the House of Commons is now engaged in an inquiry into their conduct; and in the meantime popular opinion inclines to censure their supposed deference to the Roman Catholic hierarchy. If it were thought proper that the superintendence of schools should be transferred to a Cabinet Minister, Lord HARTINGTON might have the satisfaction of defending himself instead of apologizing for the Commissioners. The prevalence of agrarian crime is not the fault of the Lord-Lieutenant, and Parliament might, if it thought fit, dispense with the unanimity of Irish juries. Lord RUSSELL oddly limits his proposal that the verdict of two-thirds of the jury should be valid, by excepting from the operation of the new enactment all capital crimes. It is in cases of murder that juries are most dishonest and most obstinate, and hired assassins are not entitled to any exceptional chance of escape.

With a creditable and characteristic respect for precedent, Lord RUSSELL cites three high authorities in favour of his proposals, or in support of his arguments. Lord SOMERS held that the powers of the Scotch Privy Council ought not to be continued after the Union. Mr. BURKE concurred in other doctrines bearing on the enactments of the Bill; and, above all, Lord RUSSELL himself proposed the abolition of the Lord-Lieutenancy four-and-twenty years ago. The Privy Council to which Lord SOMERS objected was composed of Scotchmen, who would probably, if they had retained independent power, have thwarted the Imperial Government. Lord RUSSELL'S former proposal had, it appears, been supported by all the principal leaders of both parties, with the exception of Mr. DISRAELI; but the clamour with which the scheme was received in Ireland induced the Government to abandon the project. It would be highly imprudent to afford at present any new pretext for Irish agitation. If Dublin Castle were suppressed, it would be asserted that English jealousy had abolished the last remnant and shadow of Irish independence. There is no reason to suppose that the institution has at any time been unpopular with the community whom alone it concerns. The mock splendour of a delegated royalty may excite the contempt of the happier frequenters of genuine levées and drawing-rooms; but if the Irish gentry or citizens take pleasure in attending the receptions of the Lord-Lieutenant, there is no reason for grudging them a harmless amusement. In more practical matters a certain advantage attaches to the presence in Dublin of a local executive authority who is not visibly the mere delegate of the Imperial Government. When it becomes necessary to proclaim districts, or otherwise to use the powers of coercive Acts, the Lord-Lieutenant incurs less odium than a Secretary of State by issuing the proper orders. There is no question of a double or divided government, for the Lord-Lieutenant never affects in the smallest matter an independent position. Since the days of Lord ANGLESEY, who was summarily recalled because, as the Duke of WELLINGTON said, he appeared to have been bitten by a mad Papist, no English Minister has been encumbered with a contumacious representative in Ireland. It may be doubted whether Lord RUSSELL himself relies seriously on the efficacy of his proposed remedy for Irish evils. A great part of his speech would have been equally applicable to any other plan for the discouragement of Irish disorder. It is true that the arrogant and intolerant minority of Lord RUSSELL'S younger years now requires protection against the more intolerant and more arrogant majority; but it is impossible to redistribute political power which is unfortunately in a great part of Ireland divided between agitators and priests. The demagogues have of late been unusually passive, and there is no advantage in providing them with a fresh cause for clamour and disturbance. It would be far better to abolish an imitative and formal substitute for royalty than to establish legislative Assemblies in the four Provinces; but the two successive schemes proceed on diametrically opposite principles. It cannot be right both to decentralize the Executive Government and to convert it into a kind of Federation. Lord RUSSELL'S temper inclines him to the conclusion that he is capable of providing a remedy for any political evil which he may discern; but Irish perversity and disaffection would survive any administrative changes.

Lord KIMBERLEY answered Lord RUSSELL in the conventional language which was best suited to the occasion; and Lord GRANVILLE vied with his colleague in professions of respect for the promoter of the Bill, and of inability to form a hasty judgment on so important a proposal. There is no reason to fear that the Bill will be seriously prosecuted, for the late period of the Session would alone provide a sufficient excuse for abstaining from immediate legislation. Lord MONCK would have acted more prudently if he had refrained from any defence of the conduct of the Education Commissioners. His explanation of the reasons for dismissing Mr. O'KEEFFE from the management of the Callan school is both surprising and unsatisfactory. It had been supposed that the priest of every parish was either really or professedly an official manager, and that the apology for the Commissioners was their belief that after his suspension Mr. O'KEEFFE no longer possessed the necessary qualification. It is an error to suppose that the State compromises its own dignity or supremacy by recognizing certificates which are conferred by independent bodies. It is sometimes provided in Acts of Parliament that certain functionaries shall be nominated by the Royal Society, or perhaps by the President of the Institute of Civil Engineers. If the President were to be removed on a charge of having violated some rule of the Society, the Government would probably recognize his successor without inquiring into the reasons of his deposition. The Irish Education Commissioners had at least a plausible case when they declined to decide on the validity of Cardinal CULLEN'S Legatine authority. A *primâ facie* proof of suspension or removal might raise in their minds reasonable doubts of Mr. O'KEEFFE'S title to his office. Lord MONCK now explains that the Commissioners in the exercise of their discretion removed Mr. O'KEEFFE from the management, not because he had been suspended from his cure, but on the ground that his moral influence had been impaired by the suspension. It is a comparatively simple proposition that the Roman Catholic hierarchy are the proper interpreters of their own regulations; and it might be forcibly contended that every parish priest had covenanted to abide by the laws of his Church. If Lord MONCK'S statement is accurate, the Commissioners decided that Mr. O'KEEFFE'S character had been injuriously affected; while at the same time they declined to inquire into the justice of the sentence which conveyed the stigma. As Lord CAIRNS suggested, it would, on Lord MONCK'S showing, have been but equitable to allow Mr. O'KEEFFE to state his case before he was punished for a supposed loss of moral influence. It might be unnecessary to hear evidence on the undisputed fact of the suspension; but the Commissioners exercised a judgment of their own when they took into consideration the moral consequences of the sentence. Even if there has been in this case a miscarriage of justice, some part of the administration of Ireland must be exercised

by local functionaries, whether they are called Commissioners of Education or Lord-Lieutenants. There is little advantage in proving that the present government of Ireland is not ideally perfect.

MR. HARCOURT'S MOTION.

THE discussion of the Masters and Servants Act, and of the law of conspiracy, on Mr. VERNON HARCOURT's motion was singularly indefinite. It must be confessed that it is not easy to avoid confusion in treating of the necessarily vague law of conspiracy. As Mr. HARCOURT said, it is anomalous that several circumstances, each in itself lawful, should collectively constitute an unlawful act; but in this case the proceeding which is described as lawful means something which is supposed to be morally wrong, although it only becomes technically criminal when it has been concerted among several persons. Neither Mr. HARCOURT nor any other critic of the actual law had proposed to undertake any new legislation on the subject up to the time of the debate; but Mr. HARCOURT has since, on the invitation of Mr. GLADSTONE, introduced a Bill to amend the Law of Conspiracy as applied to Masters and Servants. In the meantime a heavy responsibility is thrown on the Courts which administer the law; and it is unfortunate that in one well known case an able and upright judge should have fallen into the error of passing an excessively severe sentence. Justice BRETT apparently considered that the conspiracy of which the gas-stokers had been convicted was extraordinarily culpable; but it was only by a far-fetched process of reasoning that the inconvenience which might have resulted from their combination could be regarded as the measure of their guilt. The workmen employed by the Gas Companies had contracted, not to light the streets of London, but to perform a certain kind and amount of labour, under the usual conditions of similar contracts. They were entitled to think that in refusing to continue their service they incurred at the utmost the statutable penalties for breach of service, and consultation or consent amongst themselves was necessarily incidental to the offence. The severity of the sentence can only be explained on the assumption that the workmen had themselves calculated on the extent of mischief which they were likely to cause as an instrument for the coercion of their employers; nor can it be doubted that the agitators who organized the strike trusted to their hold on the fears of the Gas Companies and of the community at large. It would nevertheless have been better to treat the refusal of the men to work as an ordinary case of breach of contract. Down to the date of the sentence the general feeling of indignation had rendered even the Unionist leaders unwilling to justify the outrageous conduct which had been instigated by some of their agents. From the time when the gas-stokers were condemned to imprisonment for a year the agitators have profited by a reaction in favour of the men.

Mr. HARCOURT would have been justified in defending judges and magistrates at the expense of the Legislature if the amount of punishment were not necessarily left in some degree to the discretion of the proper tribunals. It is impossible to define beforehand the moral culpability of any but the most distinct and simple crimes. A man who wilfully kills another without sufficient legal excuse incurs capital punishment. Some murders are undoubtedly more atrocious than others; but every murderer is supposed to deserve the highest penalty known to the law; and no severer sentence can be passed on the worst of criminals. No legislative wisdom can determine the guilt of an assault or of a threat; and even manslaughter may be justly punished with a day's imprisonment or with penal servitude for life. The judge is necessarily responsible for the apportionment of punishment to guilt; nor can he answer, as Mr. HARCOURT suggests, to the question why he passed too severe a sentence, that Parliament bade him do it. The law of conspiracy cannot be accurately said to be tolerable only because it is not executed. If Justice BRETT's direction to the jury was sound in law, it was still open to him to have sentenced the defendants to imprisonment for a month or six weeks, and not for a year. "The system of piling up misdemeanour on misdemeanour, "and crime upon crime," is unavoidable, if regulations necessary to the comfort and good order of society are to be enacted and enforced. Mr. HARCOURT, who is never tired of denouncing the penal legislation of the Parks, was shocked because the police summoned persons for skipping with a rope, for fishing for minnows in the Serpentine, or for using soap in bathing. To less zealous sticklers for constitutional liberty it seems not unreasonable that a piece of water in a public Park should be protected against pollution, or against any mode of user which interferes with the general enjoyment. Grown-up men and women who skip in public are scarcely entitled to the sympathy of the respectable part of the community. It is perfectly easy to comply with reasonable by-laws, which can only be enforced against perverse minorities by moderate fines with the alternative of imprisonment. Skipping in the Park is *malum in se*, and the use of soap is *malum prohibitum*.

The unlucky sentence on the feminine rioters of Chipping Norton was not justly described by Mr. HARCOURT as a natural consequence of rash and inconsiderate legislation. In any country where laws for the protection of person and property exist, threats of violence and menacing demonstrations interfering with freedom of action must be regarded as criminal, and seven days' imprisonment would be an unduly lenient minimum of punishment. In the particular case it would have been just and prudent to treat female rioters with an indulgence which can scarcely be provided by law; but there are occasions on which infuriated women are more savage than the worst of men. The THÉROIGNES of the first French Revolution were, if possible, more bloodthirsty and brutal than the male assassins with whose aid they regenerated society. The labourers' wives at Chipping Norton have happily not reached the same level of degradation, and they may even be excused for the probably apocryphal accounts of their sufferings which they have since furnished to sympathetic reporters. A hardworking village scold has seldom an opportunity of becoming a martyr and heroine. It was an odd circumstance that the debate should have mainly turned on a state of the law which has been unaffected by recent enactments. Lord ELCHO clearly showed that the Masters and Servants Act had greatly mitigated the severity of the law, and neither the Chipping Norton termagants nor the gas-stokers were convicted under the provisions of the Act. Mr. BRUCE answered the demands of the late Hyde Park meeting rather than the resolutions proposed by Mr. HARCOURT, when he announced that the Government was not at present prepared to alter the Masters and Servants Act. The relief which the new law affords to the working class is strikingly illustrated by the returns of convictions. Mr. BRUCE showed that in the year before the Act was passed, 7,557 persons were convicted of breach of contract of service, and that in 1872 the entire number of convictions was 742. It may be questioned whether unlimited license in the violation of contracts is beneficial to the workmen themselves. If debts were not recoverable at law, pecuniary accommodation would be generally withheld; and impediments to the conduct of business, caused by distrust of the fidelity of workmen, would not tend to raise wages or to increase the demand for labour. The policy and the justice of applying a severe scale of punishment when several workmen break their engagements in concert is more than questionable. In almost every case of desertion from service which occurs, the offence might be brought within the elastic definition of conspiracy. The Unionists are anxious, however, not only to be enabled to commit breaches of contract with impunity, but to be relieved from the penalties at present attached to the intimidation of their fellow-workmen. The nature of this demand is practically illustrated by a case which has just been tried by Baron PIGOTT, and in which three carpenters were sentenced to imprisonment, one for nine and the other two for six months, for combining to plague and worry a non-Unionist workman. The poor fellow was hooted at, pelted with pieces of wood, knocked down, knelt upon so as to be nearly suffocated, and beaten. His life was made intolerable, and he had to quit his employment. Baron PIGOTT very justly observed that, if there were no law to punish such outrages, the weak part of society would be exposed to the worst kinds of tyranny and oppression.

Some incidental suggestions made in the course of the debate were not unworthy of attention. Dr. BALL objected both to appeals from Courts of Law to Parliament, and to the supervision claimed by the Law Officers over the decisions of Judges. The practice had, according to Dr. BALL, first commenced in Ireland; and he added that vicious principles applied in Ireland invariably came home to England to roost. The SOLICITOR-GENERAL, in answer to the challenge, claimed a right of censuring the Courts, and with better reason he protested against the habit of paying personal compliments to judges. Mr. CHARLES BULLER used to say that, if he wished for an unqualified eulogy on his character, he would induce some member of the House of Commons to make a formal attack on his conduct, in the confidence that all his friends would immediately vie with each other in complimentary exaggera-

tion. In the opinion of the SOLICITOR-GENERAL, blame is the correlative to praise; and it would undoubtedly be inconvenient to engage in a Parliamentary discussion of the demerits of high legal functionaries. When the SOLICITOR-GENERAL becomes Master of the Rolls, it will be proper to remember his repugnance to any Parliamentary recognition of his judicial qualifications. The authority of criticisms passed by the Law Officers on judicial sentences will depend mainly on the personal qualifications of the respective parties. Justice BRETT once held the same office which is now adorned by Sir G. JESSEL; and any legal competence which he may formerly have possessed can scarcely have been deteriorated by judicial experience. Mr. HENRY JAMES justly condemned any expression of sentiment which might possibly be influenced by considerations relating to the future elections. From this time to the end of the present Parliament, measures and speeches will be more or less coloured by personal hopes and fears. Recent experience seems to show that members either believe their constituencies to be comparatively rational, or at least have convinced themselves that crotchets are chiefly held by insignificant knots of agitators. It would be especially undesirable that laws affecting capital and labour should be discussed with a view to popular favour. It was perhaps well to give the House of Commons an opportunity of intimating disapproval of an excessive sentence. No light was thrown on the state of the law or on the expediency of altering it, although both the Law Officers declared their disapproval of the charge of Justice BRETT, and their preference for a more recent exposition of the law by Justice LUSH. Mr. BRUCE's statement was the most satisfactory feature of the debate.

CANADIAN PROGRESS.

NOW that Prince Edward Island has resolved to throw in its lot with the Canadian Dominion, Newfoundland is the only British colony in North America which holds aloof from the Union; and the adhesion of Newfoundland may be regarded as only a question of time. It is true that Newfoundland has from the first been perfectly consistent in its sullen indifference and contempt for the whole scheme, and there is no immediate prospect of any change in this attitude. But consistency may be too dearly paid for, and Newfoundland will probably come to the conclusion that it is hardly worth while to go on sulking outside the Union now that all its neighbours have gone in. Besides, there is a sort of magnetic attraction in the larger body which has become more powerful as the process of agglomeration has gone on, and which it will be difficult for a single isolated particle to resist. Ever since the plan of confederation was first taken up in earnest, the malcontents have been gradually coming round. Some held off from pride, some from prejudice, and some perhaps because they thought their coyness would command its price. If this last consideration at all prevailed in the minds of the Prince Edward Island people, they are probably disposed to congratulate themselves on the success of their tactics. They have certainly got very good terms out of the Dominion, and much better than they would have been able to obtain a few years ago. They are to be entitled to run up liabilities at the rate of fifty dollars a head, and as they cannot be expected to do this all at once, they are to receive from the Government five per cent. on the difference between their actual and their authorized indebtedness. Among other advantages to be derived from the Union will also be the maintenance of an efficient steam service all the year round between the Island and the mainland of the Dominion at the expense of the "general Government." It cannot be said that the Dominion gains much by this transaction in the way of a substantial addition to its resources; but the new sea-board will be useful from a military as well as a commercial point of view, and of course it is well to carry out the policy of amalgamation thoroughly, and to bring every patch of British soil under the control of a single Government. Even if the process be a costly one, it will be more than repaid by the avoidance of future complications, as well as by the impulse which unity imparts to national vigour and productiveness. Now that Newfoundland alone is wanted to complete the Union, there will probably be a high bid for its adhesion. It is understood that the opposition to amalgamation is led by the Roman Catholic priesthood, but the religious difficulty ought not to be more formidable in Newfoundland than in Canada. Practical experience has disposed of most of the objections which were formerly urged to the centralization of affairs. No difficulty has been found in reconciling the superior authority of the general Government with the fullest exercise of local rights and liberties in all strictly local matters. At first sight there may appear to be something awkwardly, and even dangerously, complicated in a system of administration under which a series of semi-independent States, each with a Government of its own, is governed by a general colonial Parliament and Cabinet, which in turn are under the control of the Imperial Parliament and Government of the mother-country. But it is a peculiarity of English institutions that, though they sometimes look clumsy in theory, they work capitally in practice; and, tested in this way, the administration of the Dominion has already yielded satisfactory results.

It is now some ten years since the great project of confederation was first taken up in earnest, and, though we may hope that its completion is not far off, it is still incomplete. To some this may seem rather slow work, but it is necessary to remember the magnitude of the operation, and the difficulties which attended it. What had to be done was really nothing less than to build up into a great nation a number of detached, independent, jealous, and even, in some respects, antagonistic communities. It was clear enough that the plan, if it could be carried out, would be for the good of the colonies at large; but it was also clear that it would not altogether tend to the advantage of various interests, both of a personal and commercial kind, which had their root in local narrowness and isolation. For these confederation meant simply competition in a wider field, and the prospects of competition were disquieting. The smaller States were alarmed lest they should be swallowed up by the bigger ones, and all sorts of local notables and monopolists trembled for their privileges. Differences of race, religion, and politics, provincial jealousies and commercial rivalries all had to be overcome in welding the various groups together into a compact and homogeneous system. In one notorious instance an eager advocate of a partial confederation in which he had some chance of taking the lead, opposed the larger scheme in which his province would have occupied a less prominent position, and subsequently recanted again in favour of the Union when the fact of its accomplishment was brought under his notice by the offer of a governorship. Very little reflection is required to understand that a process of this kind must necessarily be somewhat tedious. But if the work has been slow, it has at least been sure. No member of the Confederation can complain of having been coerced or cajoled into joining; each entered after full deliberation and of its own free will; and happily there are now no symptoms of lingering resentment or repentance to disturb the harmony of the family. As far as any questions have been raised as to the original terms of Union, the Dominion Government and Parliament have shown the utmost readiness to deal with them in a liberal spirit. The Act which has just been passed, transferring to the Dominion a larger share of the provincial debts than was at first agreed upon, will tend to consolidate the Union, while the credit of the general Government will enable it easily to sustain the additional burden laid upon it.

It is too soon to attempt to estimate the full consequences of the Confederation policy, but it is at least evident that it has already had an important influence, not only on the character of the British North American communities, but on their relations with the mother-country and with the great nation with whom they share the continent. Instead of a group of weak and scattered settlements, all pulling different ways, prone to provocation and impotent for defence, there is now a compact, solid, powerful confederacy, conscious alike of its strength and of its responsibilities. Whether British North America is destined to set up as an independent State, or to remain, as it appears sincerely anxious to do, in loyal brotherhood with England, there can be no doubt about the fact that it has become a nation in itself; and it is well that this should be borne in mind. Measured even by New World standards of greatness, it is a great nation with a vast territory and immense resources. Lower Canada, a country as large as France; Upper Canada, considerably larger than Great Britain and Ireland; Nova Scotia, larger than Greece; New Brunswick, equal to a pair of Denmarks; British Columbia, as large as the Austrian Empire; and the North-West Territories, covering an area about half as large as the whole Continent of Europe—here are all the elements of a vigorous and mighty State. It is characteristic of the Dominion that it combines the steadiness of an old country with the freshness, elasticity, and golden opportunities of a new one. The climate, though severe in some regions, is, on the whole, equable; and the people display a sedate robustness which is in striking contrast to the feverish excitement of their

neighbours in the South. The statistics of the recent census show a remarkable development in almost every direction—in population, trade, fisheries, and agriculture. Yet the Dominion, strong and prosperous as it is, is only in its early manhood. It is now entering on a larger, fuller, and more ambitious life, with loftier aims and more serious responsibilities. It has a great work before it, but it will be arduous and trying work, which will test to the utmost the statesmanship of its Ministers, and the patriotism of the people, and which will certainly not be free from checks, disappointments, and delays. It is satisfactory to observe the spirit in which the Dominion appears to be settling to its task. The petty and rancorous attacks which have lately been made on the PRIME MINISTER have found no echo in the country, and all classes seem to be anxious to support the Government in carrying out the enterprises which are essential to the success of the Confederation. The prudent, moderate, and generous attitude of the Dominion during and after the *Alabama* negotiations supplies the strongest proof of its loyal attachment to the mother-country.

THE SHAH'S VISIT.

WE know pretty well what will be the general nature of the remarks suggested by the Shah's visit. A few men who happen really to know something about Eastern history and manners will rejoice for a brief period in the sudden accession of popular interest in their peculiar topics; and, if they are wise, they will make hay while the sun shines. Ministers will of necessity talk in the ordinary dialect of their class, and will assure our visitor, with more or less pompous circumlocution, that we are his only true and original friends. A hubbub of allusions to the *Arabian Nights* will prove once more the omniscience of writers in popular newspapers; and, after a short time, our interest will die away, and the birth of a new hippopotamus, or the breaking out of another revolution, will absorb our whole attention. These outbursts of excitement run their course as regularly as the symptoms of a common disease, and we know all about them beforehand. But it would be of some real interest if we could tell what impression they will make upon the mind of our distinguished visitor. If he could be induced to add one more name to the list of royal authors, and set down frankly and fairly just what he thinks about us, we might possibly gain a curious insight into our own as well as our neighbour's mind. We fear, indeed, that the chances are that even in that case we should be disappointed. Probably the Shah, like everybody else under similar circumstances, would see through the spectacles provided for him, and his observations would be little more than a confused reflection of leading articles, complimentary despatches, and formal conversations with official magnates. His independent comments would, we may guess, be simply an expansion of the remark made by the sheikh in *Eothen*:—"What a wonderful people! whirr, whirr, all by wheels! whizz, whizz, all by steam!" Railways, armour-clad ships, and the ordinary list of mechanical wonders are enough to occupy even a royal mind in the brief intervals between State ceremonials. He will not be allowed time to ask seriously what it all means, till he returns to his domestic comforts; and probably he will then be content to abandon the insoluble problem, retaining only some vague impression of the wonderful bustle and confusion which are everlastingly proceeding, luckily for him, at a considerable distance from Persia. We ought, in fact, to have provided our visitor with a judicious guide. He should have been accompanied by one of those rare teachers who can pierce through the confused surface of things to the essential forces which are working below, and distinguish between the permanent and the accidental. Such a man might tell him what is the real value of this strange and noisy phenomenon which we call civilization and progress; whether, on the whole, we are a nobler set of human beings than his own subjects, with larger faculties, superior beliefs, and in a healthier social state; or whether, after all, progress means nothing but a series of changes of rather questionable value.

It would indeed be difficult to determine upon the most suitable interpreter. If the distinguished stranger went to each of our recognized teachers in turn, he would be considerably bewildered by the end of the course. Which would be the true Daniel to expound his troubled dream? Should he listen to Mr. Carlyle, to Mr. Herbert Spencer, to Dr. Newman, to Mr. Frederic Harrison, to Dean Stanley, to Mr. Spurgeon, or to Mr. Bradlaugh? Each of those gentlemen would be happy to give him a clue to the strange labyrinth in which he will find himself; but it is to be feared that beyond a general impression that there is something or other not quite right in spite of telegraphs and steamboats, he would scarcely find any common element in their teaching. We certainly are not prepared at the present moment to say which out of a vast crowd of would-be prophets approximates most nearly to the truth. The solutions of the great problem offered for our acceptance are enough to reduce any ordinary intellect to hopeless perplexity, and we do not claim to be absolutely infallible. One reflection, indeed, which we may pretty safely attribute to an intelligent visitor from a different world is the commonplace about the love which Christians bear to each other. A Darwinian might put it into scientific shape for him. The struggle for existence goes on, he might say, in one form or another all over the world. Whether we fight in gloves or with naked fists, it makes little difference. We may knock you on the head summarily, or may civilly squeeze you out of existence by a decent and well-equalised pressure; but the result is the same in either case. The strongest races will conquer the world, and the weakest will have to clear the course for them. Our proper type is the ironclad steamboat to which you have been introduced. It is not a more beautiful object than those which it has supplanted; on the contrary, it is perhaps the ugliest and most grotesque piece of work that ever succeeded in keeping itself afloat since the days of the Ark. Compared with an ancient galley, or even with one of those modern ships of the line which are still floating in our harbours, it seems to be the very incarnation of deformity. But it has the one surpassing merit that it could in five minutes reduce to helpless wreck all the other fleets that preceded it. A tough skin, and a power of hitting hard anybody who hits you, are the great qualifications for success in this world, whether for individuals or races. The type which you, our visitor, represent has a great many merits which have entirely disappeared from amongst us. You have a delicate artistic sense, which may be easily estimated by comparing a Persian carpet with the discordant colours of our British products. It is doomed to disappear before our coarser work, as certainly as wild flowers with all their beauty are suppressed by the advance of cabbages and potato fields. You still possess the secret of courteous and dignified manners. An army of British bagmen will shove you to the wall, and teach you to be as coarse and pretentious as themselves, without being one whit less vicious than you are at present. If you ask for the secret of our superiority, we shall reply, as we are bound to do, that we have the true religion and you have a false one. To be honest, however, we must add that we possess the further secret of never allowing our religion to interfere with business. We have no uncomfortable scruples about cheating you when it pays us to do so, for we have discovered that adulteration is a legitimate form of competition. If you complain of this logic, we can support our reasoning by cannon-balls in as great numbers as may be required. In one sense you owe something to the same principle which is the source of our power. Natural selection has adapted you to a climate where we cannot as yet thrive and multiply; and therefore there is no danger of our just now treating you to the same civilizing influence which has been applied to the inhabitants of the American continent. Perhaps we may some day take the trouble to govern you, if we can see our way to making a paying concern of the business; but meanwhile we shall be content to treat you civilly so long as we have our own way in everything. There is, indeed, a prospect of some further developments of policy. One of our great philosophers has recently propounded a plan for washing the black stain out of Africa by turning on a stream of Chinese immigrants. When once the system is perfected, it is obviously capable of a wide application. We shall of course occupy ourselves all that part of the planet which suits our taste, and we shall plant the remainder with the races most likely to be convenient to us. It is highly probable that in such a case some of the existing breeds will turn out to be altogether superfluous; we shall get rid of them as we should give up Southdown sheep or shorthorn cattle if a more profitable breed could be introduced, and you had better prepare yourselves for such a contingency by adapting yourselves as much as possible to our model.

Some such sermon as this would be given by many people as embodying the ultimate lesson from our experience, and that which all our parade of civility is really intended to impress upon our guests. The world is to the strongest; we are the strongest; therefore be on our side. That is the pithy syllogism expressed by reviews, and displays of ironclads, and inspections of manufactories. And it is easy to draw a pathetic picture of the representative of an old-fashioned type of civilization, half-awakened from the dreamy East, and looking upon the modern world in something of the temper of Heine's gods in exile. He sees that the struggle is somehow going against him, but does not admit that he is being supplanted by his betters. There are plenty of quack doctors who will show him how to avoid his fate. With a few missionaries, a constitutional Government, compulsory education, and the introduction of the Prussian military system, he may become as good as his neighbours; for, with those remedies, all evils may be eradicated from the world. He feels, however, instinctively that it is not a mere question of mechanism, and that a European dress, however beautiful and convenient it may be in itself, does not change a Persian into an Englishman. He wraps himself in his fatalism, and resigns himself with as much dignity as he can muster to the inscrutable decrees of Providence. Sentimentalists have reproduced the same type in a great variety of forms. The noble savage watching the landing of the Pilgrim Fathers, the Mexican confronted by the Spaniard, or the dignified Eastern staring in dumb amaze at the irrepressible European, have been described with a lavish expenditure of rhetoric. In each case we are supposed to see simplicity, nature, and good faith opposed to a form of civilization not intrinsically superior, but more thoroughly skilled in plausibly disguising Hobbes's cardinal virtues—force and fraud. The only comfort suggested is that their fate may be avenged at some distant period. When our civilization crumbles under its deeply seated corruption, some new barbarians may break up the

old order; and possibly some race which we now despise is already beginning to look upon us as the ancient Teutons once looked upon the wonders of the Roman Empire. And yet, easy as it is to indulge in the pathetic vein, and to win cheap credit for virtue by denouncing the wickedness of the contemporary world, we suspect that this is to beg the question in one sense as presumptuously as the vulgar panegyrists of progress beg it in the other. There is a certain fallacy in the mode of stating the argument. The statement that the strongest races survive is treated as identical with the statement that their survival is owing simply to brute force. All fine phrases about civilization, humanity, and brotherly love are therefore assumed to be a mere superficial varnish, covering as much brutality as has existed at any previous period. But it is plain enough that force thus used covers a great many qualities of undeniable excellence. The European races are the strongest, because they are the best disciplined and most intelligent, races in the world; and it is absurd to pretend to regret that they should occupy the world, even to the complete exclusion of some inferior populations. Nobody can be really sorry that great territories in America or Australia should support millions of decently comfortable white men instead of a few wandering tribes of naked savages, or even noble Indians of the pattern of Captain Jack and his Modocs. Nor is it of necessity lamentable that Englishmen should govern the weaker Eastern races. If our rule is founded simply on our strength, that is, so far as it goes, a very good foundation. "We are stronger than you, and therefore we will govern you," sounds brutal, because it is a formula generally employed to justify government for purely selfish purposes. But, if we add that we are stronger because we are wiser, and with a superior political and social organization, we make a statement which may be false or hypocritical, but which, if true, gives a real justification. It is desirable that the most highly developed races should govern, and strength is in a rough way the best available test of other virtues.

The real question comes at a further step in the argument, and is obviously far too complicated to admit of any simple answer. That Englishmen should be substituted for naked savages is almost a clear gain; but the means by which a desirable end is obtained may or may not involve wanton cruelty and a wasteful destruction of human beings for whom a useful though a subordinate position might possibly have been found. And in like manner, in our dealings with Eastern races, we are not to be condemned or approved simply because we choose to have our own way, but because it is a bad or a good way. The satire is generally directed against the wrong point, for the obvious reason that such satire demands no knowledge of the facts. Whether, on the whole, English influence in the East has been beneficial or injurious, whether we have destroyed more than we have replaced, or have wantonly crushed good things which might have been preserved by more tenderness, is a question on which only a very few people are qualified to express an opinion. But it is easy to denounce us as tyrannical for venturing to govern at all; which amounts to saying that we must be either tyrants or cowards. Such a mode of reading our obligations naturally implies that we are wolves in sheep's clothing; but it begins by assuming that all real government is wolfish. And yet, whatever may be said in our defence, it must be admitted that there remains much that is really sad in the process we are contemplating. Progress, whatever its value, implies loss as well as gain. Even the savage has some qualities which we cannot fully replace; and every imperfect race that goes under in the struggle for existence carries with it some charms which are henceforward mere matter of tradition. No method has yet been devised for saving all that is valuable from the wreck of ancient civilizations; and the efforts which we make so frequently in the present time to revive extinct forms of beauty in art or literature generally serve only to remind us how hopelessly dead they have become.

THE DANGERS OF THE MONEY MARKET.

ANYBODY who wishes to have a clear idea of the workings of what is called the Money Market should procure a little volume which Mr. Bagehot has just published under the title of *Lombard Street* (H. S. King & Co.), and he will there find the whole thing in a nut-shell. Mr. Bagehot contends that the Money Market is as real and concrete as anything else, and can be described in as plain words, and he has certainly given a very graphic and interesting account of it. The subject is one, it is almost needless to say, on which Mr. Bagehot writes with the authority of a man who combines practical experience with scientific study. Without attempting to follow him in his description of the various processes and agencies which go to make up the Money Market, we propose merely to bring into notice some of the dangers of the present system which have struck us very forcibly in reading his book. Within a comparatively brief period a great development, we might almost say a revolution, has taken place in the banking system of the country. In the first place, the old-fashioned private banks would seem to be gradually disappearing. In 1810 there were forty private banks in Lombard Street admitted to the Clearing-house; there are now only thirteen, although in the interval the business of banking has enormously increased. As the old banks die out, no new ones take their place. It is recognized as hopeless to try to set up a new private bank. The successful management of a bank requires qualities for the continued transmission of which from one generation to another there is no security; and a private banker who does not manage his own bank stands in a dangerous position. Moreover, the competition of the joint-stock banks is difficult to be withstood. It is perhaps idle to lament what cannot be helped; yet it is impossible to deny that the system of private banks furnished a certain guarantee of personal character which is almost necessarily wanting in all kinds of joint-stock companies. The directorial management of the latter is undoubtedly their weak point. A daring and unscrupulous general manager can do almost what he likes if the directors let him, and there is no security that the directors are capable either of seeing through his game or holding him in. Even if the directors are really honest and competent men, their supervision of the affairs of the company must, to a great extent, be extremely superficial. Apart, however, from the personal administration of banks, there is a serious danger in the system on which they are now conducted—we mean the system of cutting down reserves to the lowest point compatible with current payments over the counter, and trusting to the Bank of England to support them on an emergency. Mr. Weguelin, who was Governor of the Bank of England during the panic of 1857, brought this feature of modern banking under the notice of Sir G. C. Lewis; and Mr. Bagehot also gives an emphatic warning on the subject. "If," said Mr. Weguelin, "the amount of the reserve kept by the Bank of England be contrasted with the reserve kept by the joint-stock banks, a new and hitherto little considered source of danger to the credit of the country will present itself. The joint-stock banks of London, judging by their published accounts, have deposits to the amount of 30,000,000*l.* Their capital is not more than 3,000,000*l.*, and they have on an average 31,000,000*l.* invested in one way or another, leaving only 2,000,000*l.* as a reserve against all this mass of liabilities." In order to bring out the full extent of the evil, Mr. Weguelin should have added that, while bankers generally trusted to the Bank of England, the Bank deemed itself to be at liberty to dispose of the reserves deposited with it as it chose. Since 1857 this state of things has certainly not improved.

Mr. Bagehot describes Lombard Street as by far the greatest combination of economical power and economical delicacy which the world has ever seen; and he quotes a few figures which certainly give one a vivid and even startling impression of the largeness of the London loan-fund. The known deposits—that is, the deposits of banks which publish accounts—may be set down thus:—

London (December 31, 1872)	£120,000,000
Paris (February 27, 1873)	13,000,000
New York (February, 1873)	40,000,000
German Empire (January 31, 1873) . .	8,000,000

But the unknown deposits—the deposits concerning which no accounts are published—are also much greater in London than anywhere else. There is, in fact, more ready money available for employment in London at this moment than was ever before collected in the world. It is true, of course, as Mr. Bagehot remarks, that the deposits of bankers are not a strictly accurate measure of the resources of a Money Market. It is a matter of choice with people who have money where they will keep it, and in France and Germany, and other non-banking countries, there are vast sums which are privately hoarded up and not put in banks. But we are now speaking only of cash ready for investment, what Mr. Bagehot aptly calls "money-market money." The money which is not kept in banks is scattered about in small quantities in the hands of an infinite number of people. It is difficult to get at it at all, and it cannot be got at easily and quickly. But the English money is borrowable money, and may be had on the instant. It is only within a comparatively short time that the financial resources of London have reached this point, and they are still growing. In 1844 the liabilities of the four great London joint-stock banks were 10,637,000*l.*; they are now more than 60,000,000*l.* The private deposits of the Bank of England have increased in the same period from 9,000,000*l.* to 18,000,000*l.* The explanation of this remarkable growth is not far to seek. In the first place, domestic banking has developed greatly. Almost everybody who has an income of a few hundreds a year keeps a banking account nowadays. Every little shopkeeper has his banker. In the next place, the relation between the country banks and the London banks is closer and more intimate than it used to be. The country bankers are constantly receiving large sums, but they keep as little as possible in their own cellars. The bulk of it is sent up to London, and there is consequently a steady flow of country money into the metropolis. The effect of the Franco-German war has also been to pour money into London. Paris has now lost most of its financial importance; the Reds have frightened away the capitalists, and London has now become the great bank and settling-house of Europe. All exchange operations are centring more and more here; and though this pre-eminence has been partly gained through an external accident, it is founded on natural conditions, and will probably be maintained. The number of mercantile bills drawn upon London incalculably surpasses, as Mr. Bagehot remarks, those drawn on any other European city. "London is the place which receives more than any other place, and pays more than any other place," and therefore it is the natural clearing-house. It is probable, therefore, that the store of ready money in London will go on increasing rather than diminishing. The English have a far larger fund of this "money-market money," or loanable cash seeking investment than any other nation, and other nations find it convenient to send their reserves over here for employment. The English have a

particularly quick eye for the profitable uses of money. They may not have great foresight in this respect, but directly an opening is actually ready to be taken advantage of, they are pretty sure to see it. There could hardly be a more striking illustration of this than the trade of the Suez Canal. It was supposed that the Canal would restore the Oriental trade to the ports of Southern Europe; but in point of fact the English, who were to have been more or less ruined by it, have been the only people who have as yet got much good out of it. Up to the present time, the Canal has been mainly used by the English, for the simple reason that the English had not only the quickness to see, as soon as the thing was done, what use could be practically made of it, but the ready money at hand to build the only kind of vessels which can use the Canal profitably.

All this tends to make London enormously rich; but riches have their dangers, and we think that few people will be able to follow Mr. Bagehot in his account of the dangers which at present threaten the London Money Market with altogether an easy mind. The wealth of Lombard Street is borrowed wealth. By far the greater proportion of it is held by bankers or others on short notice or on demand, and it might all, or nearly all, be asked for any afternoon. If it were asked for in any considerable quantity, would the bankers be able to meet the demand? That is really the root-question, as the Germans would say, of the Money Market. And it is a question to which Mr. Bagehot certainly does not help us to any very hopeful or reassuring answer.

Lombard Street is, of course, an organization of credit, and it is important to observe how far credit is carried. The bankers receive the money of their customers, but they keep as little of it as possible lying by them. Bankers are both borrowers and lenders, and the money goes out almost as soon as it comes in. What money a bank cannot dispose of within its own sphere of operations, it passes on to some larger bank to be taken care of. The country bankers send their principal reserves to their London agents, and the London bankers send their reserves to the Bank of England. The custody of large sums in hard cash entails much care and some cost, and the same reasons which make it convenient for a private person to have a banker make it convenient for bankers to keep an account with another bank if they can. The country bankers keep in their tills only the minimum of cash necessary for their current every-day business. They send the rest to London, invest part of it in securities, and keep the balance with the London bankers and bill-brokers. What the London bankers and bill-brokers cannot turn to account they deposit in the Bank of England. "You always come back to the Bank of England at last," says Mr. Bagehot. But then the Bank of England is a bank too—not exactly like other banks, but still doing a banking business, and lending out much of the money that comes in. It is clear, therefore, that, if all the depositors in the country happened to take it into their heads to claim their deposits on the same day, they would not and could not get them on demand. The greater part of the money would be scattered about in the hands of people who had obtained advances from the banks, and this could not be got at in a hurry. But of course there is practically no need to provide for such a contingency as this. It may be taken for granted that everybody will not want his money at the same moment. It is enough that the banks should have at their command such an amount of ready money as would enable them on a reasonable calculation of probabilities to tide over an emergency of this kind. A panic is only a name for a sudden demand upon the bankers for hard cash. People take fright, distrust the credit of their agents, and ask to have their money given over into their own hands, so that they may see for themselves that it is really there. The question is what reserve of money is necessary in order to provide for a run of this kind. The country bankers trust to be able to get the money from London, and the London bankers trust to the Bank of England. In point of fact, however, the bankers' reserve funds are only in part to be found in the Bank of England. As soon as they are paid in there, the principal part of them at once goes out again into the hands of borrowers. "It may be broadly stated," says Mr. Bagehot, "that no bank in London or out of it holds any considerable sum in hard cash or legal tender (above what is wanted for its daily business) except the Banking Department of the Bank of England." And how much does the Bank of England hold? Not more on an average of years than some 40 per cent. of its liabilities. There is no fixed rule as to the amount of this reserve. It is just what the Directors of the Bank choose to make it. They are under no pledge or engagement as to how much it shall be, nor have they ever committed themselves by the disclosure of the principles on which they profess to deal with it. The Bank of England, as everybody knows, is limited as to the amount of notes which it can issue on Government securities, the rest of its issue being represented by actual bullion; but it is under no restraint or conditions as to the amount of its banking reserve. This reserve is the foundation of the whole credit system of the country; for the traders depend on the banks, and the banks on the Bank of England, and thus it depends on the discretion or indiscretion of the Directors of this one Joint-Stock Company for the time being whether the reserve shall be sufficient to meet the pressure of a panic, or, in other words, as Mr. Bagehot puts it, whether the country shall be solvent or insolvent. The Bank of England, it must be remembered, is a trading company, and the shareholders are by no means satisfied with their profits. The Bank of England earns only nine per cent., while the London and Westminster Bank earns twenty per cent.; but one of the reasons why the dividend of the former is lower is that it keeps a reserve of some forty per cent. of its deposits lying idle for the security of the latter, which thereupon cuts down its reserve to thirteen per cent.

It can hardly be denied that there is a real and serious danger in this state of things, but it is much easier to point out the evil than to devise a remedy. Mr. Bagehot seems to think that some sort of definite obligation should be imposed on the Bank in regard to the amount of its banking reserve, but he admits that he can suggest nothing more definite than an "apprehensive minimum" which cannot be defined. On the other hand, the Directors of the Bank of England would probably argue that it is rather hard to expect them to keep a large reserve lying idle, in order to enable their rivals in business to beat them in dividends; and that the natural solution of the difficulty is that the banks which deposit their reserves with the Bank of England should make it worth the while of the latter to keep the money on hand for them if they object to its being lent out. The public at large, however, has an interest in the matter, and it is obvious that at present the public interest is not protected as it should be. The Bank of England occupies, it is true, to some extent, an artificial position, and when the worst comes to the worst there is always an opening for the Government to come to the rescue. But an organization of credit which has to depend for its safety on the intervention of the Government cannot be said to be in a satisfactory condition.

OLD CATHOLICS AND ULTRAMONTANES IN GERMANY.

THE plot thickens in Germany, and Church affairs seem rapidly hastening to a crisis. On the one hand, Prince Bismarck and his opponents in the State Church are openly marshalling their forces in battle array; on the other hand, the Old Catholics are increasing their numbers and completing their organization by the appointment of a missionary Bishop. There is, of course, a close connexion between the two movements within and without the lines of the established hierarchy, but it will be convenient to take them separately in order to put our readers in possession of the leading incidents of the struggle during the last few weeks. First, however, we may say a word on the case of Baron Richthofen, Canon of Breslau, which appears to have created a considerable sensation in Germany, as well owing to his social and ecclesiastical standing as to the summary proceedings adopted by the Prince Bishop. It was already well known that anti-infallibilists were to be found among the members of many German Chapters, as *e.g.*, those of Trèves, Cologne, and Rottenburg, though in some instances they had maintained a discreet silence, while in others, as at Rottenburg, the Bishop shrank from enforcing dogmas to which he had himself reluctantly submitted. But when, last month, Canon Richthofen issued his formal protest "for truth and conscience sake," the infallibilists were much disconcerted at so unexpected a rebuff from such a quarter. The Canon, who is forty-one years old, was formerly parish priest at Hohenfriedeberg, but was last year named by the Emperor to a canonry at Breslau, and the Prince Bishop, though aware of his sentiments, confirmed the appointment. From the first he was looked on with suspicion by the Romanizing members of the Chapter, but when he refused to sign the address against the new Church laws, and induced his friend Dr. Künzer to withdraw his signature, their indignation could no longer be repressed, though his pious and blameless life and amiable character had endeared him to the clergy generally. In his public declaration he refers to the ill-disguised doubts and scepticism and dishonest reserves in the infallibilist camp, among those who have formally submitted to the Vatican decrees, and their intense bitterness against all who have had the courage to avow their convictions. Bishop Förster, of whom we shall have a word to say presently, did not let the grass grow under his feet; possibly he hoped by striking promptly to anticipate the action of the new laws. Be that as it may, he proceeded at once without any of the intermediate canonical processes of admonition, citation, and the like, to deprive and excommunicate the offending member of his cathedral Chaptor. Whether the Government will uphold him in his rights remains to be seen, but they can hardly escape the charge of manifest inconsistency if they fail to do so. And Prince Bismarck is not a man who would be willing to have it supposed that his bark is worse than his bite. It is clear at all events that, if he shows any sign of faltering, he will find the bishops more than a match for him.

We have before now given reasons for believing that there is not that entire unanimity in the German Episcopate which might appear on the surface, and that the public manifestoes issued periodically "from the tomb of St. Boniface" and elsewhere cannot safely be accepted as an adequate measure of the real sentiments of all who subscribe them. The memorial just addressed to the Government in the name of all the archbishops and bishops of Prussia requires therefore to be read with caution, and must await the interpretation of events. But, as far as words go, it is outspoken and uncompromising enough, and can only be viewed as an open declaration of war. The bishops announce with deep regret that "they are not in a position to co-operate in carrying out the laws promulgated on May 15," which violate the divine rights of the Church of God, and the recognized relations of Church and State from the days of Constantine to our own. They cannot acknowledge "the principle of the heathen State,"

which makes the civil authority supreme over the Church, without denying the divinity of Christ and the divine origin of Christianity, and they refuse to comply with those detailed provisions which are not in themselves objectionable, because they would by doing so recognize the competence of the State to regulate Church affairs by its own authority. Notwithstanding this very decided language, and the equally peremptory replies of the semi-official *Provincial Correspondenz*, it is still the prevalent impression in Germany that matters will not come to an open rupture at present, and that if the Government shows tact in the application of its own measures, the bishops will be found more compliant in act than they have ventured to show themselves on paper. There is probably an unavowed disposition on both sides to rest—if not very thankfully—till the results of the next Papal Conclave are made known.

The Old Catholics meanwhile have not been inactive. Their numbers at Cologne alone are reported to have reached four thousand, and a second priest is to be appointed there. But their great achievement was the election of a bishop, on June 4th, at Cologne, in the person of Dr. Reinkens, whose reluctance to accept the office has at length been overcome. He is a man of mature age, widely respected for his learning and piety, and has the somewhat rare merit of combining deep knowledge with fervent enthusiasm and great oratorical power. As Professor of Ecclesiastical History at Breslau he was naturally brought into close personal contact with the Prince Bishop Förster, who was at Rome a leading member of the Opposition. Their present relations may be judged of from a circumstance which comes to us on the best authority, and which strikingly illustrates the true position of parties in the Roman Catholic Church. On the Prince Bishop's return from Rome after the Council, Dr. Reinkens, who was on intimate terms with him, appealed to him to maintain the protest he had there made against the new doctrines, and was not a little startled at his reply. The Bishop said he was too old and feeble to carry on the contest, and therefore meant to make his formal submission; but he added that there was so much latent scepticism and indifference in the Church at the present day that a conscientious struggle against the Vatican innovations would not have a fair chance of success; Catholics, as a rule, cared too little what they professed to believe to be willing to put themselves out about the matter. And he therefore advised Reinkens to follow his example, acquiesce in the dominant teaching, and await better days. To which the Professor replied, that he could not conscientiously take that course, and felt the more bound to speak out as there was an impression current in Germany that Catholic priests were dishonest men who did not really believe what they professed, and he for one would do nothing to countenance it. This conversation, as was natural, brought all friendly intercourse between them to an end; and Reinkens has since, if we remember rightly, been suspended and excommunicated by his diocesan like his colleagues. He is the author of several works bearing on Church history, but is perhaps best known to the general public by his treatise on *Papal Infallibility*, published in 1870, and a little work, entitled *Die päpstliche Dekrete*, published the year after the Council, in 1871, and noticed at the time in our columns. It may be interesting at this moment to recall the position he there takes up, which is at once that of strict dogmatic Catholicism and of uncompromising rejection of what he regards as novel additions to the deposit of faith—*quod semper, quod ubique, quod ab omnibus*—handed down from the first ages of the Church. He starts from the following as fundamental Catholic axioms:—

1. The revelation of Christian doctrine is summed up and completed for ever in Christ.

2. This doctrinal deposit is preserved from generation to generation exclusively and alone through the faith of the Universal Church (*Gesammtkirche*), under the assistance of the Holy Ghost.

3. On this rests the Catholic principle of tradition, according to which what has not been believed at all times and by the whole Church does not appertain to that doctrinal deposit, and therefore can never become a formal dogma.

4. What is demonstrably contrary to what was held in *any* Christian century—as, *e.g.* the sixth—in the Universal Church, cannot at this day be made a dogma by any authority in heaven or earth without fundamentally destroying the Catholic Church.

5. The value of truth is absolute, and consciously to contradict it is the sin against the Holy Ghost.

Having laid down these axioms, "which no Catholic can dispute," Dr. Reinkens thus describes the aim of his first essay on the Vatican decrees:—

The sole object of the following pages is to exhibit clearly the true nature of the doctrine of the universal episcopate of the Pope contained in the Bull *Pastor Æternus*, by comparing it with the doctrine of the Universal Church at the end of the sixth century, as sharply defined by Gregory the Great, that Father of the Church and competent witness of her doctrine, for the express purpose of guarding it from all attacks.

In the preface to the second part of his work he refers to his earlier volume on *Papal Infallibility*, and proposes to contrast the ancient and modern (Vatican) teaching on the subject. In the subsequent parts he treats of the irregular and illegitimate character of the Vatican Synod, and the conduct of the German bishops in "submitting" to the dogmas they had at first strenuously opposed, and seeking to enforce them on others.

The election of Dr. Reinkens, after the Mass of the Holy Ghost had been celebrated in St. Pantaleon's Church at Cologne, on June 4, appears to have been almost or quite unanimous. According to the "provisional ordinances" of the Old Catholic Commission, he is bound immediately after consecration to seek the recognition of the Prussian Government, and take the prescribed oath. He will also apply for State recognition in other countries where he desires to exercise jurisdiction, and will, till it is obtained, confine himself to the "functions of order," *i.e.*, sacramental and liturgical acts. In the government of the Old Catholic communities he will be assisted by a Council of four clerics and five laymen, to be annually chosen by the Synod, at whose meetings he will preside and have a casting vote. The Council for the present year is already formed, and includes Schulte, Reusch, and Knoodt. The Synod will assemble regularly in Whitsun week and at other times when it may be necessary; the first meeting to be held at Whitsuntide, 1874. It will consist of all the Catholic clergy and one lay delegate for each congregation of not less than one hundred or over two hundred members. Smaller congregations will unite to send a delegate, and those of over three hundred members may elect two. Congregations will elect their own pastors, who will be confirmed and instituted by the bishop.

There may possibly be some short delay in the consecration of Dr. Reinkens, as the death of Archbishop Loos, the venerable and venerated primate of the Church of Holland, was announced on the very day of his election. Our readers will remember that the Archbishop, who had held the see of Utrecht for fifteen years, has all along shown a warm and intelligent interest in the Old Catholic movement; he was present at the Cologne Congress last September, and one of his latest acts was to ordain two young students from Germany to the priesthood. The suffragan see of Haarlem happens also to be vacant, and it is therefore thought probable that Dr. Reinkens will be at once consecrated by the Bishop of Deventer, without waiting for the election of a new archbishop. It is rumoured that the Prussian Government intends to provide a salary, but we have seen no official intimation to that effect.

THE SCIENCE OF ADVERTISING.

NO doubt every form of human effort tends to culminate. In this belief exhibitions are held and prizes offered. One often hears of the very best joke, and of the finest baby. There is no artist or author whose friends cannot show him his greatest work, marking the zenith of his powers, toward which all previous efforts are seen to have been a painful struggle, and from which all subsequent attempts have betrayed a falling away; though this point is not to be dwelt on, but only confessed and regretted. Every one is told in childhood, as an item of knowledge which should be found in every well-instructed mind, that Solomon was the wisest man who ever lived; and although some may afterwards call this in question, it still remains the prevalent opinion, insomuch that few can deny it without a feeling not unlike that of looking over a precipice. Solomon, in fact, is for most people the embodiment of that ideal philosopher who, Kant assures us, haunts the mind of every man. On the other hand, Mr. Carlyle bids us consider that there exists somewhere the very foolishest person; and if this person has never been identified, it is perhaps by reason of the perplexing multitude of candidates for the distinction. Our present purpose is to commend the following advertisement as, if not the best that ever has been or will be issued (since it is impossible to set limits to the fecundity and force of nature), a fine specimen of its kind, and an instructive example to epic poets and other wordy persons how great merit may be attained in small compass. It runs thus:—

Some Extraordinary Tea

is now being sold by ———

——— & Co. have great pleasure in offering to the public some really choice Kyshow Congou of extraordinary quality—in fact, some of the finest tea ever imported into England.

——— & Co. in all their experience have seldom met with tea of such rare excellence.

Here it may be seen that tea, like other things, tends to culminate, and that there may be better and worse even in Kyshow Congou itself. But this by the way. Never that we are aware did any advertisement induce us to buy what we did not want; but this one came very near it. For some time it dwelt in our minds, working unobtrusively. Already in imagination we went to see what that tea was like. Its sweet idea wandered through our thoughts. In all our experience (to imitate what we admire) we have seldom met with an advertisement of such rare excellence, such effective rhetoric. So, remembering what authors tell us so frequently, that it is the part of a critic to praise as well as blame, we felt that it became a duty to extol this masterpiece. And, remembering again what we are sometimes told, that a critic should not be a mere empirical taster (like one who gives the palm to Kyshow Congou), but should be able to assign a reason for his judgment, we proceed to offer ours.

In attempting this, we are sensible of the disadvantage of being unable to refer to any authority on the subject. For, when Blair wrote, advertisements had not become such a considerable branch of literature as to entitle the art of composing them to particular notice in his ingenious Lectures; and none of his successors has yet made up the deficiency. Trusting to the light of nature, however, and checking *à priori* speculation by consulting the works of the great masters in this department (since here as elsewhere practice precedes reflection), it seems safe to say that the first requisite of an advertisement is that it should be striking—noticeable as a whole, and its important clauses especially salient. To the superficial thinker our masterpiece apparently fails to fulfil this first condition of excellence in

its kind. But meditation discovers a deeper conformity. We might have expected our attention to be challenged by a Chinese picture of a Mandarin standing near a river and handing a cup of Kyshow Congou to a damsel sitting in the fourth story of a pagoda on the opposite bank. Instead of this we have a simple decorous tablet bearing black letters on a white ground, not unsuitable for a tombstone. The reconciliation of the seeming discrepancy is that when the principle of salience has long been adhered to and followed in one direction, pictures and glaring colours become commonplace and tiresome, and modesty is conspicuous as a surprise and relief.

Moreover the principle of salience is controlled by other principles, particularly by that of relativity, which has two aspects. The complexion of advertisements must vary relatively to the persons addressed and to the thing advertised. It is not enough to strike, since some strokes are far from propitiatory. How often has a slap on the back destroyed the life of the friendship which it was meant to revive! An advertisement must not strike, as you strike a ball, to drive it away, but rather as you strike a trout, to draw it to you. To address free-born Britons in the peremptory tone—Buy your boots here or there—betrays gross ignorance of national character. It is very questionable whether any man could make a good boot who had so little discernment of the fitness of things. Again, impertinent interrogatories in vain appeal to a class whose interest is above trifles. In them the demand "Who is Williams?" only excites the response "Know thyself!" Evidently notes of exclamation repel the polite; whilst subtleties of finesse are thrown away upon the vulgar. Further, as has been said, the style appropriate to any advertisement depends on what is advertised. The following struck us the other day as gratuitously revolting—"A thousand heads wanted for a thousand hats!" It out-Herods Herodias; though there is nothing necessarily bloodthirsty about the business of a hatter. Or who would not shudder to see the advertisement of a library on sale printed in orange letters on a green ground, or headed with the picture of some painful person reading Herbert or Sidney as if to a mob at a fair? Rather should such signals of distress be bordered deep with mourning, as if the auctioneer himself consented to the separation with averted face; or they might present one black expanse of printer's ink with letters where his tears (the auctioneer's) had washed a dubious white.

On trying our masterpiece by these principles its extraordinary quality becomes indisputable. For tea, as De Quincey says, is the favourite beverage of the intellectual. Choice teas, too, and teas of rare excellence will only be bought by those to whom they afford a high gratification, or who are ready to pay a great price for a small one. We might say of any exceptional luxury that it was Kyshow Congou to the general. Moreover, regarded as a luxury, tea is rather an æsthetic than a sensual delight. Its preparation is the fine-art department of cookery. The celestial leaf is much out of place among the commodities of a grocery establishment. The druggist seems a more suitable vendor; an ancient bookseller or picture-dealer is still more to be preferred; but the herb (so its lovers name it, as smokers call tobacco the weed) is only worthily honoured at a store sacred to itself. Perfectly consonant with all this is the style of our masterpiece. Observe its plain candour and measured conscientiousness, as of men offering to trade in nectar with the gods—

> In regions mild of calm and serene air,
> Above the smoke and stir of this dim spot
> Which men call earth—

far beyond the reach of competition and the higgling of the market. No price is mentioned. It is not prompted by that propensity to truck and barter which the great forefather of English economists (*Adam* Smith, as they always piously call him) found to be inherent in human nature; but is conceived in a mingled spirit of scientific judgment and æsthetic ardour. Let us scrutinize it more closely; let us subject it to the analysis of a loving criticism, which it is well able to bear.

Of the chastity of its form and effects in the way of colour and printing enough has been said. We pass to matters more strictly literary, to what some would call the "choice of words"; though we object to that phrase as savouring of the age of mechanism, and ill expressing the spontaneous growth of such a flower of language. Consider the word "extraordinary"; pronounce it with unction, and mark the deliberate length and judicial calm of that second syllable. It lingers in the mind, and compels circumspection. If, whilst dwelling on it for half a minute, it should seem after all not to be the right vocable, there is still time to withdraw it and substitute a better. Note next that ——— & Co. have "great pleasure" in offering us their Kyshow Congou. They do not say they are "glad"—a business-like and unfeeling expression; nor that they are "honoured," for they stand in the position of benefactors, and it is not a time for servility. Fresh from tasting the foreign wonder, they have great pleasure alike in the remembrance of its unearthly fragrance, and in their confident anticipation of the customer's sympathy. Thus Eve approached our forefather with the fruit of that forbidden tree. Then the Miltonic placing of Kyshow Congou here! One seems to be caught away in a whirlwind from the smoke and stir of this dim spot, and set down amidst the ancient and leisurely industries of a Chinese tea plantation. What a resonance too in those words, not without onomatopœic merits, as if it were the banging of some prodigious kettle! And what mystery! they might be the burden of a witch's incantation droned to the accompaniment of her simmering cauldron. We think the firm must keep a tame poet. If so, the genius of that domesticated animal culminates in the last paragraph, beginning "——— & Co. in all their experience." Here we have a pensive strain. It seems never to have been meant to meet the public eye, but reads like a memorandum in a private diary, which a hypochondriac has entered with a sigh. "In all their experience"—think of the thousands and thousands of cups of tea which constitute the Firm's experience, and what a labour (of love perhaps) it must have been to confront a sample of this cargo with all its predecessors, before they could know that they had seldom met with tea of such rare excellence. We figure to ourselves the Firm assembled in a dim back parlour for the great consultation; brothers, and three in number—though on this point we have no knowledge, but it seems right, since three witches prepare the cauldron in *Macbeth*. The brew perfected, they sip together. The flavour takes its way into the recesses of their imagination, where the pale ghosts of departed samples rise up to welcome it; flavour on flavour piled about their heads like cloud on cloud. Then the work of comparison; the painstaking indifferently to administer justice, to give their due alike to new and old; not to let their judgment be overpowered by the greater vividness of the present impression, nor yet to allow too much for the effacements of time; not to be led astray by love of novelty, nor yet by superstitious reverence for antiquity. It is on account of this last consideration that the first brother says, with a faint notion that he is quoting Bacon, "This flavour is the true ancient," and is then glad to see that the others are too deeply absorbed to notice whether the allusion is apposite.

And now observe the public spirit of the advertisers. Having at last assured themselves of the rare excellence of this tea, there were three courses open to them. First, they might have kept it all to themselves, to serve as a sort of imperial standard to which the qualities of other teas might be referred, thus saving themselves for the future such labours of comparison by establishing and maintaining in their minds a pure and lofty idea of what a cup of tea should be like. Secondly, they might have given it away in Christmas presents to their old customers. And if it had been in the least less extraordinary than it is, it is just possible that their lower natures would have urged them to one of these courses. But Kyshow Congou, being such as it was, triumphed over every base impulse; and the Firm, in its enthusiasm, resolved on offering it to the public at large, merely putting a price on it to prevent its getting into the teapots of the unappreciative.

Still, with all its excellences, the advertisement contains one or two flaws. To say that this tea is "in fact some of the finest ever imported into England" is perhaps going beyond the evidence. For the experience of the Firm cannot reach so far back, unless by hereditary transmission. Again, why is this Kyshow Congou said to be "really choice"? If choice at all, it must, we conceive, be really so. "Really" seems here to be a mere expletive; a weak attempt to gain emphasis by redundancy of words. This is a rhetorical artifice unworthy of genius, and we hope to see the blemish removed in future editions.

MR. LOWE AND THE ZANZIBAR MAIL CONTRACT.

TWO important general principles are involved in the question which has been raised as to the contract for the conveyance of the mails between the Cape of Good Hope and Zanzibar. This contract was the result of a private agreement, and it is maintained that it ought to have been thrown open to public competition. Mr. Lowe not only disputes this position, but contends that matters of this kind ought to be left entirely to the Government, and that the House of Commons ought not to meddle with them at all. To transfer the responsibility of entering into such contracts from the Government to the House of Commons would, he argued, lead to personal solicitations, "lobbying," and other proceedings which he should be sorry to see introduced into this country. Most people will be disposed to agree with Mr. Lowe that it would be a great pity to have such practices introduced into the House of Commons; but, on the other hand, it can hardly be said that the Government should have absolute authority to enter into whatever contracts it chooses without check or supervision on the part of the House of Commons. Formerly the rule was that packet contracts made by the Government were binding unless disapproved by the House of Commons; but the present rule is that contracts are not binding until they have received Parliamentary endorsement. For this change the present Government, we believe, is responsible; and if Mr. Lowe does not like the system, he has his colleagues, and we suppose himself also, to blame for it. It is quite certain that no contract ever was or will be entered into to the satisfaction of everybody. Disappointed competitors are sure to find fault with the terms of a bargain in which their rivals have got the better of them, and there can never be much difficulty in discovering plausible reasons why the contract should in some respect or other have been different from what it is. In the present instance the object of the Government was to put down the slave trade on the East coast of Africa by means of a postal contract. This may seem rather a roundabout process, but there is something to be said for it. The Government had attempted to suppress this abominable traffic by armed force, and had not made much progress. It had spent a quarter of a million in this way in five years, and it was anxious to see whether some

more economical treatment could not be devised. After considering the matter, it came to the conclusion that it might be well to try the effect of pacific measures. It was thought that the cultivation of regular commerce would drive out the slave trade, and that the best way of cultivating commerce would be by establishing a line of steamers between Aden, Zanzibar, and the Cape. As an encouragement to the steamers a postal subsidy was proposed. Negotiations resulted in agreements with the Indian Steam Company to carry the Aden and Zanzibar mails for 10,000*l.*, and with the Union Steam Company to convey the mails between Zanzibar and the Cape for 15,000*l.* a year. It was further arranged with the latter Company that, if they reduced the length of the journey between England and the Cape from thirty-seven to thirty days, they should have an extension of their contract, which had four and a half years to run, for three and a half years more, at the rate of 26,000*l.* a year, instead of 29,000*l.* which they were then receiving. Subsequently it was decided to drop the latter part of the bargain—that as to the conveyance of mails between England and the Cape—and the Government then agreed to reopen the question as to the terms of the remaining service. It was held that the two contracts which had been entered into with the Union Steam Company were really parts of the same bargain, and must stand and fall together, since it was only on account of the advantages to be derived from the second contract that the Company had agreed to perform the first so cheaply. The end of fresh negotiations was that the Government consented to pay 26,000*l.* for the conveyance of the mails between the Cape and Zanzibar, which the Company had before agreed to do for 15,000*l.*

The particular question before the House of Commons on Monday night was whether there was any reason why the Government should pay the Union Steam Company 26,000*l.* for a service which the Company had been willing and eager to perform for 15,000*l.* a few months earlier. On what grounds was this bonus of 11,000*l.* given to the Company? The only explanation which Mr. Lowe offered was that in the first instance the contract for the mails between Zanzibar and the Cape, and the contract for the mails between the Cape and England, balanced each other, and that the Company could afford to accept very low terms for the former, in consequence of the advantages they would derive from the other part of the transaction. This, however, would seem to be only shifting the difficulty. Why should the terms for the conveyance of the mails from the Cape to England have been so high, and the terms for the Zanzibar and Cape mails so low? Since there were two contracts, it would surely have been reasonable to apportion the expenses of each service in accordance with its actual cost. If we take the Zanzibar and Cape contract by itself, 11,000*l.* is certainly a very considerable advance on a contract at the rate of 15,000*l.* But, says Mr. Lowe, this 11,000*l.* is compensation to the Company for the withdrawal of the other contract. And here we come upon another aspect of the matter. This second contract was for the conveyance of the English mails at a reduction of 3,000*l.* a year, with an accelerated speed. At first sight this might seem a very good bargain for the country, but if it was a good bargain, why has it been abandoned? And if it was really a bad bargain, so bad a bargain that it has been thought worth while to give the Company 11,000*l.* a year under another head to get out of it, what are we to think of the terms of the existing contract at the rate of 29,000*l.* a year? It must strike any one that this is not a business-like and straightforward way of making contracts. The two mail services were separate things, and they should have been each estimated at their natural value. It is, on the face of the transaction, childish to stick on 11,000*l.* to one contract in order to make another contract 11,000*l.* less. An addition of three-fourths to the terms of the first contract is a serious advance for which no adequate reason has been given, and on the whole we are led to the conclusion that the matter was carelessly or unskilfully managed by the Government. The most extraordinary part of the affair is that the Treasury should have been ignorant that the British India Steam Navigation Company had offered to perform the Zanzibar and Cape service for 16,315*l.* The offer was made to the Post Office, and it was known to the Colonial Office, for it is mentioned in one of Lord Kimberley's despatches; yet the Chancellor of the Exchequer never heard a whisper of it till Monday night, when it came upon him quite by surprise. It appears that the offer of the British India Steam Company in 1871 was not a formal tender for an independent service, but only a proposal to include the Zanzibar mails as part of the general Indian contract. Yet it is strange that the Chancellor of the Exchequer should never have heard of it.

As far as this particular transaction is concerned, we are disposed to think that the Government has been in fault, and that the contract is rather an extravagant one. It certainly looks very much as if the Chancellor of the Exchequer had discovered that the extension of the contract for the English mails was a mistake, and had found it necessary to offer a high figure for the Zanzibar and Cape contract in order to get out of the scrape. If Mr. Lowe had frankly confessed this—assuming it to be the fact—or if he had defended the contract on its own merits, he would no doubt have escaped from the humiliating position in which he was placed on Monday night. No Government is infallible, and mistakes will sometimes happen in regard to contracts as in regard to other things. When a mistake happens, if it is not a very serious one, there is no need to say too much about it. There can be no doubt, however, that Mr. Lowe fell into a characteristic error in beginning his explanation by scolding the members who asked for it, and accusing them of "lobbying." As a general rule, it is certainly not desirable that the House of Commons should meddle with such matters. It is much better that they should be dealt with by the Government on its own responsibility, and that members should hold aloof from interference with transactions of the merits of which they are extremely ill qualified to judge. It is not a pretty sight to see the House of Commons split up into factions over a trumpery contract, and wrangling and squabbling as to whether the job shall go to the client of one set of members or to the client of another. Mr. Lowe was wrong in using the word "lobbying," which carries with it the imputation of corruption; but it requires very little reflection to see that it is not good for members to be exposed to the sort of solicitation and pressure which would be brought to bear on them if it were to become a regular practice for the House of Commons to take upon itself the duty of distributing Government patronage. No doubt the Government will occasionally make mistakes, but the harm done by an occasional mistake of this kind is insignificant compared with the mischief which would arise from members mixing themselves up with candidates for contracts, and serving them as spokesmen and touters. The Government is a great buyer and seller; there is scarcely any trade with which it has not commercial relations in one way or another; and the only difference between a mail contract and an order for coals or iron is that the former probably involves a larger sum of money. But the House of Commons has just as much right to look into one as into the other, and it is easy to conceive what would happen if the House once gave way to an impulse of meddlesomeness in this direction. It is no doubt necessary that the House should reserve to itself the right of ultimate supervision over the making of contracts and other mercantile dealings of the Government, but it is obvious that this is a right which should be exercised with the greatest delicacy and caution, and as seldom as possible. A numerous and mixed assembly is quite unfit to sit in judgment on nice questions of commercial expediency, and its intervention should be reserved for very grave occasions. As to the question whether contracts should be made by open competition or private agreement, no absolute rule can be laid down. Sometimes one way will be better, and sometimes the other, and the choice may fairly be left to the discretion of the Executive. It is obvious, however, that private bargaining ought not to preclude inquiries as to the terms on which more than one firm or Company would be willing to undertake a contract.

THE DESTRUCTION OF ALEXANDRA PALACE.

THE destruction by fire of the Alexandra Palace is in every point of view lamentable. Without expressing any very warm sympathy with the undertaking, we may at least say that it was likely to do good and could not easily do harm. The opening on the 24th of May was the result of a heavy expenditure of money and a long and honourable perseverance under severe difficulties and discouragements. The site of the Palace was probably the best that could have been selected. The view from Muswell Hill is superb, and the park and fields around it are adorned with timber of rare beauty. Access to the Palace from the north of London was ready, and from other parts of London convenient, although rather slow. You could cross by railway from the Crystal Palace on the south to the rival institution on the north if you took time enough for your journey. From the high-level station of the Crystal Palace you would pass to Ludgate Hill, thence by Farringdon Street to the Great Northern Station at King's Cross, and thence to the station adjoining Alexandra Palace. In speaking on the 31st ult. of railway access to Alexandra Palace, we noticed that trains from Ludgate Hill and Farringdon Street to King's Cross "cross the line" of the Metropolitan Railway close to the King's Cross Station. This expression may have conveyed an erroneous idea. All these trains pass under the Metropolitan line, so that they cannot interfere with the traffic upon this line. This arrangement is indeed tolerably well understood, but still any possible misapprehension as to safety of transit might have tended to deter visitors from the Alexandra Palace. Unhappily, there is now no Palace to be visited; and the charms of grass and trees in the Park are deformed by the blackened ruins which it surrounds. We have one big building the less to exhibit to the Shah of Persia, but we can tell him, if we please, that the Palace which has been destroyed cost half a million sterling, and there is already talk of spending another half-million to rebuild it. The Metropolitan and suburban railways are not perhaps wonders of scientific engineering, for it has for some time appeared possible to make any railway for which money can be found; but they exemplify in a very distinct and striking manner the wealth and energy of London, and its need, or at least its determination, to have rapid and regular communication. At Farringdon Street a Great Northern train is on the left or near side of the Metropolitan line and on a level with it; at King's Cross the same train is on the right side of the same line and on a level with it. Thus the train has descended into the bowels of the earth and risen again from them. This sort of thing can hardly be seen except in London. It does not exist elsewhere, because the necessity for it does not exist. In countries where nobody is ever in a hurry level crossings are almost invariable. In England, or at least in London in the month of June, nobody

is ever at leisure. The demands of business are urgent, and those of pleasure are more urgent still. We block our streets with carts and carriages, and construct railways one under another to relieve our streets. A stranger who desired to estimate the resources of this country would do well to make a journey from Upper Norwood to Muswell Hill: He might not perhaps see much beauty, but he would be assisted to understand how an English Company became rulers of India.

Sudden and complete destruction has resulted from neglect of obvious precautions. A slight and readily inflammable structure was placed upon a hill where water supply would be difficult even if the best possible arrangements were made for it. The Palace was completed and opened in a hurry, and calamity occurred before measures had been taken to avert or mitigate it. When we lately remarked on the inconvenience of exhibiting pictures and other works of art on a hill six miles from London, it did not occur to us to consider the risk they incurred of an almost irreparable loss. The Fire Brigade sent a strong detachment as speedily as possible to the Palace, but, having an uphill journey of several miles, they did not reach their destination until ruin was almost complete. They found an indifferent supply of water. If there had been a good supply of water and steam fire-engines at hand from the first, the fire might have been kept within narrow limits. But in the absence of such provisions it was uncontrollable. A piece of charcoal let fall from a plumber's brazier "found its way between the papier-mâché and light timber lining of the roof." A building thus constructed must be in peril of destruction from every act of carelessness. Papier-mâché and light timber lining are perhaps inevitable in what is called a Palace; and, if so, the risk of exhibiting valuable pictures in a Palace must, under the most careful management, be considerable. The central dome burned vigorously. The flames spread all ways along the roof, and burning fragments began to fall upon the floor. The draperies of the Royal box, the fittings of the orchestra, the baskets of artificial flowers, are all mentioned as feeding and forwarding the flames. There was not much to burn, but everything was easily accessible. The spectacle of this conflagration, which was very grand while it lasted, finished in about two hours. Looking at the character of the building, it is not wonderful that the owners were unable to insure it and its contents to anything near their value. A fire may occur anywhere, but there are only few situations where a fire involves almost inevitably the destruction of property worth half a million. A report in the *Times* states that Captain Shaw expressed to the writer his astonishment "that any large building should ever have been erected on the summit of a hill without an adequate supply of water having been ensured in the beginning." It was the first condition of safety to provide adequate pumping power from the New River which is at the foot of Muswell Hill to the Palace on the top of it. If the light structure would not carry water-tanks in the roof, it ought to have been strengthened.

While the ruins of the Alexandra Palace were still smoking, the authorities of the Crystal Palace held a grand commemoration fête on the nineteenth anniversary of its opening by the Queen. Not having been present, we cannot tell how we might have been impressed; but looking merely at reports, we should say that the unveiling of a statue of Sir Joseph Paxton, even if it be called an inauguration, could not have been a very imposing or exhilarating ceremony. The oration of Mr. Scott Russell seems to have shared the fate of other vocal performances at Palaces—that hardly anybody could hear it except by taking a place long beforehand, which perhaps was scarcely worth while. The speaker is reported to have described his departed friend as having devoted his highest energies to securing the well-being and the moral and mental improvement of the people. This is, we suppose, a fine way of saying that he invented the Exhibition Building of 1851, and thereby ensured the success of the Exhibition of which "Her Majesty's Commissioners" are a relic that encumbers and afflicts the earth. At some distant time, when Cole C.B. shall have ceased his civilizing labours there will be statues of that eminent teacher and benefactor of his age to be unveiled and inaugurated, and the only question will be, where to find an orator competent to pronounce his eulogy. The day at the Crystal Palace was brought to a close by a "splendid display of fireworks," which must have been a tame affair compared with the fireworks of the day before, in which the Directors of the Alexandra Palace expended half a million of money. It is but a small matter to be unveiling a memorial of Sir Joseph Paxton at the Crystal Palace, when the managers of the International Exhibition have promised to produce the real live Shah of Persia at a fête. If we remember rightly, the Sultan of Turkey went to the Crystal Palace, but that was before a younger institution had appropriated official and Court patronage to itself. It is almost pathetic to read of the performance at the Crystal Palace of a "Commemorative Ode in memory of the Prince Consort." The Directors maintain an unequal contest. They are forced to rely upon the fact that the Queen opened the Crystal Palace nineteen years ago, whereas the Prince of Wales is at this moment a manager of the International Exhibition. The memory of the Prince Consort has become a valuable property of analogous nature to a trade-mark or trade-name; and we should not be surprised to hear that the Court of Chancery was engaged in determining a conflict between the genuine original old-established commemorators of the Prince Consort at Sydenham and the new and improved but piratical commemorators at South Kensington. It seems to be settled that the Shah of Persia is to be taken to the Western shop. We can only hope that he will not depart under the belief that the Prince of Wales and the Duke of Edinburgh are shopkeepers.

The International Exhibitioners having built for themselves a permanent habitation, we are not liable to have any more Palaces wandering about the country and locating themselves on the tops of hills where there is a free current of air and a limited supply of water. It is a pity that the building of 1862 could not have been pulled to pieces and forgotten, as in that case the idea of this luckless Palace on Muswell Hill would never have been started. However, the Directors have declared their determination to rebuild, and Messrs. Bertram and Roberts announce that they have saved their wine and much of their other stock and plant, and that the business of supplying dinners will be carried on in the Park. Brave men contending with adverse fate furnish a sublime spectacle, and Britons may well be proud of Messrs. Kelk and Lucas standing amid the ruins of the building in which they were so largely interested, and declaring that the only thing to be done is to rebuild it. The architect whom they employ will doubtless be particularly careful to shut the stable-door now that the steed is stolen. They will adopt, or think that they have adopted, the most elaborate precautions against fire, and perhaps they may induce owners of pictures to allow them to be exhibited in their new building, and perhaps they may not. When we hear that a building has been made "fire-proof," we infer that certain dangers have been incurred in the hope of avoiding others. The tie-rods of the dome of the Alexandra Palace gave way, as such things always do, and the dome fell with a tremendous crash. These tie-rods were, we presume, of iron, which always gives way under such circumstances. Wood covered with plaster is safer than iron, but wood is generally unsuitable for the airy structure of a Palace. It has been often said of loan exhibitions that the pictures are at least as safe in a public gallery as in the owners' houses. But after the narrow escape of this week that assertion will not perhaps be so readily accepted as it used to be.

ORIENTALS AT VIENNA.

THE anticipations with regard to the appearance made by Orientals at Vienna will be realized to the full, and doubtless the contact between East and West will prove of mutual advantage. In fact, the peculiarly happy situation of the Austrian capital has not only given this Exhibition its distinctive character, but has developed its proportions in a degree that has falsified all the original calculations. It soon became evident that circumstances would take it out of the category of those which had preceded it; that it might open new markets which were practically limitless, and that it would throw new and valuable lights upon hackneyed and familiar subjects. It was seen that it would reproduce, on an immeasurably greater scale, such cosmopolitan gatherings of traders as assemble at the great fairs of Leipsic or Nizni Novgorod; that it would drag into open day the rarer contents of Oriental bazaars, and expose them side by side with the goods produced in Western manufactories and sold by Western shopkeepers. There would be unrivalled opportunities of making comparisons and drawing conclusions, of learning practical lessons and exploding antiquated prejudices. So it seems likely to prove; nor will either half of the world have much reason to triumph over the other. We need not advertise the wonders of our Western civilization. If we are not much in the way of boasting of them as against the benighted East, it is simply because we enjoy the serene self-complacency of indisputable superiority. To a certain extent we are justified by the results of a rapidly accelerating progress, which shows itself in the swift growth of our material prosperity. We work at the highest pressure; we invoke science to our assistance, and foster a restless rivalry that drives invention forward at express speed; we multiply labour by the introduction of mechanical improvements; and we supply our homes with luxuries that have become necessaries at extraordinarily economical rates. In short, we produce quickly and cheaply, and in all that relates to action we leave the dreamy East immeasurably behind, as the Easterns are ready enough to acknowledge, and, for the most part, rather with commiseration than envy. But, on the other hand, in much that is highest and most perfect in art we are the scholars and they the teachers. Our best-informed and most experienced technical and practical men are the most ready to acknowledge this. It is not wealthy connoisseurs and capricious *dilettanti* who lounge about the courts of Japan, China, and Turkey, cheapening the strangely attractive wares which are exposed by the merchants from those distant countries. It is the European manufacturers and tradesmen—especially the English—who rush into the Eastern departments, eagerly bidding against each other for everything that strikes their fancy. This is one of the most characteristic features of the Vienna Exhibition. On no previous occasion of the kind has there been such wholesale buying and selling in the very earliest days, and the traffic goes forward most briskly in the Oriental quarters. As yet Japan has not cleared her goods at the Custom-house; China has scarcely imported the better part of hers. Those countries cannot as yet pretend to set a price upon their wares, while the prices fixed by the Persians seem high enough in all conscience, and the Ottomans are following suit after the time-honoured fashion of Eastern dealers. Yet already the choicest of the

Persian prayer-carpets are snatched up at the high prices set upon them; the best of the Japanese porcelain, bronzes, *cloisonné* ware, and silks have been sold several times over, the charges being left to the conscience of the Commissioners, and the cards of the fortunate purchaser lying on the fragments of the torn tickets that had been affixed by rejected bidders; while even in Turkey and Tunis, which come far behind Japan and Persia in taste and quality of workmanship, many of the goods have changed owners already, the Prince of Wales being among the earliest and most considerable buyers.

The truth is, the more closely we look into the special productions of the East, the more we recognize its incontestable superiority in design and colour, and in perfection of form and finish. The Orientals have plenty of time no doubt, and do not grudge it; they can afford to work leisurely and carefully where we must economize labour by the rapidity of our processes and the multiplying power of our machinery. But then they have taste as well, and a taste which is older than schools of art, and seems nearly independent of technical education. Compare the graceful turbans and draperies of the Oriental with the stiff "chimney-pot," cutaway, and trousers of the Frank. The latter, although open to criticism even as convenient wear, doubtless look more like business. They give the idea of stripping easily for a hard day's work, and suggest readiness to answer the calls of any emergency. They are turned out comparatively cheaply to cut-and-dry patterns. The former are the signs of a languid yet not unfruitful existence. But they express the intuitive gracefulness of ideas evolved in a calm fulness of thought that will not be hurried; they show an originality and versatility of fancy whose inspirations may have been sought in the dreamy fumes of opium. Go to the remotest East of Asia, seek the Oriental on his own proper ground, and you seldom take him at a disadvantage. In his own unpretending way, the peasant who weaves mats of bamboo or moulds vessels of common clay in his retired village is as much of an artist as the skilled workman of Yeddo who lacquers cabinets in the most delicate plaques of veneer, or chases the bronze incense-burners that are to swing in the temples. When the Oriental breaks down is when he takes to imitating the European, as he has begun to do in these latter days. The Japanese sometimes turn from their own beautiful specimens of Kago and Satsuma porcelain to reproduce the fashions and colours of Parisian and English crockery, while the Turks back their clumsy machinery against the looms of Manchester in calicoes and cottons. Happily these follies of imitation are as yet rare; and probably the profits of this novel trade will not encourage the enterprising imitators to persevere. The East has much to learn from the West, and the lessons that will prove of most service to it go to the very groundwork of its society. It has yet to be enlightened as to the advantages of civil and religious liberty and education, the value of time, and the necessity of system and method. All this it is now learning, and in some matters of detail its education is going on only too rapidly. Doubtless sooner or later it will come to our markets for machinery which will enable it to make at home what it imports at present from abroad. But some of its tentative advances in this direction are premature and injudicious, to say the least, and, judging by certain samples of its imitative skill, it seems inclined to precipitate a competition whose unfortunate results in price and quality may cause it permanent discouragement.

However, it is not our purpose now to discuss the points on which we may teach the Orientals, but rather to glance at some of those where we are the scholars. There is a great deal in the Eastern departments of the Vienna Exhibition which is chiefly interesting as showing their relative backwardness. Some of them, for instance, send complete samples of their cereals and vegetable productions, and these are curious as illustrating the advantages of soil and climate which yield them, in spite of the most backward husbandry and the most primitive implements, returns of twenty, fifty, or a hundred fold. But only turn to their show in the arts, and some of them may almost set criticism at defiance. By general consent and beyond all comparison, the first place must be assigned to Japan. The Japanese does most things unlike the rest of the world. His method of handling his tools is precisely the opposite of ours. He draws his plane towards him, works his saw in the reverse direction, taps with the side of his queer hammer, and handles his quaintly chased graving tool in a way at which an English workman would stare. Yet, whether he is laying the shingles on the roof of a cottage or chasing one of those wonderfully elaborate caskets in metal-work, what English workman can approach him? His ideas discover an endless originality; individual impulse rather than education seems to inspire his fancy, although it may work according to received traditions of the quaint or beautiful; and, look where we will through a most miscellaneous collection, we can scarcely see a trace of servile repetition. In his pictorial art he can convey a world of expression and suggestion in the very smallest number of touches. Yet when it pleases him to finish, as when he is painting on his delicate porcelain, he is scarcely to be surpassed in harmonious minuteness. As for his colours, you may puzzle out his secret if you can; at least he shows you in an open case the chemicals which, as he professes, form his ingredients. All that can be said is that none of the numerous attempts at imitation have ever proved to be anything approaching a success. That strange superiority in colour, not only in the tints, but in their management, is to be remarked in every one of the Oriental Courts. The silks of China excel even those of Japan, in their bright blues and gorgeous crimsons; while for softened brilliancy and exquisite delicacy of blending the Persian carpets are confessedly unequalled. The invariably subdued beauty of these patterns argues something more than great mechanical perfection in the arts of colour-making and dyeing. It is proof of a general purity of taste on the part of the Oriental purchasers for whom the fabrics were originally intended; for, although many of the best may now be consigned to Europe, the manufacture precisely as we see it has been practised from time immemorial; there are carpets in the Exhibition called modern by comparison, although they may date back for a century or so, and these are of patterns exactly similar to the latest ones. In everything exhibited from China and Persia the work is almost invariably good, and the designs felicitous; although, except in certain specialities, they cannot vie with Japan, yet every now and then one stumbles upon something that is extremely beautiful in art. So much can hardly be said of Turkey. Turkey makes a very imposing display: the Sultan contributed 100,000*l.* towards forming the collection, and some of the great merchants in Constantinople, Smyrna, and elsewhere have apparently done their best to advertise themselves. There is a good deal shown in Turkey, as well as in Tunis, that would have attracted great admiration had there been no Japan and no China to provoke unfavourable comparison. The famous Turkey carpets can scarcely be said to be satisfactorily represented. The very best, beautiful as the texture is, fall far short even in that respect of the Persian; while the contrasts displayed in the body of the Turkish patterns are too often disagreeably violent. But for the most part the carpets exhibited are of a very ordinary class indeed. The inlaid marqueterie and cabinet-work seems rude in design and coarse in execution if we measure it against the Japanese standards. The carved olive-wood from Jerusalem recalls the pedlars' hawking goods made for sale at the doors of the Holy Sepulchre. Here and there are some exquisite arms among many that are inferior; but even the very best of them are excelled by the Persians. There are graceful shapes in the pottery, but they are not unfrequently marred by defects in the workmanship. There is a great collection of figures in the various national costumes, and the dresses strike one as being somewhat incongruous. On the whole, the only articles in which Turkey may be said to show to decided advantage are some extremely rich furniture stuffs, the choicest of which seem to have been already sold or removed, and the dyed morocco, which, in its vividness of colour, shames anything that can be shown by the West. It must be remembered, however, that the Turk gives almost as many months to the dyeing process as the European allows days. Taste apart, we may perhaps console ourselves for the inferiority which we must confess by repeating that facts like this deliberate process of dyeing furnish the key to much of the Oriental excellence. Time is of no value in the East, and patience and indefatigable perseverance have always been the willing handmaids of their arts and manufactures.

DIANE DE LYS.

THIS play, of which so much has been said, has been seen in London only enough to excite, rather than satisfy, curiosity. The first remark that we have to make upon it is to express our earnest hope that no manager will attempt or be permitted to produce an English version of that which is incapable of translation. Those who have seen *Frou Frou* on the English stage have seen enough of adaptation, or rather violation, of French plays. It is the duty of the Lord Chamberlain to draw the line somewhere, and he drew it, and for some time maintained it, between *Frou Frou* and *Diane de Lys*. It is not our business to examine into the nature or extent of the differences which exist in life and conversation between the two ladies who have been so admirably represented by Madlle. Desclée. The former part has been played by other French actresses in London, but the latter, although it has existed for twenty years, has only been performed within the last month. Both these plays may serve equally to show how wide is the gulf which separates English from French dramatic art. You may take scenes from either play and translate them literally into English, and thus produce grotesque effects where the authors intended to be serious and even solemn.

We will begin at the fifth act of *Diane de Lys*, which has a tragic ending, although many of the scenes are light and playful. The act opens in the studio of Paul, to whom enters Taupin with a carpet-bag, and afterwards Maximilian. Taupin recounts an adventure which has just happened to himself. "You know," he says to Paul, "Madame Taupin, and you know how often I have prayed to be delivered from her." "That," says Paul, "is true." Maximilian here interferes to inquire who is Madame Taupin, and is informed that she is the speaker's wife. He thanks Taupin, and adds, "C'était simplement pour m'intéresser aux personnages." Taupin replies that she is his wife, "une petite personne bien désagréable." His friend Paul confirms this statement. "Ceci posé," continues Taupin, "je reprends le cours de ma narration." Madame Taupin had lately become less unpleasant than usual, and her husband began to think that there must be some cause for her amiability. Two days ago he made this reflection as he mounted the stairs to his abode, when he heard a door open, and "deux bottes, deux bottes triomphantes, deux bottes d'aplomb, deux bottes de maître de

maison, résonnèrent sur le carré, puis un baiser glissa dans l'air." The voice of Madame Taupin is heard making an appointment for three o'clock next day, and the two boots begin to descend the stairs. Taupin discreetly hides himself, and sees "un homme de cinq pieds six pouces au moins, de trente-quatre à trente-cinq ans, décoré, militaire . . . . un homme superbe." He was singing the very air that Taupin himself was singing five minutes before, and doubtless Taupin's wife had taught it to him. Taupin allows the military gentleman to depart quietly, and then goes upstairs, says not a word of what he has heard, kisses Madame Taupin, calls her his "Loulou," makes himself a glass of grog, and goes to bed. Paul interjects, "C'est plein d'intérêt!" Next morning Taupin packs his carpet-bag, and tells his wife that he is going to Rouen. "I wonder," he says, "that since the opening of the railway all guilty wives do not shudder when their husbands tell them they are going to Rouen." A husband who wishes to detect his wife tells her that he is going to Rouen. His wife goes with him to the station, kisses him, and asks when he will be back. He answers, "In a week." He travels as far as Maisons, gets out, and takes the train back to Paris, "et vous devinez le reste." His friend Paul, recalling him from general principles to the particular example, inquires for "cette pauvre Madame Taupin." He explains that he had calculated to take the return train, which would reach Paris at three o'clock, so as to have comfortable time to walk to his dwelling and catch the military gentleman with the "chanson" of yesterday upon his lips. But, unfortunately, he took a walk and missed the train, and thus found no proof when he returned home. However, as he had prepared a scene, he chose to have it out. His wife defied him, told him that if he did not like her he should not have married her, reminded him that the premises and all upon them belonged to her, and turned him out of doors. "So," says he, "here I am, without a home, but also happily without a wife." Maximilian in turn tells his story. He fell in love with a dancer by whom he was half ruined, and for whose sake he was wounded in a duel. Taupin consoles him by remarking that the dancer might have ruined him altogether, and his rival might have killed him.

But it is now time to return to the hero of the play, Paul. His friend Maximilian asks him when he will be married. He puts off the answer, as he is still thinking of Diane de Lys and of the oath he has sworn to be revenged on her husband. Maximilian had given his friend prudent advice which he repeats. He should settle down to his work, return to his mother and his friends, forget a love which could not last, and above all thank Heaven that the whole of his life was not encumbered by a woman. As regards the Countess, he had nothing for which to blame himself. If they were separated, it was the fault of events, of circumstances, of the exigencies of society. But Paul would not listen to his friend. He persisted in following the Count, who travelled onward, keeping vigilant guard over his wife, but taking apparently not the slightest notice of the attendant Paul. At last that happened which might have been foreseen. The best pedestrian, even when he is in love, cannot keep up for ever with a postchaise. Paul's money was spent, and he was obliged to return to Paris, paint pictures, and sell them at half price to replenish his purse. Now, continues the sage Maximilian, there are men whom such a prank would have ruined, but it did Paul good rather than harm. The story just spread far enough to reach the ears of an elderly widow lady, "très-spirituelle," who desired that the hero of it might be presented to her. The widow lady had a daughter, who, instead of seeing the ridiculous side of Paul's adventure, only saw the romantic side of it. The young lady falls in love with Paul. She has a million by way of fortune, she is charming as an angel, and she declares that she will never marry any one except Paul. Her mamma approves. Paul visits at the house, and pays attentions, and when the moment comes for decision he hesitates, and rejects that occasion "qui se présente une fois dans la vie de l'homme, de faire son bonheur et d'assurer sa fortune." We must allow that Maximilian is not alone among mankind in enunciating principles which are superior to the practice which he confesses.

Nobody can help seeing and admiring the skill with which this fifth act is framed to bring about the catastrophe. The defect of it to English eyes and ears is that Paul and Diane fail to interest English minds in troubles which originate in disregard of the ordinary principle of morality. That which is done in France is done in England, but it is talked about, and we might almost say thought about, in a different way. But we can at least emphatically approve Taupin's reinforcement of the argument of Maximilian:—"Une famille, cinquante mille livres de rente, vous pourrez faire de l'art avec des pinceaux d'or. . . . Mariez-vous, mon cher, mariez-vous." Paul cannot listen to these discreet friends. Diane has promised to write to him, and he will continue to believe in her fidelity, at least, until she bids him cease to think of her. Maximilian answers, "Eh! mon cher, en amour il n'y a d'adieu éternel que celui qu'on ne dit pas." We do not care much for the sentiments of this play, but its maxims of worldly wisdom are beautiful. The same writer adds, with almost equal truth, that a woman who loves can always contrive to write. He begins to reproach Paul for allowing his proposed marriage with the romantic young lady of fortune to be talked about, but immediately he perceives Paul's true motive, which was that the report should reach the ears of Diane, and bring her back to him.—"C'est ce que nous appelons du galvanisme d'amour." However, he lectures Paul severely for trifling with a girl who loves him, and for the sake of a woman who does not. The Countess, he says, has changed her mind, and now loves the only person for loving whom Paul could not forgive her, to wit, her husband. Diane is a woman of originality. After being shut up for some time, she grew tired of tears, and merely for variety took to contemplating her gaoler-husband. To her surprise she found that he was "spirituel, élégant, beau garçon." She said to herself that she had been looking far for that which was close at hand, "et la voilà qui aime le compte." In proof of this statement he produces a genuine letter of Diane, in which she declares that peace is restored to her life, which she gives wholly to her husband. Paul believes, or seems to believe, this story, and declares his intention to go in for the heiress. "Come then," says Maximilian, "one has a deal of trouble to make you happy." Paul desires to be left alone that he may write to his mother. The experienced student of French plays is aware that the hero's mother always turns up in his thoughts when they become serious. But the real purpose of the friends' exit is that Paul may deliver a soliloquy. He turns out his drawers which contain letters of Diane and of Berthe, and perhaps of other ladies who are not specified. He is in a moral and self-judging mood of mind. Berthe loved him, and he made her suffer. He loved Diane, and she made him suffer. He will keep "un pieux souvenir" of Berthe, but of that other woman he will keep nothing. He tears up Diane's letters, and being partially tranquillized by this exercise, he proceeds to write to his mother. We shall best appreciate the difference between the French and English stage by conceiving an English actor reading aloud as he commits to paper a letter to his mother. It might be the fault of the actor or the audience, or both, but the inevitable result would be to throw ridicule on what is meant to be a solemn scene. "There is but one love which never deceives, and that is a mother's love." This sentiment, however beautiful, is, we think, out of place at the beginning of a letter which ends by announcing that the writer is going to be married. But small criticism should be hushed in presence of the actual catastrophe of the play. Diane enters softly, stands beside him, and calls him by his name. He receives her coldly and addresses her as Countess. She, with a just estimate of her lover's character, suggests that there is a woman on the premises. He assures her that they are alone, and copious explanation follows. Each disbelieves the explanation which the other gives. She becomes excited, and protests that her assurance of fidelity is that of a woman "qui n'a jamais menti à sa parole." Of course she forgets that a trifling exception to this statement exists as regards her marriage vow. He repeats his protestation, and adds, "Je vous le jure sur ma mère." We cannot help thinking that his mother has no call to appear in this conversation. However, each explains to the final satisfaction of the other. The lady's morality slightly confuses our ideas. Her father was dying, and it would have been wicked to quit his bedside, but it is apparently not wicked to quit her husband's house. She has made up her mind to go to Paul's mother, who after all has more to do with the affair than we had supposed. The mother will sympathize with one who loves her son. The two women will live together, and Paul will visit them. Thus they will lead quiet and happy lives—the world forgetting, by the world forgot. Unfortunately for this dream of bliss the door rattles, and the Count is heard forcing entrance. Paul demands, rather selfishly, as we think, a pledge from Diane that she will devote herself if he lives to his love, and if he dies to his memory; then he takes a last kiss, and exclaims, "Que la volonté de Dieu s'accomplisse!" He takes a pair of swords and advances towards the Count, expecting a fair duel. But the Count, having no chivalric nonsense in his head, shoots Paul while he has the chance. Paul exclaims, "Ma mère!" and falls dead. The friends enter at this moment and pose themselves while the Count explains that Paul was the lover of his wife, that he has done himself justice, and has killed Paul. It is only necessary to add that the best acting is needed to make this scene tolerable, even in French. The closest English translation is the most effectual burlesque of it. The part of Diane was performed by Madlle. Desclée "for the last time" on Saturday. We understand this to mean that arrangements had been made for the appearance of M. Brasseur in the present week; but there are likely to be other opportunities of seeing Madlle. Desclée as Diane, and perhaps as Frou Frou. But it is wise in a manager to give the public too little rather than too much of a good thing. English managers are too apt to do every play to death, and even to undesired resurrection.

THE GRAND PRIX AND ASCOT.

DONCASTER has met with the same fate at Paris which befel a far greater Derby winner, Blair Athol. The latter crossed the Channel to be beaten by Vermout, and a son of Vermont has this year trod in his sire's footsteps. There is no doubt that some horses stand the sea passage badly, and have not sufficient time after their journey to get round again. Moreover, the course at Longchamps is not one of the best in the world, and the turf is very different from that to which English horses are accustomed on their training grounds. Yet our horses have been successful on four occasions at Paris, and two Derby winners have added the Grand Prix to their Epsom triumph. The race, however, has never carried out its founder's idea of bringing together the best horses of both countries; and with Epsom just before it, and Ascot immediately following it, there is no wonder that English owners should be as a rule averse from exposing their representatives to the risks of such a tedious and fatiguing journey. There

was but a small field of seven last Sunday, to which we contributed two only, Doncaster and Chandos. Boiard, the winner of the French Derby, and Apollon, his stable companion, Flageolet, Franc-Tireur, and Louvigny made up the number. Mr. Merry had Marie Stuart engaged as well as Doncaster, but evidently thought that he had the race at his mercy with the Derby winner. According to the Two Thousand and Derby running he was quite justified in his opinion, for Boiard was a long way behind Kaiser and Gang Forward at Newmarket, and we all know how easily Doncaster defeated the latter pair at Epsom only a fortnight ago. No race, however, has been so fruitful in surprises, considering that it has only been established ten years, as the Grand Prix; and the easy defeat of Doncaster last Sunday is a repetition of the astonishing ill luck that in former years befell such horses as Lord Clifden and Blair Athol. No excuse can be made for Mr. Merry's horse on the score of condition, for we understand that he looked remarkably well, and showed no traces of having suffered from his long journey. Nor did he meet with any disappointment during the race. Apollon, as in the French Derby, made the running at a great pace, and when his mission was accomplished Boiard, Doncaster, and Flageolet were found lying well together. On the retirement of his stable companion Boiard assumed the lead, and for the last half-mile it was a real struggle which of the three could stay the longest. Doncaster tried vainly to wrest the lead from Boiard, but was never able to get fairly up to him, and the French Derby winner held his own to the end, and won by superior staying power, the victory being accomplished by a clear length. Flageolet finished with a rush, and just secured the second money, while Doncaster had to put up with the third place. Mr. Merry's horse was clearly beaten on his merits, for a more fairly ridden race could not be seen, and the winner honestly proved himself the better horse of the two. Boiard, it will be remembered, finished before Doncaster in the Two Thousand, but then the Derby showed that Doncaster had improved 21 lbs. since the Newmarket meeting, and now the Grand Prix shows that Boiard has improved still more. Flageolet, too, who so utterly disgraced himself in the Two Thousand, must have made astonishing improvement to beat the conqueror of Kaiser and Gang Forward over a mile and three-quarters course; and, altogether, the three-year-old running is more hopelessly complicated than ever. We cannot, however, jump to the conclusion that the English Derby was a mere chance victory, and that if Mr. Savile had sent Kaiser to Paris he would have secured the Grand Prix; but we regret that Mr. Merry did not send Marie Stuart to Paris, and keep Doncaster for the Prince of Wales's Stakes at Ascot. He would have had to give 4 lbs. to Kaiser and Gang Forward, which, according to the Epsom running, he could well have done, and the question whether the Derby was a true-run race or not could have been settled at once and for all. Now the answer is indefinitely postponed, for it is not impossible that Marie Stuart will represent Mr. Merry in the St. Leger instead of Doncaster. We may add, that all we have heard of the running in the French Derby and the Grand Prix confirms us in our opinion that, had Apollon started in the English Derby, he would have proved a formidable antagonist to the winner.

The first day at Ascot was as usual rich in good racing. Large fields contested the first two events, the Trial Stakes, and the Maiden Plate for two-year-olds. The uncertain Moorlands was successful in the first, and a very promising son of that rising sire Saccharometer, Sugarcane, won the second. Sweet Note, who was only beaten a head, is also by Saccharometer. A poor field of nine came to the post for the rich Prince of Wales' Stakes, which would have been a tame affair indeed had not those gallant opponents Kaiser and Gang Forward met, for the third time this season, to struggle for supremacy. It was fortunate that each had to carry the same penalty, thus raising their weight to 9st. 1 lb., for they have proved themselves so inseparable that any advantage in the weights on one side or the other would quite spoil the interest of their encounters. Their seven opponents were of little account, even the allowances which most of them received not enabling them to cope with the first and second in the Two Thousand. Mr. Merry's representative, indeed, Highland Laddie, to whom Kaiser and Gang Forward had to give 12 lbs., attracted considerable attention, especially as it was rumoured that he was not such a very long way behind Doncaster. His performance by no means confirmed this flattering report; though a powerful colt, he shows but little quality, and his action is high, and not suited to a severe course. The remaining starters were Suleiman, The Preacher, Marquis Townshend, Miss Buckland, and Combat, from M. Lefèvre's stable, and Capuchin—a poor stamp of competitors for one of the greatest races of the year. It is sufficient to say that The Preacher showed considerable speed for a mile; that Highland Laddie's fighting action exhausted his strength before he reached the straight, and that from the distance the race resolved itself into a match between Kaiser and Gang Forward. Between them there was as punishing and determined a struggle as in the Two Thousand and Derby, and this time Kaiser just got the best of it, and beat his old opponent by a head. Each has now beaten the other by a head, and once the judge has been unable to separate them. Each has deservedly won one of the great prizes of the year, and in the greatest of all neither would take advantage of the other. We cannot call to mind another instance of two good horses maintaining their relative form with such exactitude in race after race. It is true that neither of the pair is a first-class horse; but first-class horses might envy the gameness, the resolution, the perseverance with which either fights out a battle to the best of his powers. There was a general opinion that Gang Forward was the better stayer of the two, and that he would be better served by the long ascent at the end of the race; but, on the contrary, he was more exhausted than his opponent towards the finish, and the long tiring hill troubled him more than Kaiser. Not from want of heart, but from sheer distress, Gang Forward swerved in the last hundred yards, while Kaiser ran on to the end with unflinching gameness. Horses cannot go on running such desperately close races, time after time, as if they were machines, and it would not be surprising if, at the next meeting of the pair, one of them were to play the coward. At present, however, they cannot be separated by the acutest handicapper; and whatever their relative reputation may be, as compared with the heroes of former years, there is no doubt that truer and more trusty horses never galloped on a race-course. Mr. Savile followed up his well-won victory in the Prince of Wales's Stakes by carrying off the Ascot Stakes, the principal handicap race of the meeting, and once the most important handicap race in England. Only nine runners contested it on this occasion; and Shannon, Vanderdecken, Falkland, Houghton, and Uhlan were the best of the nine. Shannon, however, is not the Shannon of 1871, or with her lenient weight she would have carried off this race in a canter. Vanderdecken is a vastly over-rated horse, and was fairly beaten by such a plater as Houghton; while Uhlan squandered his field in the last half-mile, and won in a walk. This race is now one of minor importance, though, like the Goodwood Stakes, its name has survived its reputation. The Queen's Stand Plate, once the T.Y.C., was a mere gift to Prince Charlie, as any other race, over the same distance, against any possible competitors, at weight for age, would be. Blenheim is a speedy horse, and Fordham rode him, but he could not make Prince Charlie gallop; and the two-year-olds, who have all the best of the weights at this race, and usually manage to secure it, could never get within sight of his tail. A select but good field started for the Gold Vase, Hannah, Struan, Cecilia, Thorn, Dutch Skater, and Lilian being among the runners. The wretched form of the three-year-old fillies was illustrated by the inability of Cecilia, the winner of the One Thousand Guineas, to get anywhere near the front; and the finish of the race was left to Hannah and Thorn, the latter, in the second division of the second-class three-year-olds, beating Baron Rothschild's mare by a neck. As far as quality went—estimating quality by the importance of the prizes won by the different competitors—this was the best field of the day, for it included a winner of the Oaks and St. Leger, two winners of the One Thousand Guineas, a winner of the Great Metropolitan, and of innumerable Queen's Plates, and such useful animals as Struan and Lilian. The victory of Thorn somewhat improves the form of this year's three-year-olds; yet he had some difficulty in shaking off Hannah, and Hannah, though a good mare, was neither an Achievement nor a Sunshine. The Biennial, for two-year-olds, was carried off by Lemnos, a son of Thunderbolt and Laura, who showed good form, inasmuch as among the beaten horses were Archduke and Birbeck, and the highly reputed Couronne de Fer had to put up with an indifferent third place.

On Wednesday Kaiser and Gang Forward had each a nice little exercise canter, and being relieved from the necessity of breaking one another's hearts, each won his little race—the value of each, by the way, was substantial—just as he pleased. Kaiser had only His Grace, King George, and John to beat, and won his six hundred sovereigns without having to go out of an easy gallop. Gang Forward's work was more difficult, for he had to give weight to Highland Laddie and Andred, but he was equal to the task, and won his race just as easily as Kaiser. Marie Stuart gave 7lbs. to Wild Myrtle and Silver Ring in the Coronation Stakes, and beat them in such fashion as to show what an absolute certainty the Oaks was for her. The Triennial, for two-year-olds, fell to Sugarcane, who beat his five opponents as readily as on the preceding day; and the Royal Hunt Cup was won by Winslow, who carried the top weight, from twenty-six opponents, by a splendid effort of horsemanship on the part of Fordham. Speed was well represented in this race, Laburnum, Helmet, Oxford Mixture, Alava, The Pearl, Soucar, and the highly-priced Lord Gough being among the runners. Winslow showed fair form as a two-year-old, and might have taken his own part in the Derby last year had he not met with an accident a day or two before the race which incapacitated him from starting. His victory on Wednesday was mainly due to his rider, for a hundred yards from home he looked quite out of the race, and Reine had such a clear lead that her defeat seemed impossible. Fordham brought up Winslow just at the last moment and won on the post—his knowledge of how to win on the post being one of the characteristics of his riding which we often have occasion to notice at Newmarket.

The Gold Cup dwindled down at last to very poor dimensions. The entry was not good to begin with. None of the crack three-year-olds were in it, Thorn and Flageolet being the best. A good race seemed probable between Cremorne and Favonius, but the scratching of Baron Rothschild's horse dashed those hopes to the ground. Soon after his withdrawal Wenlock also was struck out; and the race became on paper what it turned out to be on the day—a gift to Cremorne. Flageolet, who, like other French horses, seems not to mind travelling backwards and forwards between France and England in the least, appeared none the worse for his race last Sunday; but he could not fairly extend Cremorne, who was in perfect condition, and, in addition, was bound, on his merits, to beat any three-year-old at weight for age. It is known

that he is better than Kaiser at weight for age; and Kaiser is very nearly at the head of the three-year-olds. The failure of the Cup race is much to be regretted, for there are few contests of that class now remaining in England, and at Ascot hitherto their prestige has been tolerably maintained. A race between Cremorne and Favonius would indeed have been worth witnessing; but directly the pen was put through the name of Baron Rothschild's champion, it was certain that the Ascot Cup this year would practically be walked over for by Cremorne.

REVIEWS.

LIFE OF GEORGE GROTE.*

MRS. GROTE'S book is an excellent specimen of one of the two admissible kinds of biography. A perfect Life can only be written by a friend who is in a sufficiently independent position to criticize as well as to appreciate the subject of his narrative. Near relatives and wives are, as a general rule, disqualified both by their own natural feelings and by a sense of propriety from the task of depicting the characters of eminent men; but the next best likeness to a portrait taken by an artist is a photograph, or unconscious revelation of moral and intellectual features. Mrs. Grote's work is almost an autobiography of her husband; and probably he could not have himself composed it with equal fidelity and force. If he had ever thought of writing his own life, his narrative would have been a mere record of thoughts, of studies, and of literary and political designs. To the lifelong companion of his career he was a politician, a scholar, and a historian; but he was before and above all things himself. The sustained and admiring sympathy which is now and then varied by kindly impatience in the notice of trifling foibles, enables Mrs. Grote to tell her story like an autobiographer from within. When she first announced her intention, Mr. Grote declared that of his life there was absolutely nothing to tell; but he admitted the truth of the reply that his life would be the history of his mind. Even his original protest was not wholly well founded. Fifty or sixty years of earnest toil, of growing fame, and of uninterrupted prosperity, are not within the range of ordinary experience. His resolute persistence in severe study down to the end of his life, from the time when he was transferred from school to his father's banking-house, belongs perhaps to the history of his mind. The bank had been established by his grandfather, Andreas Grote, an emigrant from Holland, and the historian of Greece pleased himself with the fancy that he might perhaps be connected by blood with the famous Hugo Grotius. At the Charterhouse, where he received his only regular education, Grote was a schoolfellow of Bishop Thirlwall, of Havelock, and of the two Waddingtons, one afterwards Under-Secretary of State, the other Dean of Durham. Few events in literary history better deserve to be recorded than the generous enthusiasm with which the Bishop of St. David's welcomed the publication of a History of Greece which was in his judgment destined to supersede his own. Almost the only disturbance of the smooth course of his prosperous career was caused by the harshness of his father in delaying his marriage, and in enforcing strict attendance at the bank. His mother's narrow religious fanaticism probably accounted for his extreme and lasting antipathy to theological belief. Mr. Grote's temperament might, in different circumstances, have inclined him to the adoption of some austere religious creed. If he had been a contemporary of Milton, instead of being a disciple of Bentham and of the elder Mill, he would probably have been a leader among the Presbyterians or the Independents. One proof that his Republicanism was of the ancient and orthodox kind was furnished by his inclination to the cause of the South during the American Civil War. Constitutional rights asserted with heroic pertinacity were to him more sacred than philanthropic sentiments, and even than democratic commonplaces. In his personal character Mr. Grote resembled the type of the English Commonwealth rather than that of modern democracy. A Radical and a Republican, he maintained the stately bearing which might have become the friends of Hampden and Sidney. In his later years he was remarkable for a formal and gracious courtesy of demeanour, which accorded well with a handsome and dignified presence. Mrs. Grote is fully justified in applying to him the familiar passage in which Chaucer sums up the character of his perfect knight. It may readily be believed that in all his life Mr. Grote never treated a human being with contumely or arrogance. It may be collected from the letters which are published, and from the whole tenor of the biography, that, while he was simple and gentle, he was uniformly serious. His acuteness of intellect may perhaps have enabled him to understand humour and irony; but probably from youth to age he never uttered a joke. The only taste which he possessed which was not strictly intellectual seems to have been a wholesome love of horses. When he was at one time staying with Mrs. Grote in the neighbourhood of a trainer's establishment, they were in the habit of getting up early to see Blink Bonny and her stable companions taking their gallops. He also liked whist, which occupies an intermediate place between intellectual labour and recreation; but it was his greatest pleasure, when he was not reading or writing, to discuss classical and historical questions with Sir George Lewis, or metaphysics and political economy with Mr. Mill or Dr. Bain. Mrs. Grote, with sound judgment, shared the main current of his life in her unfailing attention to the progress of his great historical work.

In her own words, "Mrs. G. Grote was habitually studious, after her fashion, under the direction of her husband, who laid great stress upon her cultivating the ratiocinative vein of instruction, above all logic, metaphysics, and politics; and she accordingly strove to master these subjects, out of deference to his wish, and in order to qualify herself to be associated with his intellectual tastes and labours, as time wore on." Neither teacher nor pupil probably appreciated the great superiority of the gifts which are displayed in the present biography to any direct result of "the ratiocinative vein of instruction." The motive and the practical result of the lady's studies mattered more than her attainments in metaphysics. It was at her suggestion that Mr. Grote designed and commenced the *History of Greece*, about the year 1823. The progress of the work was afterwards interrupted by his entrance into political life, as member for the City of London in the first Reformed Parliament. He had previously become a principal leader in the small party then called the Philosophical Radicals, including Sir W. Molesworth, Mr. Roebuck, and Mr. Charles Buller. Mr. Grote took an active part in all the proceedings of the extreme Liberal party, and he introduced in several Sessions Bills for the establishment of vote by Ballot; but the country was with a sound instinct averse to further organic changes; and the progress of natural reaction reduced the handful of ultra-reformers to a powerless condition. It was without regret on his own part, and perhaps without loss to the country, that Mr. Grote retired from Parliament in 1841, to devote the rest of his life to the composition of his History and of his treatises on Greek philosophy. Thirty years later, when his early opinions were adopted by Mr. Gladstone's Government, the enthusiasm of Mr. Grote for the Ballot had sensibly cooled. "I confess," he said to Mrs. Grote, "that, since the wide expansion of the voting element, the value of the Ballot has sunk in my estimation." It may be remembered that at the same time the Minister, at a loss for a reason to justify his conversion, announced that his former preference for open voting had been removed "since the wide expansion of the voting element." The practical politician had reasons for conforming to the creed of the majority, while the veteran supporter of the Ballot had become less sanguine with advancing years. Prejudices, as well as political convictions, relaxed under the genial influence of time. Mrs. Grote naturally regretted the determination of her "somewhat intolerant partner," during the early years of their married life, to exclude himself and her from the aristocratic society to which she was attracted by taste and connexion. It seems strange that fifty years ago a refined scholar, possessed of an easy fortune, should have regarded the classes with which he might most suitably have associated with the dislike which Madame Roland and her friends entertained towards French princes and nobles in the days of the Revolution. In this respect Mr. Grote had been biassed by the precepts and example of Mr. James Mill, who cultivated the bitterest hatred against the classes which then governed England. No impartial observer of competent capacity and with suitable opportunities can doubt that the art of society attains its highest perfection among those who have time and inclination to make it their study, and means to adorn it with luxury and taste. When Mr. and Mrs. Grote visited Lord Lansdowne at Bowood in 1857, "the magnificence, order, elegant entertainment, and withal liberty of individual occupation which reigns in that establishment, struck both Mr. Grote and myself much." Two years before his death, Mr. Grote declined the offer of a peerage, which could not have been more suitably bestowed. In his letter to Mr. Gladstone he explained that "the honourable status and title" would at his age and "to his peculiar feelings be an unwelcome change"; but his main reason for refusing the honour was his unwillingness to undertake new and weighty duties, to which Mr. Gladstone had courteously referred. It is pleasant to find that, instead of despising the bauble which would formerly have roused his Republican indignation, "the incident was naturally productive of agreeable feelings, both to himself and to his intimate friends, and I will confess that it not seldom formed the subject of our quiet domestic talk." Although a seat in the House of Lords involves no necessary share in political or legislative business, it was not consistent with Mr. Grote's principles or habits to convert any office or dignity into a sinecure. To the last he was actively employed as a trustee of the British Museum, a member of the Council of University College, and Vice-Chancellor of the University of London.

Mrs. Grote wisely leaves to professed scholars the duty of estimating the value of her husband's contributions to literature and to history. Her function is to record the untiring labours which after the close of the short Parliamentary episode occupied the remainder of his life. Although he was deficient in grace and felicity of style, his History of Greece is not likely to be superseded. He has probably exhausted the limited stock of materials which can scarcely hereafter be enlarged; and future rivals will only be able to controvert some of his practical and political conclusions. Since the time of Mitford, the history of ancient Greece has been written with more or less of party spirit; and even the serene intellect of Thirlwall has not been unaffected by political prepossessions. Mr. Grote's admiration for the Athenian practice of secret voting, and his celebrated apology for Cleon, are not the result of purely dispassionate investigation; but a controversial interest in the events and persons of the distant past, if it some-

* *The Personal Life of George Grote.* By Mrs. Grote. London: John Murray. 1873.

times interferes with perfect impartiality, affords the best security against vagueness and unreality. Mr. Grote's Athenian statesmen and orators are living men whom he might have met in society or in the English Parliament, and not conventional shadows of the type which in the eighteenth century was indicated under the title of "the Anciente." Mr. Grote's merit as an historian who had also been a man of business engaged in public life was appreciated in the native land of profound book-learning. The ex-Prussian Minister Schön remarked, in a letter to Varnhagen von Ense, on

the false portraits which mere scholars have depicted for want of knowledge of the world. How greatly the death of Leonidas has been overrated; and, on the other hand, the scholars (*Philologen*) have not nearly done justice to Perikles. He is now to me the first of the Greeks. Lobeck, now the patriarch of scholarship at Königsberg, takes his hat off to Grote, and his colleague Lehrs bends his knee. I should like to know what Boeckh, Meineke, &c., say of the work of the London banker.

Although none but a politician can understand ancient or modern political life, Mr. Grote's industry and his absorption in his subject were rather German than English. His correspondence with Sir G. Lewis turned in great measure on questions of ancient history and philology; and, if he had left no fuller record of his studies, some of the letters would sufficiently prove the ripeness and soundness of his scholarship. An argument against a version in which Lewis and Waddington had concurred, of a phrase put by Thucydides into the mouth of Pericles, is an excellent example of the application to a verbal discussion of general considerations deduced from the character of the speaker and the audience. Sir G. Lewis was probably convinced by Mr. Grote's arguments that the boast of "cultivating the fine arts without needless expense" would neither have been pronounced by Pericles nor relished by his hearers:—

The ornamental outlay at Athens had been prodigiously great, and was also quite recent. Moreover it had been intentionally great, in order that the "visible splendour" of the city might become imposing. . . . The Athenians would think it the reverse of a compliment to be told that they had got the result at small cost. A marble statue of Athena might be as fine, artistically speaking, as one of ivory and gold. Nevertheless they thought the latter material more suitable, because it was more costly.

Mr. Grote's somewhat recondite interpretation of the passage recalls the contrast in Horace:—

> Privatus illis census erat brevis;
> Commune magnum.

The composition of the History furnished the writer for many years with congenial occupation; and the reception of the work from its commencement must have afforded him unqualified pleasure. It was not the smallest element of his happiness that his present biographer evinced the keenest interest in the History by minute criticism of every part as it was written. The chief drawback to a literary life is the intellectual solitude which is rather mitigated than relieved by mere domestic companionship. "Our History," as Mrs. Grote sometimes calls it, must have been far more interesting to the author than if he had been sole owner of the property which he had created. Mrs. Grote called a cottage which they had built at East Burnham out of the profits of the book, History Hut, and it was there that, at the end of 1855, the History was finally completed. On a corresponding occasion Gibbon paced his terrace looking over the Lake of Geneva. Mrs. Grote, not less appropriately, "had a little bowl of punch brewed at Christmas for our little household at History Hut, Grote himself sipping the delicious mixture with great satisfaction, while manifesting little emotion outwardly, though I could detect unmistakable signs of inward complacency, as I descanted upon the happiness of our living to see this day, and so forth." The void which might have been created by the loss of customary occupation was amply filled by the composition of the elaborate treatises on Plato and Aristotle. Fortunate in nearly all the circumstances of his life, Mr. Grote had measured for himself a task which nearly coincided with the time which remained at his disposal. He enjoyed with philosophic moderation the well-earned fame of his later years, taking especial pleasure in the respect and admiration of the younger race of students during a visit which he paid to the present Dean of Westminster, who then resided at Oxford, as Professor and Canon of Christchurch. He died after a short illness on the 18th of June, 1871, at the age of seventy-six, and he was buried in Westminster Abbey. Mrs. Grote has fully answered the doubt which he expressed whether there was anything in his life worth telling.

TODHUNTER'S CONFLICT OF STUDIES.*

THIS volume of essays is a very opportune contribution to the right understanding of some questions about which there has lately been a marked increase of general interest, and which are not likely to be left much longer without some attempt to deal with them on an extensive scale. Much as University education has been discussed, there is still much wanting to complete a satisfactory exchange of ideas (if we may so apply the convenient phrase of modern diplomatic cant) between the Universities and the public. The Universities have some difficulty in discovering what sort of provision for the higher education of English youth is desired, and the public, even when they know what they wish for, have apparently no very clear notion of what actually exists. We have here the statements and opinions of an eminent Cambridge teacher on various important points of the Cambridge system which are peculiarly within his own knowledge, and on which the judgment of an enlightened expert will be especially valuable for the purposes of any proposed new schemes. We do not know, indeed, that Mr. Todhunter's essays will be acceptable to the school of University reformers who want to reconstruct everything from the outside. For he proceeds throughout on the assumption that a man who has spent several of the best years of his life in administering an elaborate system may reasonably be expected to understand its strong and its weak points better than one who knows it only by report, or who has passed through its discipline but ceased to be familiar with it. And this assumption will no doubt appear unwarrantable to those who believe that re-organizing a University comes by nature, and that nothing stands in the way of its being done to-morrow but the prejudices and obstinacy of the existing authorities. Mr. Todhunter also speaks in a somewhat reserved, not to say sceptical, tone, of the results to be looked for from sundry untried experiments which are propounded by their advocates with an air of infallibility. Such advocates will regard Mr. Todhunter's guarded counsels as only an additional proof of the hopeless insensibility of the Cambridge mind to all new impulses. Again, those who wish to turn the Universities into large shops for selling useful knowledge at the lowest possible remunerative price will certainly find nothing whatever to their liking in these pages, as indeed we should be very sorry if they did.

The object of our Universities is not to be warehouses of information. What is aimed at is to give the best possible general training, and the best attainable means of cultivating special branches of knowledge, to those who will take advantage of them; and also, by whatever means we can, to induce those who cannot or will not do this to go through processes which will give them at least a tolerable tincture of mental and social discipline. The first of these objects is already attained in a very high degree in some departments of learning. Mr. Todhunter's vindication of what is done in his own seems very sufficient. And we see no reason to doubt that results of the same quality may be produced in other studies which are comparatively in their infancy when they have fairly taken root, so as to be pursued with proportionate energy and method. As to the second object, it would be absurd to deny that the success is in many cases very partial; but the failures are in great measure due to causes not under the control of the Universities or Colleges. University teachers are exhorted to devote themselves to original research, higher scientific culture, and so forth, while in fact their lecture-rooms have to be school-rooms where they attempt to make men learn the rudiments which ought to have been learnt at school. And why are they not learnt at school? Speaking on behalf of the much-abused college don, we might leave the schoolmaster to account for it. But we suspect it is not so much the schoolmaster's fault as the parent's. So long as English parents send their boys to school without really caring much whether they work or not, which undoubtedly is often the case, so long will many English boys take no particular trouble to learn anything at school, and go up scandalously unprepared to college. Thus the college has not a fair start, and the whole standard of University work is kept down far below what it ought to be, and what the Universities and Colleges would be only too glad to make it if the public would let them. If the parents would help the schoolmaster more in the beginning, they would not so often have reason to complain of the end.

We have mentioned a high special education for which a very elaborate machinery has been developed, and a very moderate general education, as the two distinct provisions made at Cambridge for different kinds of students. What becomes of those who want a high general education, but not a high special education; who wish to acquire a cultivated and scientific habit of mind, but do not aim at being experts in the utmost refinements of mathematics or scholarship? This question hits the point which seems to us the weakest in the Cambridge system. The present state of things as to mathematics is excellently described by Mr. Todhunter. He says:—

Our aim seems to be not so much to afford an adequate discipline to all our students, as to lavish superfluous care upon a few, with the view of creating professional mathematicians. . . . There are two classes of students of very different characters who are to be tried by the same tests. There are six or eight men in every year who are competing for the highest places and for the fellowships to which such honours lead; and these for the most part have such an amount of mathematical power that very difficult papers may be submitted to them, without any extravagant disproportion, at least in quality, between what they are required to do and what they really accomplish. Then we have on the other hand a large number of students who have no particular taste for mathematics, whose attainments are gained only by patient and laborious application; for this class the papers set are on the whole far too difficult. It would seem that the examination by which we endeavour to discover who are the best possible candidates for high mathematical appointments, and the examination by which we ascertain if students of moderate ability have gone through a salutary course of discipline with steady attention, are altogether different in their objects, and can scarcely take with advantage a common form.

The same remarks apply, with very little change, to the classical examinations. It is disheartening to think of the time consumed in Greek and Latin verse composition by men who might derive much profit from being made sound scholars up to a certain point, but who will never be accomplished enough to find either profit or pleasure in these refined exercises. But it is safer for examination purposes to produce average translation and average verse

---

* *The Conflict of Studies, and other Essays on subjects connected with Education.* By I. Todhunter, M.A., F.R.S. London: Macmillan & Co. 1873.

composition than good translation and no verse composition. A paper of instructions used to be circulated at Eton warning beginners in Latin verse that "A few good verses are worth *much*; many good verses are worth *more*; but many bad verses are worth *nothing*." One result of the Cambridge Classical Tripos is a considerable crop of that which is worth nothing. And the recent additions of higher subjects to the examinations for both mathematical and classical honours all tend to aggravate this over-specialized character of the Triposes. Of course these subjects are important in themselves, and due provision should be made for their being learnt by those who really have time and aptitude for learning them. Especially as to Comparative Philology we must protest against a disparaging allusion of Mr. Todhunter's in his opening essay. We do not know whether it is a good subject for examinations, nor do we very much care; but certain it is that Comparative Philology has given us an instrument of research into the mental, and to no small extent the material, history of whole races of men whose power we are only beginning to know. In the study of language it makes all the difference between a mere registry of facts and an organized science, and the importance of its methods can fairly be compared to nothing less than that of a new calculus in mathematics. But it does not follow, as Mr. Todhunter elsewhere in the book justly observes, from the interest or importance of a novel subject, that the present universal remedy of putting it into an examination (or sometimes making a new one on purpose for it) is wisely applied. It is admitted that the present examinations are already too long. We venture to make a suggestion as worthy of attention, though not pledging ourselves to it, and admitting that it could not be adopted without entailing other changes, both in the University and in the College curriculum, which would have to be well considered. Might it not be a satisfactory way of attaining the desired end of a sufficient general discipline for all, and sufficient encouragement of special studies for the few, if the principle already adopted for ordinary degrees were to be extended to honour degrees? Let there be a general examination about a year earlier in the course than the Tripos now is, followed by optional special examinations. The Smith's Prizes and the Chancellor's Medals, which now have little or no independent significance, and only entail needless extra work on examiners and examined, might under such a scheme be utilized for the final special examinations in the higher branches of mathematics and scholarship respectively, and thus be restored to all their ancient dignity. Doubtless any one who made the suggestion at Cambridge would be vigorously opposed; amongst other things he would be accused of deserting the traditions of the place to copy the Oxford system of Moderations. For our own part, we do not see why the Universities should be above taking counsel from one another, and we think this matter one of those in which Cambridge has something to learn from Oxford. But we have unimpeachable Cambridge testimony on our side. The idea we have put forward is to be found in one of the earliest pages of Mr. Todhunter's book, though he does not pursue it to any consequences:—

> The excessive cultivation for examination purposes of one department of knowledge to the exclusion of others seems to me one of the great evils of our modern system of bribing students by great prizes and rewards to go through our competitive struggles. We are in danger of giving up all pretence of a general course of training for youth, and of allowing and even encouraging boys to select some special subject which they fancy they prefer, or rather perhaps which they least dislike. I should desire quite a contrary system; a scheme of study and examination should be drawn up after due deliberation, and all candidates be required to pass through this before the avenues to special distinction were opened. In theory perhaps this is still attempted; but in practice we seem to deviate from such a course more and more every year at Cambridge. For instance, students of classics are no longer compelled, as they formerly were, to pass a mathematical examination for their degree; and for the most part undergraduates in the colleges are excused from attendance at lectures on the subjects which they do not profess to cultivate. Even where an attempt is made to prescribe some general course the standard in each department is fixed so low as not to ensure more than the simplest rudiments of knowledge.

The general reflections suggested by these essays leave us little room to comment on their details. There is a minor point about fellowships on which we must differ from the author. He disapproves of examining for fellowships as a superfluous addition to the University course, and seems to assume that candidates for fellowships generally continue to read with a private tutor after taking their degrees. Only two Colleges do examine for fellowships at Cambridge so far as we know; and in that with which we are best acquainted—which, however, is not Mr. Todhunter's—it is not the practice for candidates to go on receiving special instruction; on the contrary, they generally begin to take pupils on their own account while they are waiting for their fellowships. The examination is also no mere vain repetition of the Tripos, but acts in some ways as a corrective.

As to the introduction of natural and experimental science into the University course, which is strenuously, and by some even violently, demanded, Mr. Todhunter fears, as a scientific mathetician, that science without mathematics may possibly be made an excuse for evading any exact discipline of the mind altogether. We think his suspicion of the indiscriminate cry for useful knowledge is by no means ill founded.

Those who take an interest either way in the fate of the conspiracy to depose Euclid which is being carried on in this country will find an able apology for him in the essay on "Elementary Geometry." Here again the writer suspects that some of the professed reformers want to substitute the mere imparting of facts for the training of the reason. But this controversy, as well as many other questions more or less debated in Mr. Todhunter's volume, we must leave to be settled by the ultimate verdict of the competent judges in such matters—if only the incompetent will allow them to settle it.

DOROTHY, COUNTESS OF SUNDERLAND.*

THE lovely and lively lady whom Waller's adoration in verse has made celebrated by the name of Sacharissa, the Lady Dorothy Sydney, was a daughter of Robert Earl of Leicester by Lady Dorothy Percy, daughter of the Earl of Northumberland. The famous Algernon Sydney was her brother. Her eldest brother, Lord Lisle, while her father lived, was an adherent of Cromwell, but a man of no political mark; as Earl of Leicester he survived the Revolution, and is the hero of one of Dryden's later adulatory dedications. Another brother, Robert Sydney, was, there is great reason to believe, the real father of the Duke of Monmouth, Charles II.'s putative son by Lucy Walters or Barlow. She had been first Algernon Sydney's mistress, then Robert Sydney's, and then Charles's. Yet another brother, the youngest—younger by three-and-twenty years than Dorothy—was Henry Sydney, an agreeable courtier and a man of pleasure, who in a diplomatic mission to the Hague acquired the friendship of the Prince of Orange, and, being deeply engaged in the counsels which brought about the Revolution, enjoyed the great favour of William III., who conferred on him various high employments, and created him Earl of Romney.

At the age of two-and-twenty Lady Dorothy was married to Henry Lord Spencer of Wormleighton. Their married life, while it lasted, was singularly happy. Her husband, having been created Earl of Sunderland, was slain, in September 1643, at Newbury, where he fought as a volunteer for the King. After four years of happy married life the Countess was a widow with a son and two daughters. The son, Robert Earl of Sunderland, grew up, and became a politician, and has left a worse than doubtful reputation as a leading Minister of Charles II. and James II. The eldest daughter married another Minister of those two reigns, the accomplished and brilliant George Savile, Lord Halifax. It may be added that Lord Shaftesbury married for his third and last wife a sister of Lady Sunderland's husband: he was, therefore, uncle of Sunderland and of Lady Halifax, and he was already the uncle of Halifax by his first marriage with a daughter of Lord Keeper Coventry. It may be further added that Lady Russell, the wife of Lord Shaftesbury's good political ally, was first cousin of the first Earl of Sunderland, the husband of Sacharissa, and of the third wife of Lord Shaftesbury. Thus Shaftesbury, Russell, Halifax, and Sunderland, greatly divided in politics, were a family party. If Monmouth were the son of Robert Sydney, he would be a notable reinforcement of the family party.

The news of the Earl of Sunderland's death at Newbury in September 1643 had reached the Earl of Leicester at Oxford, where he was with King Charles I., and he despatched a messenger to Penshurst, where Lady Sunderland was with her mother, to break to them the dreadful news. Lord Leicester's letter on this occasion to his bereaved daughter has long since been published in Collins's Sydney State Papers, and is a model of kindness and wisdom; it came from one who was reputed very learned and judicious. Mr. Blencowe has published in the appendix to Henry Sydney's Diary and Correspondence the report sent to Lord Leicester by his messenger of the way in which the news was broken to Lady Leicester and her daughter. It was a letter worth publishing; he had disquieted Lady Sunderland, but not told her all; he went to Lady Leicester and told her the fact; she swooned in excess of grief, but, when she came to, the messenger urged her to be firm, and go to her daughter to disclose the whole truth and to console her:—

> This I urged and pressed upon her as much as I could, till she had overcome her own passion, and then I waited on her to my Lady Sunderland's chamber, where, falling on her neck, she spoke such comfortable words to her, and in so affectionate a manner, as I am confident it was not possible for any divine or orator, with all their study and premeditation, to have been able in so short a time to have charmed so great a grief so well.

After nearly nine years of widowhood, Lady Sunderland was married, in July 1652, to a Kentish neighbour of her father's at Penshurst, Robert, eldest son of Sir John Smythe or Smith (as the name was variously spelt), and a relative of Viscount Strangford, who had married her sister, Lady Barbara Sydney. By this marriage she had a son, Robert Smythe, who was grandfather of Sir Sydney Stafford Smythe, Chief Baron of the Exchequer. Lady Sunderland survived her second husband, and died in 1684, the year in which her brother Algernon was executed.

There was no public proof of Lady Sunderland's talent and wit till the publication by Miss Berry, from the Duke of Devonshire's papers, of a small packet of her letters addressed in 1680 to her son-in-law Halifax. Since then some of her letters addressed to her brother Henry in 1679 and 1680 have been published by

* *Some Account of the Life of Rachael Wriothesley, Lady Russell.* By the Editor of Madame du Deffand's Letters [Miss Berry], &c., &c. To which are added Eleven Letters from Dorothy Sydney, Countess of Sunderland, to George Savile, Marquis of Halifax, in the year 1680. Published from the Originals in the possession of His Grace the Duke of Devonshire. London. 1819.

Diary of the Times of Charles II. By the Hon. Henry Sydney (afterwards Earl of Romney), including his Correspondence with the Countess of Sunderland, &c., &c. Edited, with Notes, by R. W. Blencowe, Esq., A.M. 2 vols. London. 1843.

Mr. Blencowe. They are charmingly vivacious, pointed, and epigrammatic. They are full of political and personal gossip, and throw light on the political history of two important years of the reign of Charles II. Horace Walpole or Lady Mary Wortley Montagu did not write better letters. The Countess is in her sixty-second year in September 1679, when her extant correspondence begins. It ends in November 1680.

Old Waller, as she calls him, her poetical adorer in her youth, is now, in his seventy-fifth year, a frequent visitor in her drawing-room. Burnet says of him that at eighty he was the delight of the House of Commons. Her brother Algernon Sydney is often mentioned, never pleasantly. A lady friend, Lady Harvey, has told her that "she wonders nobody shoots him." There is a marriage in the family of a daughter of Lady Lucy Pelham, sister of the Countess and of Algernon, but Algernon will not go near his kinsfolk. "Mr. Algernon never goes to them, though they have sought him, so that I have wondered at it often." He is ill, and the Countess is respectfully civil to him:—"Our brother Algernon is very ill of a cough; he eats nothing but water-gruel; I do not see him, but I have sent to him twice." She is writing to their brother Henry, with whom Algernon is on bad terms. Her civil attention to Algernon brought him to see her, and she treats him as a wayward child:—"My brother Algernon, upon my sending to know how he did when he was ill, has come to me three times, and I believe will continue it, for he seems very well pleased with it. We have not said one word of any difference, and I never contradict him when he says such things as that Sir William Coventry is no more an able than a handsome man."

The martyr Algernon was privately morose, haughty, and quarrelsome. He had returned to England from a long political exile some two years before the Countess of Sunderland's correspondence begins, in time to see his wise and honoured father before the termination of his long life. He had endeavoured unsuccessfully to obtain a seat in the House of Commons for Guildford, at the general election of February 1679, and again for Amersham at the quickly following general election of September of the same year. He had done all he could, but without success, to thwart his brother Henry's election for Bramber, by supporting Sir Charles Wolseley, a Republican, against him. Algernon was for a Commonwealth. With this view, and hoping for support from France for a Republic in England if troubles came on the death of Charles, he gave himself up to the policy of the King of France, and worked hard among the English Republicans and sectaries to make opposition to the King's Administration and difficulties for the King. The Duke of Buckingham did the same. Algernon Sydney and Buckingham constantly frequented the French Ambassador, Barillon, received from him money presents, and were beggars for more. Ralph Montagu, the treacherous foe of Danby, was another of Barillon's paid emissaries; but Montagu was a zealous advocate of Monmouth's succession. Sydney and Montagu were nevertheless on friendly terms. Shaftesbury and Russell disliked Sydney. There is unfortunately no doubt, from Barillon's despatches, that the money given to Sydney was for his own use. This is by way of introduction to some of Lady Sunderland's chit-chat. She writes to Halifax, her son-in-law, July 8, 1680:—

> This I believe is true; my Lord Shaftesbury's and Mr. Algernon's quarrel, who has heard Shaftesbury say he is a French pensioner, and my Lord Sunderland's spy; he pays him again. This is likely to go as high as tongues can. . . . My brother is suspected to be in with the Duke of Buckingham; to-day he is with Wildman; how far that is a sign of it I know not. Mr. Montagu is not in any affair with them, it is thought, for he does not appear amongst them, and talks of going to France next month.

On July 19 she writes about the Whig triumph in the election of Bethell and Cornish as Sheriffs:—

> The news of yesterday every one in the street can send you, and better than I, my dear Lord; yet I must be scribbling. At the choosing of the sheriffs, which are the same again, a loud outcry, "No Yorkist! no Papist!" This by hundreds; and one proposed they beat, so that he is very ill, still crying, "A Yorkist, none of him!" My Lord Russell said he was sorry one of them was chosen, for he was as great a Commonwealth man as Algernon Sydney. I wonder what his Lordship is, if he is not so too, and goes so far towards it. . . . Mr. Algernon is busy, about what God knows. Last night he was called out of my chamber; I asked by whom, and my man said a Quaker. The Duke of Buckingham very lately pretended to have some trouble of conscience, and talked of it to some fanatics, and they said he appeared to be in a good mind, and they were to come to him again to finish the work. At a time appointed he could not be found; and afterwards they heard he was with a wench all that day.

Here is some lively gossip about Shaftesbury, the head of "the mutineers," as she calls his party:—

> Yesterday my brother Smith [brother of her second husband] dined at my Lord Shaftesbury's, and thought him pettish and out of humour extremely. Mr. Hampden [grandson of the celebrated John Hampden; member of Parliament for Buckinghamshire] came in before dinner, and said, "My Lord, have we a league with the Dutch?" "Yes," says my Lord. Says Hampden, "This will be all turned against us; we shall have the Prince of Orange with an army here." They are so mad, they know not what they say. He whispered to my Lord Shaftesbury, and Smith heard him say, "I am afraid this will fool the Parliament." These are good Englishmen and Protestants! I am never better pleased than when I am told these things will be done, that my Lord Halifax will approve, for then I am sure that is good for the nation, and my son [Sunderland] being for these ways too is a satisfaction to me (June 20).
>
> My brother Spencer* was in town yesterday; he had a mind to see his sister [Lady Shaftesbury], and sent to her to meet him at Southampton House [Lord Russell's residence]. He would not go to my Lord Shaftesbury's, because of his proceedings against the Duke. My Lord Russell asked him why he would conceal his. He might have told him, "You are but a blind follower." . . . My Lord Shaftesbury makes love to my Lady Orrery†; she is so well pleased with it, that she is absolutely of his party, and my Lady Betty Felton too‡ (July 8).
>
> There is one place of council I should never have suspected, my Lady Orrery's, till I did know that my Lord Shaftesbury, Duke of Monmouth, and my Lord Cavendish do meet and sup there, and Mrs. Nelly [Nell Gwyn], who the King had forbid letting the Duke of Monmouth come to her house (July 27).

It was a critical day, November 15, 1680, when the Exclusion Bill was rejected in the House of Lords by a majority of 33 (63 to 30), chiefly under the influence of the persuasive eloquence of Halifax. Sunderland voted for the Bill, led by the Duchess of Portsmouth, who had taken up Monmouth, and the King deprived him of his Secretaryship of State. Old Lady Sunderland sided with her son-in-law, Halifax, whom she idolized, and regretted her son's vote. Two days after the vote of the House of Lords, the Commons voted by 219 to 95 an Address to the King, which was moved by Ralph Montagu, to remove Halifax from His Majesty's presence and councils for ever. Lady Sunderland in her lively manner supplies some very interesting particulars in writing to Henry Sydney, November 19:—

> I am full of my Lord Halifax, and will tell what perhaps nobody else will—that a day or two before the Duke's Bill was carried to the Lords, one of the great actors came to him as a friend, I suppose, to tell him if he did speak against it he would be impeached by the House of Commons, or an Address made to remove him from his great place of Privy Councillor; he answered neither threatenings nor promises should hinder him from speaking his mind. How he did it, you who know may judge; on a point, he says, he has studied more than ever he did any, and would have been glad if he could have gone the popular and safe way. He had company enough with him, but my Lord of Shaftesbury and Mr. Montagu have singled him out of the herd of sixty-three that were of his mind, to desire to remove him from the King. . . . As he came out of the Lords' House, he was told that the House of Commons was on this debate, which was very long. He said he would go home to dinner. He did not speak with one man, because they should not say he was making friends, and so he did. In the afternoon his house was full of House of Commons' men. My son was there at one time—that is the thorn in my side, though in everything else they agree; but it cannot be as I would have it, so long as my son is well with Lord Shaftesbury. Halifax has desired the King to let him go; they will come much nearer to His Majesty's concerns than my Lord Halifax. My nephew Pelham‡ voted for him, Sir William Jones against him, but did not speak. In short, he says he will speak his mind, and not be hanged so long as there is law in England. I am not well; pardon this narrative. I were a beast if I were not concerned for so perfect and constant a good friend. You shall soon hear from me again. I love you with all my heart.—D. S.

In a letter written a few days after, November 25, Lady Sunderland corrects herself about Shaftesbury:—"My Lord Shaftesbury disowns having anything to do in it, and my Lord Russell. I heard 'twas Montagu and the two lawyers, Jones and Winnington, who show their profession."

We have given specimens enough to show the historical interest of these letters, and the lively and gushing character of the Countess's style. We should very gladly have more of her letters. Mr. Blencowe's two volumes, the contents of which came from the Earl of Chichester, lineal descendant of Thomas Pelham, Lady Sunderland's nephew, contain a much larger number of letters addressed to Henry Sydney by another Countess of Sunderland, wife of our Countess's son. These letters also are interesting for political gossip, but inferior in style to the mother-in-law's. This second Countess of Sunderland was a Digby, daughter of the Earl of Bristol, the brilliant political promise of whose youth had been destroyed by unstable character and great eccentricities. The lady's letters to Henry Sydney clearly show a sentiment of passion for her husband's handsome and susceptible uncle. There is a refulgent and voluptuous beauty in her portrait by Lely at Hampton Court. She had an intimate and pure friendship with Evelyn. But her character has been drawn in very dark colours in confidential letters of the Princess, afterwards Queen, Anne to Mary, Princess of Orange, afterwards Queen Mary, published by Sir John Dalrymple. Queen Anne's descriptions of her culminate in this invective:—"There never was a couple so well matched as she and her good husband; for as she is throughout in all her actions the greatest jade that ever was, so he is the subtlest, workingest [*sic*] villain that ever was on the earth."

THOMS'S HUMAN LONGEVITY.§

IF every man is sent into the world for a purpose, Mr. Thoms's purpose must be to protect the frontier of longevity from encroachments under false pretences. He may not succeed in strictly defining the boundary line, yet much will have been done by him towards straightening the fence; and that Mr. Thoms has special aptitudes for the task no reader of *Notes and Queries*, certainly no examiner of the list of claims to centenarian honours investigated

---

* Robert Spencer, brother of Earl of Sunderland, her first husband, and brother of Lady Shaftesbury; made a Scotch peer, Viscount Teviot, by James II.

* Lady Mary Sackville, wife of second Earl of Orrery; she was now thirty-four; she was sister of the Earl of Dorset, the poet.

† A young beauty, twenty-five years of age. She was daughter of the Earl of Suffolk, and married to Mr. Felton, a Groom of the Bedchamber to Charles II. She died in the following year. Lord Cavendish was in love with her (Lady Sunderland's Letters, June 9, 1680).

‡ Thomas Pelham, son of Sir John and Lady Lucy Pelham, Lady Lucy being the Countess's sister. T. Pelham had married a daughter of Sir William Jones.

§ *Human Longevity: its Facts and Fictions; Illustrated by Examples.* By William J. Thoms, F.S.A., Deputy Librarian, House of Lords. London: John Murray. 1873.

in this volume, can doubt. Both from the nature of the case and according to the rule of law and common sense that the *onus probandi* lies with the affirmer and not the denier of a proposition, he is clearly in possession of a vantage-ground; though we are not sure that there is much to envy in a position so arduous, for it is one where he can expect but few backers, even the shade of Sir Cornewall Lewis hovering round him to counsel caution, and to admonish him of the untenableness of the centenary line which it was asserted at one time that none might overpass. One might draw a picture of Mr. Thoms's cynic tub on a lonely steep strewn with the demolished cases of Geeran of Brighton and Captain Lahrbusch of New York; but about its sides he must hang up tables and statistics of the ultra-centenarian lives of Mrs. Williams of Bridehead and Mrs. Duncombe Shafto, as well as of irrefragable examples in the other sex, to say nothing of a goodly number of instances which to other than very sceptical minds appear to rest on fairly good evidence. Yet though we may not envy, we must admire, his tenacity of purpose; and candour must admit that a vast deal of methodized information and light is thrown upon a deeply interesting subject by this volume on *Human Longevity*. Few but Mr. Thoms could have persevered against so many difficulties in the form of prejudice and defective information; and, whatever may come of it or after it, his book must remain a valuable contribution to the history and literature of his subject.

It is needless to say that physiologists and naturalists have, as a rule, declined to fix any such limit to human life as Mr. Thoms would draw. Haller held that it might be stretched to two hundred years; and much may be said for Buffon's argument that the "duration of life is regulated by duration of growth"—an argument which the French physiologist Flourens uses to justify the limit of fivescore, if not sixscore years. Even Professor Owen, a chivalrous ally of Mr. Thoms in this battle, admits that the conclusion of Flourens, "that a man may, under favourable circumstances, survive the procreative period (70 years) as long a term as it took to reach maturity and completeness of ossification (viz. 30 years)," is not unphysiological. Only such an age, he urges, is "the rare exception." But it is a fact which cannot be got rid of by imputations of incuriousness or prejudice, that the medical mind in this country and elsewhere not only hesitates to reject as impossible statements as to ultra-centenarian length of human life, but also, in the person of one of the most accomplished and venerable ornaments of the profession, Sir Henry Holland, makes no more demur to the possible prolongation of life to periods of from 110 to 140 years, than Harvey, in the reign of Charles I., did to old Parr's alleged span of 152. We confess our inability to see a satisfactory explanation of this in Mr. Thoms's theory, that "the habit of receiving, and properly receiving, without hesitation, the statements of their scientific brethren as to the results of experiments, the products of analyses, the details of operations and the effects of remedial agents; matters of fact coming within the personal knowledge of those who report them, and whose evidence therefore is all that can be required," accounts for medical men accepting without evidence and against experience statements of old age prolonged beyond the term of one hundred years. There must surely be some more solid ground for the disinclination of the faculty, in its most distinguished ranks, to pronounce for a hard and fast line which tradition disallows, and which experience, though undoubtedly in exceptional cases, is apt to relax. The difficulty of the question is indeed further illustrated by the hesitation of actuaries and insurance offices to meddle with it, although it is a curious fact, brought out most satisfactorily in the volume before us, that the sole *assured* life prolonged to beyond one hundred years is that of Mr. Jacob W. Luning, who died at Morden College, Blackheath, in 1870, at the age of 103, and who had been insured in the Equitable at the age of thirty-six.

One phase of the controversy consists in the question whether centenarians are to be looked for in the ranks of the rich and well-to-do, or rather of the poor, whose cases are less likely to attract notice. Sir George Lewis insisted upon the absence of authentic evidence of royal or even noble centenarians, and it is undeniable that the higher the social rank, the more likelihood there would be of family records and documentary evidence to check the tendency which old Fuller notes in old men of above seventy years to "set the clock of their age too fast." Actuaries, too, lay it down that the average mean duration of life is materially greater in the families of the peerage than with the general population; though, as Mr. Thoms put it, "more in number, not in proportion, of the humbler classes become centenarians," for the reason that the poor are to the rich as millions to tens of thousands. It should, however, we think, be remembered, that another point in favour of the "short and simple annals of the poor"—of course not the very poor—being likely to produce more numerous instances of longevity than the biographies of the rich, is the presumption that a calm life, without excessive brain work, luxury, and undue wear and tear of the vital forces, is favourable to length of days. The instances of centenarianism which Mr. Thoms considers to be proved most indisputably are taken from various grades—the baronetage, and the upper, middle, and lower middle classes; but we may reasonably credit all the four with a quiet tenor of existence which would naturally conduce to longevity. As to the theory that life was longer "in the good old times"—a poetic theory which Taylor, the water-poet and chronicler of old Parr's longevity, would work out *con amore*—Mr. Thoms very properly explodes it by the testimony of Sir Thomas Duffus Hardy that in the thirteenth, fourteenth, fifteenth, and sixteenth centuries, seventy years was considered a great age, and men, high or low, rarely reached the age of eighty. Good drainage, he said, would tend to increase the average term of life.

Before we proceed to examine our author's criticism of what the assertors of abnormal longevity chiefly rely upon as evidence, we may mention one point in favour of the physiological probability that human life is capable of prolongation beyond the extreme term which Mr. Thoms would allow. It is this. As Flourens puts it, "most men die of disease, very few of mere old age." The reason why the female sex contributes so many more examples of centenarianism than the male is probably the home-keeping life which women lead, their less exposure to out-of-door accidents, their habit of comparative quietude, in short. Take the two most recent biographies we can call to mind. It cannot be doubted that Dean Alford, who died in his sixty-first year, might have lived much longer had he husbanded his vital resources, and not worn himself out with mental and bodily work. And though Mr. Grote lived to the respectable old age of seventy-seven years, it is impossible not to be struck, in the perusal of his widow's interesting memoir, with the little care he took to prolong his days, and with his disregard of the dictates of prudence when exposure to the cold and active exercise were likely to aggravate his disease. It is against the grain with man to submit to the conditions which, if complied with, might greatly prolong existence, and to which his gentler mate conforms more naturally and easily. Otherwise we might have far more numerous living contradictions to the doubts about centenarianism which the late Canon Harcourt's medical man, Mr. Page, likens to "the superstition of a London cowkeeper, who said he had kept 999 cows, but that it was impossible to keep a thousand."

Not but that such doubts will be sooner set at rest if it is clearly defined what is and what is not satisfactory evidence. The five-fold list of what passes for such is as follows:—1. Baptismal certificates. 2. Tombstone inscriptions. 3. Number of descendants. 4. The centenarian's reminiscences. 5. The evidence of those who knew the centenarian as old when they themselves were young. As to the first, a baptismal certificate is not worth much without corroborative facts. In the famous case of Mary Billinge, believed to be 112 years old, its value was sadly marred by the eventual discovery that there was a confusion between Mary Billinge, daughter of William and Lidia, born and baptized in 1751, and another Mary of the same neighbourhood, daughter of Charles and Margaret Billinge, born in 1772. The Mary Billinge whose years were so many wore a mourning ring in memory of her brother William. He had been presumed to be the son of William and Lidia. Dates and registers proved him to be the son of Charles and Margaret, and thus reduced Mary's age to 91. This, however, would have been a more perfect case could the first Mary Billinge's burial certificate be shown. Moreover, in examining cases of abnormal longevity, an inquirer should get up, before searching the register, such facts as prove the supposed centenarian to be the member of the same family, and the one among two or three in it of the same name, of whom the entry is required. It may turn out that the supposed centenarian is not John Nokes *primus*, but John Nokes *tertius*, whose baptismal entry proves him to be ten or fifteen years younger than the world believes. The case of Gibbon the historian, whose brothers were all baptized by the same patronymic, in order that "uno avulso non deficeret alter," is only one of many which Mr. Thoms cites to the point. Of course a formidable check upon false statements and exaggerations of age exists in the War Office Lists, the Chelsea Hospital Records, and the Admiralty Records. We are sorry to think that there have been many veterans who have set the clock of their age hugely too fast. Jonathan Reeves, an old Chelsea pensioner, who professed to have been born in 1764, and to have fought in the American war, was proved by a search into its records to have been only 80 years of age, when he was passing for 105. By a mistaken identity Joshua Miller passed for 111 till collateral evidence proved a confusion between Thomasine and Ann, both mothers of a Joshua Miller, and wives of a Robert Miller. In the much canvassed, but finally settled, case of Thomas Geeran, which bade fair for some time to become a perfect case, the utter silence of the public records and pay-lists first shook the credit of the self-styled veteran of Seringapatam and Corunna and Waterloo. His own contradictions and explanations made matters worse. According to his own account, he enlisted in the Glasgow (or 60th) Regiment in 1796. The regiment did not get that name till 1808. He averred that he sailed with it for Madras in 1797, and fought in it at Seringapatam in 1799. But the records of the regiment prove that in 1797 it embarked from Madras for England, and that it was in Stirling in 1799. In 1801 Geeran was, according to his own account, in Egypt under Sir Denis Packe, but Sir Denis Packe was not out of Great Britain from 1800 to 1805. So much for the light which public records sometimes throw on false or incorrect statements; to which we may add that, though at first Mr. Thoms's zeal overstepped discretion when he concluded that the Army Lists and War Office Gazette had "settled the hash" of "Captain Frederick Lahrbusch," yet the eventual discovery of his name in them proved that he served, not twenty-nine years, but nine, that he never was a captain, and that he did not sell out, as he alleged, for the simple reason that he was cashiered. Before leaving the question of registers, we may note that in the case of a supposed Wiltshire patriarch the defect of the baptismal register spoiled the scent. "It is said that a former incumbent, having gone to the church to marry a couple, accompanied by a favourite greyhound, the dog was shut up in

the vestry while the ceremony was being performed, and amused himself by tearing out several leaves of the register, among them the *one* on which Baden's baptism is supposed to have been entered" (p. 130). By the way, there can be no worse method of coming at the truth about centenarianism than triumphantly referring to records and registers, unless you are sure of their existence. An indignant D.D., writing to Mr. Thoms from Shrewsbury to rebuke his shearing "Old Parr" of his traditional excess of years, concluded with the sentence, "Alberbury adjoins Loton Hall, the seat of Sir Baldwin Leighton, and I have no doubt the particulars of Parr's penance may be found in the church records, to which I refer all sceptics." Unluckily no records whatever of Parr were to be found at Alberbury. Of lying slabs and tablets Mr. Thoms cites several amusing examples; and he shows by that of Macklin the actor that it is possible the coffin-lid may contradict the tombstone. On the walls of St. Paul's, Covent Garden, Macklin is said to have numbered one hundred and seven years. When the vaults were examined on closing the graveyard, his coffin-plate gave him ten years less. Neither is the number of descendants in the third and fourth generations, whom their progenitor lives to see, worth much as an argument. Mr. Thoms gives instances and supposes cases which we might cap by what we have seen recorded of Warren Hastings's sire and grandsire, each of whom married at sixteen or seventeen. Stories like that which Clarkson in his *History of Richmond* tacks to the name of Henry Jenkins (though it is plain that he had no descendants) of an aged son, a more aged father, and a most aged grandsire, living together in the same house, or like that of the old man seen crying because his father had beaten him for throwing stones at his grandfather, are not necessarily incredible as far as the number of years is concerned.

More fallible, however, than any other kind of alleged evidence, is the recollection of the old person himself; and Mr. Thoms accumulates curious instances of the tendency of people to put early hearsay for precocious memory. Not to mention the case of George Fletcher, a soldier in youth and a preacher in ultra-centenarian age (according to his own account, which is examined in pp. 164–70), who used to interlard his sermons with personal narratives of a battle fought before he was born, or the similar case of Lord Verulam's aunt (p. 61), which is a good commentary on such reminiscences, the author collects several instances of old men's memory going back to two years and three months, two years and two months, two years, seventeen months, and, if we read Mr. Edmund Lonthall Swift's letter (p. 58) aright, to *nine* months from birth. That Cooper the Chartist remembers being well nigh drowned in the Exe at two years old, we think quite conceivable; and a friend of our own, whose parents lived at Brussels at the time of the battle of Waterloo, when he was two and a quarter years old, writes to us that a wounded officer, very badly slashed in the arm, was received after the battle into his parents' house. "I can perfectly recollect," he writes, "that for a year or so after, I used to be terrified and run away at the sight of any man with his arm in a sling, as reminding me of this officer."

That Mr. Thoms has done much in this volume to clear away worthless cases—such as those of Adjutant Peacock, who, though he was adjutant of the 88th, eighty-five years ago, and retired on half-pay in 1783, and has ceased to draw pay for many years, still has his name on the Army Lists, and like the Wandering Jew still lives to the lovers of the marvellous, and of Richard Taylor, the drummer at Culloden, and divers others; that he has dealt candidly, though still with a strong leaven of scepticism, with such cases as that of Mrs. Martha Lawrence (see pp. 206–8), where to our mind the fact is as nearly proved as possible; and that he has so sifted the truth from the mythical element in the accounts of Jenkins, Parr, and the old Countess of Desmond, that they must hereafter cease to be stock examples of longevity, will, we think, be on all hands admitted. Nevertheless, even in the three last-named cases and that of Cornaro, which Mr. Thoms ignores probably as one from beyond the seas, there may remain, after all deductions, a claim to what we have called ultra-centenarian honours; and we do not see that he has at all proved that with favourable conditions—*e.g.*, birth from healthy parents, calm tenor of life, good husbandry of vital powers, and proper care in old age—a yet larger proportion of men and women than at present may not overstep the limit of a century.

CHRONOS.*

DR. WALLACE WOOD, the author of *Chronos*, "as he sat by the seashore on a warm evening last July," unfortunately made a very foolish remark. No less unfortunately the lady who sat by him was pleased with it, and "laughed again and again," and repeated it every time they met. This remark, he says, is the seed which, "watered" by the pleasure it gave, the laughter and the repetition, "has grown to its present proportions." What the remark was shall be given in his own words:—"We had discussed daisies, the cuttle fish, the immortality of the soul, and Platonic love; you became dreamy, and I remarked: 'It is an awfully funny world.'" If the lady were to give her version of the occurrence, we should not be surprised to find that for "dreamy" we should read "sleepy," and that she laughed, not with him, but at him. The result, however, is equally unfortunate, for the present proportions of the seed, in whatever way it was watered, are 334 closely printed pages. Warm evenings in July are close upon us. People will again be sitting on "a large rock by the seashore," and talking about what they do not understand. The gentleman of the party will in all probability say something foolish in itself, but doubly foolish from the slang in which it is expressed. But here let the resemblance stop. Let the lady, remembering *Chronos* and its present proportions, look grave, say that tea must be ready, that the dew is falling, and that it is time to go home, or, if she must stay, let her tell the story of King Canute and the waves. It is not, of course, the case that every foolish expression that is uttered, laughed at, and repeated grows into a book. Dr. Wood points out that "the plant is our fellow-creature and our brother," and we may fairly expect to find the same struggle for existence in foolish expressions as in the seeds of plants. It may be the case that only one thistle seed in a million meets with the circumstances which favour its growth into that plant which is the delight of the animal that feeds on it, and that only one foolish saying in a million meets with those circumstances which favour its swelling out into a volume which is the delight of such as those for whom Dr. Wood writes. But still, just as the careful farmer cuts down the thistles before they get into flower, so every one who has any forethought or common sense takes good care at all events not to water in any way the foolish and oracular utterances of his acquaintances. Dr. Wood is so well pleased with the wit and wisdom contained in his utterance of last July, that he more than once refers to it in the course of his book. In one place, after he has told us that "feeling, religion, and poetry should be the lath, plaster, and fresco-ing of our mental edifice," he goes on "to sum up the few truths of the new philosophy." The tenth of these truths, which, in utter ignorance of the meaning of the word dilemma, he calls the horn of the dilemma, is as follows:—

> Life is a strange thing. In other words, "this is an awfully funny world;" The fact is that it is funnel or trumpet shaped; the only difficulty is to find out toward which end we are tending.

We must do Dr. Wood the justice to admit that, in spite of all his great wisdom and originality, in spite of his being the inventor of the expression "an awfully funny world," he yet modestly looks upon himself as merely a kind of hodman to the coming poet. "Three grand ages," he tells us, "have found their expressions respectively in the works of Homer, the *Divine Comedy* of Dante, and *Paradise Lost*. It is thought by many that with the advent of Steam and Electricity, Music and the Novel, a new era has dawned." He goes on to add, "As past ages have produced the epics of Paganism, Catholicism, and Protestantism, so the present age may produce the epic of Evolution. I have aimed at gathering and arranging the materials; its construction will be the work of the coming poet." It is pleasing to picture to oneself the coming poet, the man who is to rank with Homer, Dante, and Milton, sitting down with his rhyming dictionary on one side of him and Dr. Wood's *Chronos* on the other to write his great work. How many more epics would his three great predecessors have written if each poet could have afforded to keep, as a mason has his labourer to gather and arrange his materials, a kind of hodman like Dr. Wood to do all his preliminary work for him! At what a rate would composition go on if the bard found every morning awaiting him after breakfast his day's work all carefully arranged, his subject prepared, his facts looked up, his similes and his metaphors lying beside his daily paper!

But we must not allow even Dr. Wood to lead us too far into the future, though in his great work he looks further into time than the Millennium, the close of the Psychological age, and tells us of that fourth and last age of "repose, death (*Concrescentia*), the great crystallization." Why, by the way, the second age *Crescentia* should be spelt with the *c* and the fourth age *Concrescentia* without the *c* we are not told. But Dr. Wood is, as we infer from his book, a citizen of the United States, and in the United States there has been, we have often noticed, as much freedom in changing the classical tongues as in changing everything else. Out of respect to Harmodius and Aristogiton, the elder and the younger Brutus, and one or two other ardent Republicans, they think it necessary to keep up a certain familiarity with the literature of Rome and Greece; but while they would have their young men able to turn the heroes of antiquity into good account on the 4th of July, or in abusing a Lord Chief Justice, they would not have them forget their Republicanism by a slavish adherence to rules. A citizen of the United States surely has as good a right as any king to break Priscian's head, and may equally claim the title of Supragrammaticus. We find accordingly in the book before us an account of Copernicus's work *De revolutionibus Orbium cœlestium* (*sic*). *Plasma* or *Protoplasm*, we are told, means "egg-white substance," and gives rise to a new science, "Protistology, Plastidology, or Histology." Sea-weeds are *algiæ*, while "the compound stem of the zoophyte is composed of polypes (zooids, animals), living an associated life." But what are such trifling errors as these compared with the amazing statement that "we pass from Rameses to Socrates," and that "to the social beginnings of the Orient succeeds *Latin civilization*." (the italics are the author's). No wonder, he says, "an immense power lies wrapped in the expression." Immense indeed, we are ready to allow, when he thus sets forth all that is included under *Latin civilization*:—

> What volumes of poetry rise in the mind at the words, Greece, Italy, Athens, Rome, Venice, Parthenon, Pantheon, Colosseum—those fruits of the Mediterranean flower. Homer, Aristotle, Phideas (*sic*)—the *Poet*, the

* *Chronos: Mother Earth's Biography.* A Romance of the New School. By Wallace Wood, M.D. London: Trübner & Co. 1873.

Philosopher, the *Artist!* These rise upon the vision to supplant the place of the god-king, and the patriarch, with his numerous family.

Later on we find that Aristotle and Plato were philosophers of Greece and Rome, and that Socrates remarked to Cato, "Country is more than father or mother." If Dr. Wood, now that he has got hold of enough classical names to furnish him out as a Yankee orator, would study that chapter in Grote's *History of Greece* where it is shown how Socrates exposed the conceit of knowledge without the reality, he might in time perhaps become heartily ashamed of *Chronos*. Meantime, as a matter of curiosity, we should be glad if he would take occasion to inform us whether it was to the elder or the younger Cato that Socrates made his remark. The one was born, to be sure, about one hundred and forty years after the other, but happily, so far as Socrates is concerned, such a slight difference of time is altogether unimportant.

We are altogether puzzled to guess from what sources Dr. Wood derives his historical knowledge. We have seen in our time a great many silly histories, but we have never seen even a manual or a book for cramming which could have supplied him with all the ignorance of which he can boast. He is not satisfied with the ordinary "division of historic time," but divides it in the following way:—

> Thus, the two thousand years B.C. would be called the Ægyptian age; the succeeding one, the Greco-Roman. Instead of the dark ages we have the Arabian. The sixteenth century is emphatically an Italian age, for during that period this people gave a tone to all Europe; while the seventeenth and first half of the eighteenth—the age of the grand Louis and of Voltaire—is most thoroughly French. The following seventy-five years bear no less clearly the impress of the Germanic spirit. At all events, each society and each nation must stand by itself. A state of society is a flower born by its own peculiar plant, and by no means a link of a chain. Our career of "humanity," therefore, becomes instead, a Semitic, a Latin, and a Germanic career.

Why the Greek age begins after Christ, and why the Germanic career begins in 1750 and ends in 1825, is left unexplained. This new division of time is introduced and justified by the remark that, "when you contemplate successively the epics of Homer and Virgil, and then those of Dante, and Milton, and Pollock" (this rival of Dante and Milton, by the way, like Dr. Wood's *Concrewntia*, generally has his name spelt without the *c*), "you are not sailing down a stream, you are jumping from one shrub to another." Whether we are sailing or jumping we do not much care, but we must really insist, in either process, on sticking to our Dictionary of Dates. There has, we believe, been nothing to compare with this learned Doctor's statement of historical facts since the days—long ago gone by—of a celebrated hairdresser in Threadneedle Street. His advertisements used to run as follows:—"Cicero and Demosthenes were the pride of Greece. The Horatii and the Curiatii were the boast of Rome. But Macalpine gives his votaries a gloss that Greek nor Roman never knew." In chronological exactness Dr. Wood might also be likened to the guard of one of the Birmingham coaches, who, when asked about the memorial of the battle set up at Barnet, replied, as the story ran, "It is in memory of a battle fought between Guy, Earl of Warwick, and Oliver Crummle, in the time of the Romans." But the hairdresser and the guard had only history to blunder over. Dr. Wood, who is a Doctor of Medicine, has the advantage over them, for he can blunder over science also. In one place he writes that Plasm or Protoplasm is brought up from "the very bottom of the Atlantic, 2,500 feet below the surface, where the cold, and pressure, and darkness is (*sic*) greatest"; while three pages further on he says that "a pressure of three miles depth of salt water" is necessary for the production of this same substance. Perhaps in the United States, with their go-ahead theories, they study Socrates and Cato, "Phideas" and Rameses before the table of long-measure, and so Dr. Wood may imagine that three miles and 2,500 feet are the same. But what shall we say of a scientific writer who pretends to have studied Darwinism, and maintains that, "as both American and British subjects might claim Alfred and Horse as their fathers, even so the Protosaurian is as much the father of the turkey as of the crocodile"? "Pericles," as he tells us in one of his finest passages, "might have glanced with contempt at the colony of Stoics" (this is Dr. Wood's fine way of describing Rome) "on the neighbouring boot-shaped peninsula" (this is Dr. Wood's fine way of describing Italy). Perhaps, without venturing to decide where or how Pericles would have glanced, we may be allowed to assert that, however respectfully the coming poet may regard the preparations that have been made for him, all men of science and of sense will glance with contempt on such a work as this. There is this comfort to be found whenever "the knell of the universal cataclysm" sounds, about which Dr. Wood writes so much, that the flood of words will be lost in the flood of water. There will be an end of writers who string "Horace Greeley, Isaac Newton, and Socrates" together, and who tell us that "a rule that works in the digestive Archæus will work in the Psyche." There will be an end of historians who tell us that "Rome was settled by a few people—history says two—in a few thousand years their descendants covered the civilized world." Can it be the case, by the way, that Dr. Wood is somewhat confused in his mind between Romulus and Remus on the one hand and Adam and Eve on the other? It may be possible that, in anticipation of the universal cataclysm that will visit the human race, a special cataclysm has swept over Dr. Wood's mind, and thrown into utter confusion the facts which his memory retained. "The world," he tells us, "grows humbler as it grows wiser." It would seem to follow from this that any part of the world that does not grow humbler does not grow wiser. If this is true, we cannot say very much for the growth of wisdom either in the United States in general or in its citizen, Dr. Wallace Wood, in particular. At the same time, as we had not the pleasure of Dr. Wood's acquaintance in his early years, it is quite possible that he may have grown humbler. He himself says, "There is no heat, however ardent, but that it might be conceived hotter." We might likewise say there is no conceit, however offensive, but that it might be conceived more offensive. "The child," he tells us, "believes that the cradle it lies in, and the spoon that feeds it, are the fixed order of all things." If Dr. Wood in his cradle when eating his pap believed in the fixed order of all things, we can readily believe that he may have grown humbler and therefore wiser.

LIFE AND LETTERS OF PRINCIPAL FORBES.*

THE same disadvantage to which we had occasion to refer in noticing the recent Life of Humboldt is unfortunately to be encountered in the case of that of the late Principal Forbes. The tripartite distribution of the work is equally in this instance, and indeed must be from the nature of the case, fatal to the unity of effect which such a record should produce upon the reader's mind, if not to the absolute consistency and harmony which the portraiture should have in itself. It is by no means easy to admit the plea put forth in the preface to the work before us, that no one person was to be found competent to describe the various aspects of Forbes's life and work. It says little for the width or depth of the culture of the day if neither in his own half of the island nor in that to which his work, if not his personal influence, scarcely less extended, there was no single writer willing or fitted for the task. Of those who have undertaken the several aspects or portions of their friend's life it were needless to say more than that none fitter could be chosen, nor can any fault be found with the manner in which each separately has discharged his task. There was Forbes's work as a scientific investigator and discoverer, with his work as an Alpine explorer; indeed, as his biographer from a scientific point of view is entitled to call him "the father, so far as Great Britain is concerned, of Alpine adventure." There is also his professional work as an academic teacher and University reformer, added to which, lastly, there is his character as a man, and his portraiture in private life, in which respect he was no less worthy of regard than in his other and more public capacities. The account of his early life, his professoriate, and his later years—in fact, the whole biographical portion, in the stricter sense—has devolved upon his successor, as Principal of the United College in the University of St. Andrews, Professor J. C. Shairp. Chapters xiv. and xv., which treat more formally of his scientific work, with especial reference to glaciers, have been contributed by Professor Tait of Edinburgh; and chapters viii., ix., and x., containing two tours from home, 1826–1839, and particularly among the Alps, 1841–1851, are written by Mr. Adams Reilly, whose well known gifts and achievements as an Alpine traveller were the means of drawing him and Forbes together into the heartiest communion and fellowship, as the manifold letters from the one to the other amply testify. The scientific portions have had, moreover, the advantage of having been previously discussed in full and revised with care by Sir William Thomson, of Glasgow University, Professor Tait's able coadjutor in more than one of the leading scientific works of the day.

Although he had not personally known Forbes before his entrance upon office as Principal of St. Andrews, Professor Shairp's intimacy with the scenes and with many of the persons that surrounded his friend in his earlier life enables him to speak as no mere stranger could of those years which preceded their intimate acquaintance. The copious letters and journals left by Forbes himself, from which selections and extracts have been made by the unremitting and judicious labour of his widow, as well as from the vast and methodically kept correspondence of friends, have contributed a mass of interesting facts and traits of character, fully attesting to the world at large the high estimate of his worth in which James David Forbes was held in the more limited circle of personal friendship. He came of a good old Scottish line, and of parents in many ways remarkable. His father, Sir William Forbes of Pitaligo, a man of energy and ability, by his skilful management of the bank which he had founded in Parliament Square, Edinburgh, restored the fallen fortunes of his family. An intimate and valued friend of Scott's, he was forward, at severe cost to himself, in measures for the relief of the poet in his distress, in whose correspondence he is spoken of as having borne part from youth "in desperate and almost bloody affrays, rivalries, deep drinking matches"; their bond of brotherhood remained unbroken even when Forbes carried off her for whom Scott is believed to have cherished through life a deep and romantic regard, Wilhelmina Belches, sole child and heiress of a gentleman of the old stock of Invermay, afterwards Sir John Stuart of Fettercairn. Visiting St. Andrews thirty years later, Scott writes, "I remembered the name I had once carved in Runic characters beside the castle gate, and asked why it should still agitate my heart." Lady Forbes had then been long dead. A model of womanly gifts and qualities, inspiring the poet, as it has been more than hinted by Keble, with those conceptions of purity and elevation which so mark throughout Scott's types of female character, she only survived a year and a half the birth of her youngest child, James David, who was born

* *Life and Letters of James David Forbes, F.R.S., D.C.L., LL.D., late Principal of the United College in the University of St. Andrews, &c.* By John Campbell Shairp, LL.D., Peter Guthrie Tait, M.A., and A. Adams Reilly, F.R.G.S. London: Macmillan & Co. 1873.

at Edinburgh, April 20, 1809. Idolized by his father as the precious legacy of a beloved wife, cherished by his two sisters and three elder brothers as the Benjamin of the family, the bright young spirit of the boy seemed like a sunbeam in the old family seat, Colinton House, four miles from the Scottish capital. A love of nature and a turn for mechanics marked his bent of character from the first. Making miniature waterfalls, damming burns, and leaping brooks or drains hardly less formidable in proportion to his size than the glacier crevasses of his later years, were the recreations of his boyhood. The changes of the thermometer and barometer were kept ceaselessly under watch, and the almanack went by the name of "James's red brother." His father had fitted up for the boy a room with chemical apparatus, an electrical machine, and an air-pump. With James the latent taste for natural science soon became a passion, the strength of which disconcerted the family hopes for his success at the Bar. "Bring me a telescope, papa," was the child's reply, when Sir William put the question round the nursery what he should bring back from London. "Ah, Jemmy," was the reply, "you'll never make salt to your porridge." The boy had not the benefit of any school, being trained at home under the village schoolmaster and his sisters' governess until the age of sixteen, his weak health making his father nervous for him. Beyond the usual rudiments, what little of mathematics he carried to St. Andrew's College in 1825 he picked up for himself. From the age of ten he composed lectures, made mechanical models and astronomical instruments, and wrote sermons. An enthusiastic wish for the service of the English Church was set aside in deference to his father's bias for the Bar.

At college the tastes of the young physicist rapidly developed themselves. A series of contributions to Brewster's Philosophical Journal upon astronomical and other subjects, begun anonymously, before the close of his first year, was kept up for a couple of years without the faintest idea on the part of the veteran in science as to who A might be; and great therefore was his surprise at the youth of his correspondent, who, during a tour of nearly a year with his father upon the Continent, had kept up a continuous fire of notes and observations upon heat and cold, the climate of Naples, the eclipse of November 29, 1826, solar spots, the eruption of Vesuvius, &c. Sir David's enthusiastic recommendation gained for the youth the unprecedented honour of admission, while yet a minor, to the Royal Society of Edinburgh. Under Leslie, Hope, and Bell he sedulously pushed on his studies in chemistry and natural philosophy, together with Scottish law, from the pursuit of which, however, he felt himself freed by the death of his father, in October 1829. Instead of either a Cambridge career, for which his faint inclination for mathematics discouraged him, or "racing" at the Bar for a Sheriffship," he announced to his uncle, Lord Medwyn, his resolve, much against Brewster's advice, to qualify himself for a Professor's chair as the day dream of his life. A tour to the South, which brought him into intimacy with the heads of the scientific world at Cambridge, London, and Oxford, served to assign him at once a place among the brotherhood of physics. On the foundation of the British Association of Science on the model of that of Germany, he took rank amongst its foremost supporters, forming one of a powerful Scottish contingent to York in September 1831. In June the year following he was elected into the Royal Society of London. Recalled from a projected scientific tour abroad by the death of Sir John Leslie, Forbes offered himself for the Chair of Natural Philosophy thereby vacant. Though dismayed to have Brewster unexpectedly as a rival, he was induced to persevere in his candidature, which was crowned with success January 30, 1833, mainly owing to the very high testimonials of Whewell, Airy, Peacock, Buckland, Chalmers, Hamilton of Dublin, and a host of scientific names; Herschel, in particular, speaking of Forbes as "marked by nature for scientific distinction, if he should continue to aim at its attainment." How amply the youthful Professor fulfilled the anticipations of those who thus recognized his early promise may be seen not only in the grateful testimony of his numerous class of pupils, and in the high position accorded to him amongst men of science abroad and at home, but in the number and variety of his writings, a list of which is appended to his Life. Scarcely a department of physics but is touched by his untiring energy, and lighted up by his original genius. The discovery of the polarization of radiant heat, with approaches to a demonstration of the undulatory theory as equally applicable to heat with light, deserves to rank among the most splendid of recent advances in special science. Weak health, first developed in a violent attack of fever during a tour abroad shortly after his marriage in 1844, made gradual inroads upon his powers of continuous work, without lessening the elasticity or the ardour of his spirit. His letters and journals teem with proofs of his versatility of mind, and of the energy with which he combated physical weakness in the cause of truth. After having had more than once to depute to a substitute his winter's course of lectures while seeking health in a milder climate than that of North Britain, he hailed with satisfaction the comparative relief and repose of the Principalship of St. Andrews, to which he was nominated on the recommendation of the Home Secretary, Sir Cornewall Lewis, December 2, 1859, on the removal of Sir D. Brewster to the like post at the University of Edinburgh. Here Forbes's energies found scope in measures of academical reform, in retrieving the financial position of the University, and in the restoration of the fine chapel and collegiate buildings. The foundation of the College Hall, in emulation of the English system, was with the Principal a wished and successful work. Dividing his terms of residence at first with his chosen picturesque cottage, at Pitlochrie, in the Scottish Highlands, he was at length driven at more rapidly recurring intervals to Clifton, or to the South of France. Reaching Clifton with difficulty from Hyères in May 1868, he sank from exhaustion, yet with consciousness unimpaired to the close, on the last day of that year.

The special work by which Forbes made his impression upon the science of the day lay in his study of ice and glacial action. A peculiar interest was excited in scientific circles towards the close of his life by the circumstance that parts of his theory, as well as much of his claim to originality, had been challenged by more recent observers and theorists. Of his power to meet every imputation of this kind he never admitted the least misgiving, and it is the firm belief of his biographers that the papers left by him contain in themselves ample stores of fact and reasoning for the refutation of all gainsayers. The valuable papers from Forbes's pen, reprinted in the appendix, will probably satisfy all impartial judges that his theory of glacier motion was thoroughly independent of that of Rendu, even though the theory of the Savoyard bishop may, as a happy suggestion and in a crude form, have been enunciated at an earlier date. The observations of Rendu in 1838 upon the movement of masses of rock on the surface of the glacier bore no comparison with the mathematically taken measurements of Forbes in 1842 through reference to three co-ordinates by means of the theodolite. Nor is it easy on the side of Agassiz to set aside Forbes's positive assertion that it was at his suggestion, and by methods specifically indicated by him in 1841, that the measurements of Agassiz were made, it being well known that no such observations had been undertaken by the Swiss naturalist until after Forbes's visit to the glacier of the Aar. Of the value of the observations either of Agassiz or Hugi, some notion may be formed from the estimate of glacier motion having been with Hugi 244 feet per annum, and with Agassiz as much as 733 —the mean arrived at by Professor Tyndall, with whom Forbes himself is in fair agreement, being from 140 to 150 feet. Another disputed point is the first observation of the lamellar structure of glacier ice. So obvious would seem to be the vertical veining or striation which runs across all ice structure as almost to preclude the question of priority at all. That it may have struck Agassiz, as that gentleman has asserted, as early as 1838, it must be hard to disprove. Professor Forbes declares himself, however, to have had much difficulty in convincing his companion that what he termed a vertical stratification traversed the whole mass of the glacier, and was no mere superficial marking induced since his last visit. Letters from Professor Studer, Mr. Robertson of Newton, and Mr. Heath strongly support this statement of Forbes.

More open to controversy is the priority of announcement, together with the scientific value, of the plastic or viscous theory of glaciers. Immense confusion has been here introduced by the imperfection or inadequacy of the physical analogies pressed into the theory. Doubtless many observers before M. Rendu had been struck with the resemblance in certain properties between the motion of glaciers and that of other bodies more or less short of fluidity. But he was the first writer, it may be conceded, to insist upon the plasticity of ice, as shown by its moulding itself to the endlessly varying form and section of its bed, the centre of the ice stream moving faster than the sides and lower bed, impeded as these were by the friction of its rocky trough. He seems to have conceived it as a ductile plastic mass, much as Forbes saw in it a sluggish river or a lava stream, likening the Rhone glacier to a "pailful of thickish mortar spreading itself out in its bed." There is in all this, as clearly pointed out in Thomson and Tait's *Natural Philosophy*, no physical theory, or true cause in nature, but just the opening out of a phenomenon verified by his scientific observations, together with his geodetic and other measurements. Forbes's ideas, as definitely summed up in his Travels (1843), and since known as the viscous theory, were that a glacier is "an imperfect fluid or a viscous body, which is urged down slopes of a certain inclination by the mutual pressure of its parts." The single property which ice has in common with the substances cited by him—mud (homogeneous), mortar (heterogeneous), pitch (homogeneous), water (homogeneous), to which may be added honey and wax—is that of changing shape indefinitely and continuously under the action of continued stress. The property of resistance to tension possessed by all these bodies save water, and that most commonly implied in the idea of viscosity, is one in which ice is essentially the most wanting. The infinite brittleness of ice as shown by the simple fact of its cleavage by a mere needle point is, as Professor Tyndall remarks, conclusive of this question. If ice possessed one modicum of the power of stretching, crevasses could not be formed. It is to the intermediate state of *névé* that viscosity in the truest sense applies. The substance which falls in the delicate crystal of the feathery flake, crushed and squeezed together by the accumulating snowy mass, the air pressed out as its filmy particles lose their crystalline form, passes through this intermediate plastic state to its ultimate form, that of true ice, after regelation and recrystallization. A snowball goes through the self-same process. It is to Faraday's theory of regelation, coupled with James Thomson's discovery of the lowering of the freezing point by pressure, far more than to Forbes's idea of viscosity, that physicists will look in future for the true solution of glacier action and growth. There is nevertheless in the approach made by Forbes towards grappling with and solving the mystery, as well as in the experiments and observations made by him on the way, a gain to science which it were thankless now

to dispute. If he was misled in part by a somewhat imperfect analogy, he was beyond doubt the first to clear the subject from the rubbish of pre-existent fancies or dogmas, laying a basis of fact in place of one of *à priori* assumption. If not the Newton of glacial science, he must be allowed the credit claimed for him by his biographer of having been the Copernicus or the Kepler.

THE PARLIAMENT OF 1625.*

MR. GARDINER is still at work at his own special period, though, as is but natural, he is gradually getting on towards times somewhat later than those with which he first set out. He now gives us an original record of the first Parliament of Charles the First, a short-lived body, which met on June 18 and was dissolved on August 12, to say nothing of an adjournment from July 11 to August 1, followed by a translation from Westminster to Oxford. The book is a report of the debates in the Commons during that Parliament, printed from a manuscript belonging to Sir Rainald Knightley at Fawsley, to which Mr. Gardiner has added an Appendix of several other contemporary papers, among them another report of the Oxford debates. The main point of Mr. Gardiner's inquiry is to show that the famous speech which is commonly thought to have been spoken by Sir John Eliot in the debate of August 10 was, like some still more famous speeches of Cicero, never really spoken at all. It is found, though not with his own name, in Eliot's own account of the proceedings; and Mr. Gardiner's view of the matter, if we rightly understand it, is that Eliot made the speech afterwards, from notes of Sir Robert Cotton's. In Mr. Gardiner's words,

> The most probable explanation is that the speech was prepared by Cotton; that Cotton shrunk from making use of it, and that Eliot, catching it up, breathed into it the fire of his own magnificent imagination, and converted the result of the antiquary's laborious investigation into words inspired with life.

The question is more than one of mere curiosity as to the authorship of a particular speech. This Parliament, as every one knows, was dissolved by the King in order to save his favourite Buckingham from impeachment. Had Eliot a hand in this first great attack on the Duke? Mr. Gardiner thinks, on several grounds, that he had not, and that his first open opposition to Buckingham dates, not from 1625, but from 1626. Of the two reports which Mr. Gardiner now gives us that in the Appendix contains only the debates of some of the days after the adjournment to Oxford; but what it gives at all it gives more at length. In this fuller report the proceedings of August 10 are lost; in the shorter report which forms Mr. Gardiner's text Eliot does not appear as a speaker on that day. But on August 6 we find in the shorter report "Sir Jo. Eliot to take of all faults from my Lo. Admirall." In the fuller version this grows into a speech in which Eliot speaks against any further immediate grant of money, and "moveth that wee should peticion to debate these things at winter," and in which he uses language about Buckingham which quite bears out the words of the shorter report:—

> But I dare, in my conscience, cleare and vindicate that noble Lord who hath had some aspersions layd upon him; and that if there hath been any abuse in the fleete it is not his fault, for there is a commission for the furnishing of this Navy, which is nee new thing. It was graunted, or intended to be graunted, in the last Lord Admirall's time; and therefore the Commissioners, if any, faultie.

It would certainly be remarkable if, four days after this, Eliot delivered what Mr. Gardiner calls a "tremendous personal attack upon Buckingham." Still it might be so; for between the 6th and the 10th came the declaration made by Buckingham to the meeting of the Committees of both Houses on the 8th, which was reported to the House of Commons on the 9th. This declaration led to the final breach between the favourite and the Commons. In the debate of the following day the place assigned to Eliot's great speech is given to one by Sir Francis Seymour—*Seymor* it is in the book; nobody then thought of writing *Saint Maur*. Seymour's speech must have been annoying enough to the King, to Buckingham, or to any courtier. But it is Seymour's speech and not Eliot's. It was followed by a speech from the Chancellor of the Exchequer, Sir Richard Weston, and it is Seymour's speech and not Eliot's which Weston answers. This seems conclusive. Mr. Gardiner further shows, from private matters which happened between the Parliaments of 1625 and 1626, that there was no breach between Eliot and the Court in that interval. In Mr. Gardiner's words,

> He came to the front of the battle far more slowly than Philips and Seymour. But he did not show himself any the less earnest in the cause for that.

Mr. Gardiner, in his Preface, discusses at length the history of this Parliament in both parts of its Session at Westminster and at Oxford. He does not acquit either King or Parliament of blame, but he holds that the Commons had good ground for refusing the further grant after Buckingham's speech. He holds that Charles and Buckingham were thoroughly in earnest about the war for the Palatinate. But his general view of the Oxford Session comes to this:—

> The summons of the Houses to meet at Oxford was a resource which from the first had hardly a chance of being successful. What the Commons wanted was evidently to refuse the King's demands without showing disrespect to his person. And now that the full extent of those demands were known, they were unavoidably led to question the soundness of advice under which he had acted, and to assail the minister by whom the advice had been given. Charles too made his proposal in a form most likely to arouse the gravest suspicion. Retaining all the scaffolding of the Continental war, he contented himself with asking for a mere 40,000*l.* to finish the preparation of the fleet. He made no sign of any intention to relinquish his pledges to Mansfeld and the King of Denmark. But neither did he make any sign of pressing upon the Commons the necessity of enabling him to fulfil his pledges. Such a position was altogether untenable. He must want more than he asked for, unless he had abandoned his designs. That he was acting without proper counsel was the obvious inference.

When we read through these debates, many things, both great and small, strike us. They are mostly points which are obvious enough in the general history of the time, but they come more and more home to us whenever we read any part of its history in detail. It is very hard to get over the shock which we cannot help feeling at the contrast between the liberal and constitutional principles of the patriotic party in political matters and the religious intolerance which breathes in almost every speech. It jars upon our notion of things when we find Sir Robert Philips—nobody then seems to have taken any pains to spell him *Phelips*—on August 5th, in a great speech in four parts, in which he complains that the Protestant cause was not going on so well as could be wished in what was to prove a Thirty Years' War, winds up with a practical piece of advice, that "the best way to secure ourself is to suppress the Papists here." No doubt something tending to a suppression of Papists is just now going on both in Germany and in Switzerland; but we suppose that most Englishmen are inclined to look on with somewhat of amazement, and to wonder that other nations have not found out that there is no policy so bad as that of making martyrs. But the whole mind of the age was religious, and not only religious but theological. The first business which the House undertook after requesting the King, among other things, "for the restraint of priests and Jesuits by proclamation," was to bring in a Bill "for preventing abuses upon the *Sabaoth*"—the seeming confusion between *Sabbath* and *Saboath* was no bad punishment for talking about *Sabbath* at all—and we hear more about fasts, communions, sermons, and the prosecution of the great matter of Montague's book than either about grievances at home or about the recovery of the Palatinate. The thing comes to its height when, at the Oxford meeting on August the 2nd,

> Sir Robart More argued the question at large, touchinge the fallibility of grace accordinge to the distinction of the schooles of the antecedent and consequent will of God.

After which it sounds more practical when we get even such a fragmentary report of a speech of Sir John Eliot's as this:—

> Not to send for a man that by intendment should be in custody, but to comand the Sergeant to bringe him forth at his perill.

Whole days are taken up at Westminster with Montague's business and with articles concerning religion, which means for the most part the persecuting of Papists. It is, however, a certain relief to find the House looking forward to a Bill for the restraint of non-residences, pluralities, and commendams, and to another Bill for the increase of benefices out of the fruits of the spoil made upon them, first by the monks, and then by Henry the Eighth:—

> To the end that learned ministers able to instruct the people may be planted over all the realme in the severall Parishes therof, which cannot bee without raysinge the livinge to a convenient proportion, it is desired that the House be pleased to take the same into speciall consideracion, and (if they think fit) to pray a conferrence with the Lords for the better effectinge therof, and that a Bill be drawen to enable everye man that is owner of an impropriation by deed enrolled to make the same presentative, or to charge it with an annuitye for the mayntenance of the minister, and that the Bill against simony bee speedely proceeded with.

All this, however, is distinctly the spirit of the age, and it is not confined to any particular country or party. When all Europe was divided by a religious war, and when it was held everywhere and by all parties that whoever dissented from the established religion was necessarily disaffected to the State, it could hardly be expected that the House should shrink from what we now call Ecclesiastical Wednesdays, or rather from spreading its Ecclesiastical Wednesdays over the greater part of a Session. And perhaps this religious turn of the House is really only a part of the general character of Parliamentary matters in those days, which in some points forms the greatest contrast to the way of doing things in our own time. It is plain that Parliamentary debates were of a graver and more sober kind than they often are now. Nobody went into the House to crack jokes or to cut capers. The whole thing is solemn and serious, even to the extent of being sometimes formal and pedantic. The speeches, both of legal and other members, are crowded with legal and historical precedents, many of them going many centuries back, for there was then no date like the glorious Revolution which men could seize upon to draw a definite line at. Sir Robert Philips on the 10th of August quotes a great number of examples of what our ancestors had done in like cases; he enlarges on the safety of keeping to precedents, and with good reason in days when he could say with truth, "We are the last monarchy in Christendom that retain our original rights and constitution." Precedents are not without their weight now, but they are commonly precedents not so far back as when Philips referred to the days "when the Black Prince took the French King." He, however, laid himself open to the answer of Sir Humphrey May:—

> Let no men despise ancient president[s]; no man adore them. Examples are powerfull arguments, if they be proper, but tyme[s] alter; every Parliament must be wise with his owne wisdome: hee valewes more a dram of wisdome fit for the present, than a mountaine of wisdom that was fitted for 500 yeares past.

Another point is that in those days Parliaments neither met so regularly, nor, when they met, sat so long as they do now. Par-

* *Debates of the House of Commons in 1625.* Edited by Samuel Rawson Gardiner. Printed for the Camden Society. 1873.

Rament met for business and for business only. Its time of meeting had nothing to do with any London season, nor could any one have spoken of the House of Commons as an agreeable club. Then again, when there were no newspapers and no reporters save such as we deal with in this volume, there could be very little temptation to speaking to Bunkum. We doubt whether there is anything to be called a joke in the whole collection, and very little can be meant for any purpose except really to appeal to the reason of the House. There are indeed some fine strokes of sarcasm, as might be expected in the seventeenth century, and now and then a little quaintness. As when Sir Edward Coke argues:—

By the statute of 4 Henry 4 noe man ought to begg any thinge of the Crowne till the King bee out of debt; this statute is called Braynewn, which is Welch for a white crowe; they were like a crowe, ever cravenge, and for theire fuenes they are white. In the tyme of want and dearth (as now it is) costly apparell, diet, and lady vanitye is to bee abandoned.

Besides the reports of debates, the Appendix contains several letters addressed to Sir Dudley Carlton in the year 1626, and a draft of the same year in the handwriting of a clerk of Secretary Conway, called a Narrative of the Course of Public Affairs in England, which almost rises to be a narrative of the state of public affairs in Europe. And, lastly, we have Pym's report of the same year about Montague's books. With all reverence for Pym, we cannot help being glad that the House of Commons no longer concerns itself whether the Pope is Antichrist and whether the Church of Rome is a true Church or not.

PRUSSIAN OFFICIAL HISTORY OF THE WAR OF 1866.*

THE War Office, through its energetic Topographical Section, has lately offered to English readers the means of reading in their own language all that the Prussian General Staff has told the world of the great military problem of 1866. The solution of this problem involves that search for the true causes of the wonderful and unexpected success of Prussia which was the last work that occupied the ever active mind of General Jomini at the close of his long life. The veteran of military criticism who brought to bear on the study as much acuteness as the approach of the ninetieth year ever left the human mind, rejected absolutely the theory, which at first was popular enough, of the victory being decided by the superior education of the conquerors. Even their special training as marksmen seemed to him very properly no sufficient cause for the success of the Prussians at Koeniggratz, where, as he forcibly put it, twenty thousand of the best shots from the Tyrol would have helped the Austrians little when they left their centre open and unguarded. In short, though provided with but very inferior means of information, since he wrote very soon after the close of hostilities, Jomini unhesitatingly ascribed the advantage gained by Prussia to the combination of a superior organization, wielded by superior strategy, and carried out with superior weapons, rather than to any one of these three advantages individually. And although he wrote thus six years since, time has done little, whilst enlarging the materials for judgment, but confirm the accuracy of this general view. Countless works have shown how splendid the arrangements were which enabled the Prussians to collect eight-ninths of their army, as soon as mobilized, ready for the march into Bohemia. The Austrian Official History has explained how backward were the counter-preparations, how hurried the march into the decisive theatre of hostility in Bohemia, and how ill supplied with means were the Imperial forces in that kingdom for the strategic object of defence. The same honestly written narrative explains, with a clearness which no Prussian writer can outdo, how Benedek and his staff were perplexed and outmanœuvred by the double attack upon their front, and how order followed by counter-order spread confusion through their scattered corps, and left the generals to be caught unsupported one by one, and so beaten in detail by their more enterprising foes. Lastly, all histories worth the name, notably Captain Hozier's own *Seven Weeks' War*, do full justice to the fatal effect of the breechloader on the Austrian *morale* in the first encounters. If it be not strictly true, as some critics have alleged, that this effect was so terrible that no strategy could have possibly saved Benedek from ruin, inasmuch as his troops were sure to be crushed at the points of collision, it is at least true that the single victory of the Austrians at Trautenau was only won at so terrible a sacrifice as to leave Gablenz's corps hardly in a state to follow up its fleeting triumph. None of these causes of success can, therefore, be properly overlooked. Nor can any of them be fully weighed without reading carefully what the best trained and best organised staff in the world has to tell us of the deeds of the chiefs whom it serves, and of the army which it guides, as well as of the springs of the great operations in which they at their first essay made such marvellous use of their powers.

But we are not now about to follow the translators seriatim through their task. It would be undesirable at this date to review the course of the war in detail, inasmuch as the original work of the Prussian staff has been long before the public, and the outlines of the strategy, as well as the chief events of the actions, have been largely studied from this and from other sources and are generally known. There are some interesting criticisms however made by the Prussian writer, which have been hitherto little noticed, on that imperfect conduct of the operations on the other side which gave Von Moltke so much advantage for his combinations. And it is in speaking of these that we find it our duty to comment on what seems an obvious want in the present volume—its failure to supplement the original by the many later sources of information available for the use of the translators. It is true we have before us an official version of an official work; but there could surely have been no objection to making such additions by way of note as would not have interfered with the sense of the original, whilst they would have enabled the English reader to know where it needed addition or correction. Moreover, the Prussian history is severely brief in some parts, and the point of the writer is in such places apt to escape those who are not so learned as he in the technicalities of the subject. The strategic comments of the opening portion contain notable examples of this in their criticisms of the mistakes made by Moltke's opponents.

Chief among those errors lies that which led the Austrians to concentrate so far from the Bohemian frontier as Olmütz. This has been declared, we are told, by Austrian writers to have "held Prussia in doubt, and compelled her to divide her forces." It had, as the Prussian author shows, just the opposite effect; for when it was known that the enemy were not collecting in Bohemia at all, all the first natural fear vanished of a sudden advance from the projecting angle of that kingdom northward on Berlin, such as might well have suggested itself to so bold a leader as Benedek. The Austrians were plainly either going to take altogether a defensive line, or they were preparing to invade Southern Silesia, the nearest portion of the Prussian territory to them. As Moltke had resolved to use the five lines of railroad open to him whereby to attack Bohemia, one wing of his forces—the Second Army, in fact, under the Crown Prince—would naturally move from the Silesian side: and if Silesia were invaded first, this would be sufficient for the moment to check any rapid advance of even the whole of Benedek's army. "Every doubt vanished," as the translators justly render the terse expression of the original, which, however, hardly explains itself to the general reader. "An invasion of Prussian territory could not be directed against Silesia. Corresponding measures were taken, and no care was hereafter requisite for the security of Berlin."

Few as the words are, they remind us forcibly of the vast change of opinion as to Prussian military power which has come about in a short seven years not only among outsiders, but among Prussians themselves. We have vivid recollections of a certain number of *Kladderadatsch* much gazed at by peaceful citizens in the days of which we speak, wherein the immediate consequences of the unnecessary and dangerous hostilities into which "the man of blood and iron" was hurrying an unfortunate nation were portrayed in a cartoon representing the plunder of the Northern capital by the ferocious and invincible cavalry from the plains of the Danube. Alas for the prophecies of political caricaturists! He of *Kladderadatsch* was not more correct in his forecast than poor Leech when he, about the same time, threw ridicule on the first mention of the Alabama Claims as a mere piece of Yankee impudence, laughable, but not seriously to be thought of in any shape. Only the Berliner who still keeps his back numbers may look over them with more pleasant feelings than we can possibly nowadays entertain, if we recall, by a similar process, our delusions as to what lay before us in our dealings with America.

Another point which concerns the opening strategy of the campaign, and is here treated so briefly as is hardly consistent with clearness, is the change of plan which turned the Saxons from operating with the Bavarians on the flank of the Prussian invasion of Bohemia. It would have been well, as before observed, if the translators had aided the reader at such points as those. If we read the Berlin historian aright, he thinks that this combination might have seriously threatened Moltke's communications, since the Prussians could not afford to leave troops enough behind to hold Saxony against it. But the fact is that the Bavarians were not only rather unwilling to go so far from their own country, and leave it open to the enemy's enterprise, but they were altogether too behindhand for any such daring combination. In fact, they now paid the penalty of their inferior peace organization, for they were only able to move at all, and that with a much smaller force than had been estimated, when the Hanoverians who had counted on their aid were disarmed on the one side, and the Prussians had poured into Bohemia on the other. Hence the change of the first bold design, and their subsequent isolation, whilst the Saxons were not only unable to attempt to hold or recover their little kingdom, but became a mere unit in the hurried and disorderly combinations with which Benedek in vain strove to ward off Moltke's well-aimed and decisive attack.

Whilst we are on this subject of the opening strategy, it is well to add that another point which might with advantage have been more brought to light is the preponderating effect that a superior railroad system gave to the Prussian design. It is true that the Berlin writer notices this very briefly, in order to say that it counteracted the "important advantage Austria had gained in preparation." But the translators had the Austrian official narrative available, and it could not have been beside their work to show that this supposed advantage never really existed at all. Or, if this were omitted in deference to Prussian authority, a note—and notes have not been altogether avoided—would have been well bestowed in making clear to the lay reader the extraordinary disadvantage which was entailed on the Austrians in the defence of Bohemia by the fact that they had provided but a single railroad to Prague from Vienna, and that carried so

* *The Campaign of 1866 in Germany.* Compiled by the Department of Military History of the Prussian Staff. Translated by Colonel von Wright and Captain E. M. Hozier for the War Office.

near to the frontier as to be hardly available with safety. Never perhaps, in the case of so warlike a Power as Austria, with so natural, so certain an enemy to contend with, has there been such a striking instance of the want of proper forethought. It damaged her chances from the very first; for, on account of this deficiency, a point of concentration near Vienna had to be chosen, and the defence of Bohemia left until it was attacked; whereupon Benedek's army was hurried up to the scene, and brought into action by detachments without full preparation or even proper time to develop its front in its new position. This defective supply of railroads, in fact, weighted Austria from the very first, as Prussia's splendid system gave her chiefs the means ready to hand of selecting and carrying out the most decisive and brilliant strategy that could be devised.

If the military details of the history which Colonel Wright and Captain Hozier have done service by translating needed some such elucidation as these instances seem to show, the political portion at the opening cannot by any such aid be made of value. A staff officer writing in the War Office of a great and victorious military Power about the causes which first forced his country to take up arms must excuse us if we do not follow him in his historical views. The time has not yet come when any member of his profession could afford to state the simple truth that the whole of the Schleswig-Holstein complication, with the quarrel with Austria which grew out of it, was merely a drama of puppets in which the master-hand of Bismarck was never off the strings. No doubt nothing in such a case succeeds like success; and the success of the great Minister has converted the most unwilling of the former opponents of his daring policy. Yet the fact remains that in his own land, before victory popularized the War of 1866, its real author was both openly named and openly condemned by the mass of his countrymen, who had measured with less certain eye than his the forces that were coming into conflict, and dreaded the results as possibly the ruin of themselves and their kingdom. In truth, the English reader may well skip all that portion of the book which treats of Austrian conduct, as of no more value than the estimate of a Ministerial measure by a steady Opposition journal. The great facts remain in any case, that the collision had been coming on for a century or more, and that all that man could do was to retard or hasten it. Bismarck thought the time favourable to Prussian chances, and he therefore chose to do the latter, and thus to solve the long vexed question of the supremacy of Germany.

As we part from our translators we must add that their work, except it be in the too close adherence to a now old text, is ably and fairly done. There are some minor slips, however, which are less excusable in scholars of standing than in the newspaper writers who occasionally would almost seem to have been followed instead of corrected. We notice especially that the misleading title of "Feldzeugmeister" which vexed the souls of so many Special Correspondents during the war, still cleaves to Benedek, although the translators should surely be aware that it is the mere equivalent of our "full" general, and should be so rendered. The Austrian *Feldmarschall Lieutenant* is but a lieutenant-general, and should not appear in a translation worthy of the name as "lieutenant field-marshal." Nor are such decided Germanicisms as the "Commanding General of the Corps" at all desirable additions to our military nomenclature, whilst they here and there give a needless stiffness to what is on the whole a faithful and spirited version of a very valuable work. The new War Office volume, though certainly not perfect, should find a place in every library in which military men have an interest. We may add that the admirable atlas of plans which accompanies it, taken from that prepared by the Prussian Engineers for their own government, is of itself a temptation to every student of the war to possess himself of this masterly history of it.

ROBERT ORD'S ATONEMENT.*

IF *Robert Ord's Atonement* had been stronger in tone and less sickly sweet in handling, it would have been a noteworthy book. It has a good central idea which might have been wrought into a striking plot; but, though not wanting in a tender kind of pre-Raffaellite beauty, it is spoilt by its overflowing sentimentalism, and by a certain silliness of treatment irresistibly suggestive of a boarding-school young Miss in her teens. The book is of the kind which thinks to make women interesting by describing how they slide their little hands into the bigger palms of men, not their brothers or husbands, when they want to coax and soften them, as women with self-respect never do; how their rosy lips quiver or pout, dimple into smiles or "come down at the corners like a child's" when they are distressed or delighted—and they always are being distressed or delighted in a bubbling, unresting way fatiguing even to read of; how their big eyes fill up with tears upon small provocation or no provocation at all, self-control being a virtue not much cultivated in these romantic regions; how they sob themselves to sleep over their miseries, with the infallible result of swollen noses and puffy eyelids, which, however, are results never catalogued; and how they accept all that happens to them in a frail, tottering infantile way that shall ensure men's compassion and attention, and that is for the most part met by a strong arm wound round a slender waist, a golden head nestled into a broad chest, a vocabulary of tender epithets, and more kissing than careful mothers would deem wholesome for their daughters. That is, it is of the kind which has no more to do with common sense than it has with algebra, and which describes a society made up of beings as little like the everyday men and women of Great Britain and Ireland as the fairies of Mr. Gilbert's *Wicked World* are like the girls of the period in the real one.

That a crabbed old woman should resent the surly pride of an ill-tempered nephew, and cancel the will which had made him her heir in favour of a lady companion, all honey and butter, is by no means an impossible proceeding. Crabbed old women have done such things before now and will again; and Rotha Maturin is not the first lady companion who has played cuckoo, voluntarily or involuntarily, in a family nest. That the dispossessed family should feel generally aggrieved and be disposed to resent their wrongs on the cuckoo is natural; and that the designated heir, who had been waiting for his inheritance to marry, and who now finds himself deprived of both money and wife, should feel himself specially defrauded, and with greater wrongs to resent than any one else, is also natural. We will concede, too, that the lady companion who, by the terms of the will, is forced to live at the very gates of the angry family, should do all in her power to repair the injustice of her benefactress, and to conciliate her wrathful neighbours. But that a man fond of calling himself perpetually a gentleman should have proved himself such a boor as Robert Ord, and that a woman should have met his brutality with such unwearied patience as did Rotha Maturin—that the one should have been so ruffianly, the other so saintly—is as much beyond the limits of ordinary good-breeding on the one side as of ordinary human nature on the other. This excess of Griselda-like virtue, coupled with a certain cloying sweetness of impersonation, renders Rotha one of the most wearisome, if estimable, young women we have met with in that unreal world of fiction where everything gets its representative but nature.

The story is told chiefly in conversations founded on insignificant events. The plot indeed is as slender as a hair, and the very simplicity of material employed renders the book both confusing and soporific. When the interest has to be kept awake by nothing more exciting than an elaborate description of a country tea party given by one of the dispossessed to the cuckoo as *his* atonement, or a day's shopping when the heiress plays the part of a good fairy and buys clothes for the vicar's family, the reader may be forgiven if he skips half the talk and goes to sleep over the other half. And yet, in spite of its silliness and dulness of treatment, the book has the merit of an idea which ought to have been strong enough to ensure success. Rotha Maturin would have been a real heroine had she been a woman made of flesh and blood, and not merely an alabaster Madonna or wax-work saint. A stronger and as sweet a natured woman would also, like herself, have done her best to make friends with the angry family, and to lighten their disappointment in every way possible to her. But she would have had a little more fibre and mental dignity in her method than Rotha shows. She would not have been so like a large kitten in her manners; not so fond of sitting on the floor at folks' feet, nor have been so often taken into people's arms as if she had been a baby or a doll. She would not have been always creeping here, or drawing herself up there, with a self-consciousness that never sleeps; she would not have cried so often, have kissed so much, or have made such ceaseless play with her eyes and lips; she would have won esteem by the quiet dignity and native force of her character, and she would not have coaxed herself into forgiveness and belief so much as she would have earned respect, and through respect the "atonement" which came at last. As it is, if anything could have justified the Ord family in their enmity, founded on their very natural suspicion that the lady companion had been an *intrigante*, and had got round the old termagant for her own purposes, it would have been the seraphic superhumanity of the reluctant heiress when she comes into possession, the pains she takes to prove that she could not have manœuvred for a legacy of which she does not make half the personal use she might, and her last naive confession that she is saving all for *him*—him being Robert Ord, her bitter and unforgiving enemy.

The Ord family themselves are well drawn; but, just as the conversations remind us, at a great distance, of Mr. Trollope, so do the men who play such an important part in Rotha Maturin's life bring to us a far-off and subdued echo of Mr. Henry Kingsley. Fortunately for the author of this book the echo is both far-off and subdued, but it is there. The heavy-shouldered, ponderous vicar, with his small stipend and growing boys, a trifle stupid in worldly wisdom, if good and hard working and properly "high," is a figure that has vitality, and can be realized. Garton is perhaps less vivid, because more complex in intention. The queer shambling "half boy, half monk," who had no ambition but to become a priest and his brother's curate, living in a cottage with "Rube"—who is a village boy afflicted with a drunken father, and Garton's special pet and favourite—and lame Johnnie Forbes, who is another village boy, scarcely prepares one for the passionate lover into which he is transformed by the power of Rotha's charms—and offer. For Rotha, to carry out the line of child-likeness on which she is constructed, will not let Garton go away from Bryn when he has the chance, but says, "Don't go, Garton; I want you," and so keeps him for a brief season as her affianced lover. And, by way of showing young ladies with money how they can persuade young gentlemen without to take the manage-

* *Robert Ord's Atonement.* A Novel. By the Author of "Barbara Heathcote's Trial," "Woe Wilfe," &c. 3 vols. London: Tinsley Brothers. 1873.

ment of it, and of themselves, we will extract the scene; it may be useful:—

"Why should you go?" faltered Rotha. How pale her face was!

"Hush, you must not tempt me; how can you, knowing what you know now. Of course I must go away; how can I bear to live on here, and see you every day, and know," and his voice trembled, "and know you are not for me." He paused, and then went on, "You must not be sorry now I have told you this. I could not help it. I could not indeed. God bless you, dear, for your noble thought, as I shall bid God bless you in my prayers when I am far away."

The little hand trembled out to him again from the folds of the grey dress; there were tears in the bright kind eyes; the sweet face was covered with blushes.

"Don't go, Garton; I want you." And then in a voice of intense feeling, "I was a poor girl, without a friend but Meg in the world, till all these good things came to me; but what are they worth—what is anything worth—unless I may share them with those I love?"

Could he mistake those brave tender words? The strong man trembled like a child when he heard them.

"Rotha, do you mean me?" he whispered; and Rotha, looking up with a smile and a blush said, "Yes."

Unfortunately, however, Rotha's good intentions are defeated, and she does not marry Garton after all; but, when they have "passed over two graves" to get to each other, her old unbelieving enemy Robert. Robert is the most hazy of the three brothers. One would not know whether he is intended to be a fine fellow with a bad temper, or a bad fellow with the potentiality of good, unless we were instructed by the author; but we find that we are to accept him as the former, though he certainly has a vile temper, and forgets, not only his gentlehood, but his manliness more than once. However, he makes all due atonement at the end by loving the pretty cuckoo with almost more passion than his youngest brother had shown. It was a mercy in disguise, all things considered, that his aunt made the will she did. By it he was prevented from marrying Belle; and Belle in consequence conveniently dies, when he gets Rotha. He did not love poor Belle; they did not suit each other; and her temper was in its own way as bad as his. His gradual love for Rotha under the guise of hate is well described, so far as it is described at all; but it might have been made of more interest. This gradual growth of feeling is an excellent instrument in the hands of an author, and always fascinates a reader, because affording room for speculation as to how it will turn out, and what it all means. But we scarcely like the transfer of Rotha's affections so decidedly. Her love for Garton was too passionate in its grief when she hears that he has gone down with the vessel, for her to have been able to have loved Robert as she does; even after five years. The only consolation we have is that she could not have loved Garton so much as the author says. She might have liked him as her brother, and been fond of his society, and have missed him when he went, and have felt all that vague affectionateness which is half instinct and half propinquity; but she would have had misgivings, and in her passion she would have had discretion. As it is, the affair is managed with needless and somewhat uncomfortable complication; and we cannot help feeling that Rotha's innocence has a look of paint somehow, and that she is on the whole too much like a shepherdess after Watteau.

The author has committed the great mistake of opening the nursery door too often. We are overcrowded with boys, and little Arty especially is a nuisance. So indeed is "Rube," the Jonathan to Garton's David, round whose ragged shoulders the vicar's brother is always laying his arm; and so are all the young Ords whenever they appear, which is much too often. Of Meg or Mrs. Carruthers we have very little in proportion to the promise; but enough as it turns out. For, though she is begun with a firm touch enough, the portrait fades off into the prevailing indistinctness of over-sweetness; and the woman who first appeared before us as almost rugged with strength and self-control ends with being as hysterical and fond of gush as the rest. We would earnestly counsel the author of *Robert Ord's Atonement* to be on her guard against her sentimental tendencies. A certain amount of sentiment refines a story, but too much weakens it; and to have to bear company to such a weeping, emotional, kissing, and blushing set of people as those of this book for three long volumes is trying, to say the least of it. Also we would suggest that "to chatter nineteen to the dozen" is not an elegant mode of saying that a girl talks too much; and that Rotha is not charming when she says that she'd "as lief take a bull by the horns" as ask Robert Ord to let her take Belle to Ventnor. And will the author tell us what special pathos or passion she sees in the reduplication of the name in conversation? and why, when Robert and Rotha are half-wrangling together, "Robert—Robert Ord," and "Rotha—Rotha Maturin" should be considered more effective than "Mr. Ord" and "Miss Maturin," which would have been the natural style of address?

NOTICE.

We beg leave to state that we decline to return rejected communications; and to this rule we can make no exception.

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 920, JUNE 14, 1873:

The Spanish Anarchy.
Mr. Forster and the Education Act. French Finance.
The Scotch Churches. The Government of Combat. The Judicature Bill.
Lord Russell on the Government of Ireland. Mr. Harcourt's Motion.
Canadian Progress.

The Shah's Visit. The Dangers of the Money Market.
Old Catholics and Ultramontanes in Germany. The Science of Advertising.
Mr. Lowe and the Zanzibar Mail Contract. The Destruction of Alexandra Palace.
Orientals at Vienna. *Diane de Lys.*
The Grand Prix and Ascot.

Life of George Grote.
Todhunter's Conflict of Studies. Dorothy, Countess of Sunderland.
Thoms's Human Longevity. Chronos. Life and Letters of Principal Forbes.
The Parliament of 1625. Prussian Official History of the War of 1866.
Robert Ord's Atonement.

CONTENTS OF No. 919, JUNE 7, 1873:

Parliament from Easter to Whitsuntide—The Shah on his Travels—Ministerial Prospects in France—The Trade-Unionists in Hyde Park—The Prussian Ecclesiastical Laws—Spain—The Decline of Bunkum—Lord Derby at Preston—The Judicature Bill.

The Jesuits—Arctic Discovery—The Persian Visit—The Priesthood in Southern Italy—Fish—A Manual of Dress—Complicated Complication—The Royal Academy—The Oaks.

The Duke of Wellington and the Catholic Question—Davies's Theology and Morality—A Garibaldian Novel—Letters of John Shillingford—The Great Dutch Admirals—Unorthodox London—Discipline in Foreign Armies—Pope's Iliad in Longs and Shorts—The Death Shot—French Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS.
THIS DAY and NEXT WEEK.
Saturday (June 14). Special Opera, "Il Trovatore," at 3; Out-door Sports Rounds, at 6.
Tuesday. Great National Dog Show; Opera, at 3.
Wednesday.—Dog Show.
Thursday. Dog Show; Opera, at 3.
Friday.—Last Day of Dog Show.
Saturday.—Fifth Grand Summer Concert, "Acis and Galatea," at 3.
The Fine Art Courts and Collections, including the Picture Gallery (the Works on Sale), the Technological and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park always open. Music and Fountains daily.
Admission to the Palace, Monday to Friday, 1s.; Saturdays, 2s.; or by Ticket purchased before the day, 2s 6d; or by Guinea Season Ticket.

CRYSTAL PALACE.—The NATIONAL DOG SHOW, organized by the Kennel Club, Tuesday, June 17, till Friday, June 20.—Admission to the Show on the First day to witness the Judging, from Twelve till Three, 5s.; after Three, 2s. 6d. Other days, 1s. Season Ticket holders each day, 1s. Admission to the Palace, 1s; or by Guinea Season Ticket.

CRYSTAL PALACE.—The GREAT NATIONAL ROSE SHOW, Saturday, June 28. FÊTE of the GERMAN GYMNASTIC SOCIETY takes place same day. Admission, 5s.; or by Ticket purchased before the day, 2s. 6d.; or by Guinea Season Ticket.

MUSICAL UNION.—JAELL and AUER, expressly from Paris and St. Petersburg, next Tuesday, will play Rubinstein's Grand Sonata, Op. 19, for Piano and Violin; Quartet, C Minor, Beethoven; and Quintet in C, Schubert; and Solos included in Programme. J. ELLA, 9 Victoria Square.

DRAMATIC READING, with Musical Illustrations, in AID of the SAILORS' HOME, Holyhead. Queen's Concert Rooms, Hanover Square, Saturday Evening, June 21, at Half-past Eight o'clock, Mrs. STIRLING will read (for the first time) Thomas Brigstocke's Historical Play, "Eustace de St. Pierre," with the Author's Incidental Music, performed by the following eminent Artists:—Miss Edith Wynne, Mr. Lewis Thomas, Mr. John Thomas (Harpist to Her Majesty the Queen), and a Select Choir.—Reserved Seats, 10s. 6d.; Unreserved, 5s. and 2s. 6d. Tickets may be obtained of Lamborn Cock, 63 New Bond Street; Stanley Lucas, Weber & Co., 84 New Bond Street; usual Agents; and at the Hanover Square Rooms.

THE SOCIETY of PAINTERS in WATER-COLOURS.—The SIXTY-NINTH ANNUAL EXHIBITION is now OPEN, 5 Pall Mall East, from Nine till Seven.—Admittance, 1s. Catalogue, 6d.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neophyte," "Andromeda," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six.—Admission, 1s.

ELIJAH WALTON.—EXHIBITION, including "A Storm on the Sea" and "A Sand Storm in the Desert," and many new and important Drawings, Alpine and Eastern, NOW OPEN at Burlington Gallery, 191 Piccadilly. Ten to Six.—Admission, with Catalogue, 1s.

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE,
22 Albemarle Street, London, W.
The next ANNUAL GENERAL MEETING will be held at BRADFORD, commencing on Wednesday, September 17.
President Elect.—J. PRESCOTT JOULE, D.C.L., LL.D., F.R.S.
NOTICE to CONTRIBUTORS of MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organizing Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and that he should send it, together with the original Memoir, by book-post, on or before September 1, addressed thus: "Dr. ——, General Committee, British Association, 22 Albemarle Street, London, W." For Section..... If it should be inconvenient to the Author that his Paper should be read on any particular day, he is requested to send information thereof to the Secretaries in a separate note.
Information about local arrangements may be obtained by application to the Local Secretaries, Bradford.
G. GRIFFITHS, M.A., *Assistant General Secretary, Harrow.*

CHRISTIAN EVIDENCE SOCIETY.—EVIDENTIAL DISCOURSES at ST. GEORGE'S HALL, Langham Place. On Monday Evening next, June 16, an ADDRESS will be given by the Rev. SAMUEL GARRATT, M.A., Vicar of St. Margaret's, Ipswich. Subject: "Objections to Revealed Religion an Evidence of its Truth." The Chair will be taken at Eight P.M. by ROBERT BAXTER, Esq., Advocate. The Subsequent Discourses as follows: June 23, Rev. J. BALDWIN BROWN, B.A., "The Policies of Times"; June 30, Rev. WILLIAM SANDAY, M.A., "Literary Criticism and Christian Belief"; July 7, Lord Bishop of GLOUCESTER and BRISTOL, "The Present Aspect of Christian Evidences."
7 Duke Street, Adelphi, W.C., June 1873. F. BARKER, M.A., *Secretary.*

THE VISIT OF THE SHAH.

THE long-expected SHAH has come, and the successor of DARIUS is quartered in the palace of Queen VICTORIA. Everything that labour, ingenuity, and expenditure could do has been done to give him a reception of the handsomest kind. He came over from Brussels with a brilliant naval escort, he was welcomed at Dover and Charing Cross by enthusiastic multitudes, and the Royal Family has exerted itself to the utmost in worthily representing the nation of which the SHAH is the guest. Now that he is come he is to be shown everything we have to show him, and every moment of his time is to be occupied. He is to see ironclads and troops, operas and banks, docks and balls, and as much in the way of pleasure or business as London can show him, while the princely hospitality of the Duke of SUTHERLAND is to afford him an opportunity of visiting the chief seats of manufacturing industry in the country. Princes, like other people, have turns of ill or good luck, and it must be owned that the SHAH has had a piece of exceptional good fortune. He happens to come at a time when there is nothing and no one else to think of, when a capital steeped in wealth is burning for any sort of unusual amusement, and when there is no cause, political or financial, or in the circumstances of the Royal Family, to check the general thirst for some special sort of entertainment. Consequently the SHAH seems as if he were now the one object of human interest. To see him is bliss, to stand behind the umbrellas of a crowd near which he will pass is at least something. Fashion decides that the SHAH must be made much of in every way, and fashion in England rules supreme. In any case the Shah of PERSIA was sure to be received properly, and every one is glad that there should be no shabbiness or neglect in his reception; but it is perhaps somewhat accidental that there should be all this fervour and fuss about him. No one can grudge him the advantage. He has come a long way to us, and civilized life no doubt subjects him to many irksome restraints. If he is rewarded by more enthusiasm being excited about him than could have been reasonably expected, if he figures as a very big lion instead of a moderate-sized lion, and if a people whose pockets are bursting and whose heart is sad with ennui has gone what has been termed "SHAH-mad," we can only congratulate him on his good fortune, and those who welcome him on having a Shah to go mad about.

But in England we never allow that we amuse ourselves for amusement's sake. We set before ourselves other objects, and are glad to give matters a moral or political turn. If the SHAH takes the trouble to read the different exponents of English opinion, he cannot fail to be aware that, while we show him our most splendid sights, we desire, in the first place, to instruct him, and, in the second place, to convince him that England is the real ally whose friendship is worth having. He seems quite ready to fall in with our humour; he has had the courtesy to state that to see the rest of the world was much to him, but that to see England was more than all the rest. He overcame his dislike of punctuality in our favour, and was ready to begin his trip to London at four o'clock in the morning. He is making the heroic sacrifice of dropping for the moment his Oriental habits, which in a place so comparatively unimportant to him as Berlin he saw no reason for foregoing; and when he landed at Dover he was ready, through Sir HENRY RAWLINSON, with a speech to the municipal authorities, which must have recalled to many readers the inimitable scene of the interpreter in *Eothen*. Of course it is all very hard work for him, and it is difficult not to sympathize with a bailiff of Dundee, who, when it was proposed that the Town Council should do something for the SHAH, and that he should have the freedom of the city given him, and the Provost should go up to London in his full robes, stated that he wished to ask the Provost whether he did not think that all this might possibly bore the SHAH. Of course the SHAH is bored, and there must be moments when he heartily longs that he had followed the example of his predecessors, and remained in the quiet Eastern countries to which he was accustomed, where life flows on so easily, and where at any moment he can order a hookah or an execution. But then he is being instructed. He is every day taught some new lesson about England, how well we make guns and ironclads and railways, how excellent is our system of government, and how quiet and orderly are our crowds under the rule of half-a-dozen policemen. The finest sight, we are daily assured, that a foreigner can see is a million honest English faces lighted up with the delight of looking at him. The SHAH will reflect on the spectacle, he will ponder over it, and will try to estimate how much must have gone before in order to make possible the gathering of so vast, comfortable, and well-behaved an assemblage. At any rate, if he does not think of this, but silently asks himself whose dog is he that he should wear himself out with moral and intellectual calculation, we have done our best for him. We have given him the opportunity, and that is all we could do. Nor is it only that he is at least put in the way of thus educating himself. He can now measure what it would be to have England for a friend or an enemy in war. There is a general feeling that we ought to seize on this golden occasion of securing an ally on comparatively easy terms. We want the SHAH to be our man in the East, to turn a deaf ear to the blandishments of Russia, to baffle all the intrigues of our various Oriental enemies, and to bar firmly the passage of an intending invader of India through his dominions. Now is the time to make an impression on him. He will see our ironclads, our military manœuvres, our Bank of England, our thickly populated cities, our hives of industry, and thus he will know what England really is, and will think twice before he fails to place himself at the disposal of so pugnacious, so powerful, and so rich a country. Peshawur will thus be guarded at Guildhall, and we shall have done an excellent stroke of business by the keen pursuit of pleasure.

But the SHAH also has come here with an eye to business. He has been pleased to farm out his whole country to Baron DE REUTER, who is to form a series of companies in London with the object of changing the entire state of things in Persia, and giving it railways, canals, mines in working, a flourishing commerce, and, generally speaking, peace, plenty, and civilization. The SHAH certainly has not done the thing by halves. Baron DE REUTER and those claiming under him are to make any railways in Persia they please, and for seventy years no one else is to be allowed to make any. With the exception of mines of gold, silver, and precious stones, this great contractor is to be allowed to work all Government mines on paying 15 per cent. of the profit to the State. He may require the owners of private mines to hand them over to him unless they have worked those mines within five years. If he discovers a mine, he is to pay nothing for it but the mere price of the surface. Forests and canals are handed over to him on very similar terms. The Government guarantees him six millions sterling to help him in his various enterprises, and for twenty-five years he is to receive all the Customs dues of the kingdom, giving the SHAH a progressive bonus on his present revenue. No one else is to be allowed to execute any works for the material improvement of the country, or to set up any bank or credit establishment, until Baron DE REUTER has had the opportunity of considering whether he would like to oust the projector and take up the scheme for himself. And lastly, the SHAH undertakes to provide the necessary labour

at current prices; and the history of the Suez Canal shows how valuable this stipulation is if censorious people do not interfere. At present Persia is one of the poorest, most backward, and most thinly populated countries in the world. But it is to be transformed wholesale, and Baron de Reuter, with the aid of London Companies, has undertaken to transform it. The visit of the Shah is obviously the best advertisement which this gigantic scheme could have. It will make him and his country familiar names in every English household. His jewels, his magnificence, and the enormous trouble and expense involved in the reception accorded him, will seem so many pledges of the magnificent prospects of his country, and it will be hard if his coming here does not at least serve the purpose which was supposed, in the great days of Limited Companies, to be served by the introduction of the well-known nobleman into the list of directors in a prospectus. This is quite fair. Business is business, but it is not all business. As a grave matter of business the British investor would have to consider many things. He would have to ask himself where all these railways could go, and how they could possibly pay with only a sparse population in a desert and mountainous country to keep them alive, how the necessary labour was to be procured unless a considerable amount of force was used to obtain it, and how long a foreigner could keep many of the main resources of the State in his hands without political agitation being excited. The splendid history of the East India Company has been cited as an encouraging parallel, but no parallel could be more unfortunate. For, in the first place, there is all the difference in the world between the chances of easy gains in poor, sterile, uninhabited Persia, and in rich, fertile, and densely populated India; and, in the next place, the East India Company, in order to secure itself, had to seize on as much of India as it could get, and rule it on its own account; and this is not a very pleasant memory to recall to the minds of either Persians or Englishmen. But, on the other hand, the future has infinite possibilities. Population may spring up, as by magic, on the lines of railway; crowds of willing labourers may come forward; the Persians may like foreigners collecting their Customs dues, and having the preference over them in every industrial enterprise. This is the bright side of the scheme, and it is the one on which the Shah naturally looks; and if by coming here and showing himself, and enabling us to realize the fact of his existence, he can teach us also to look on it, he may have done good work, and may return home with the happy conviction that, if he suffered much while in England, he suffered for the good of his country.

LOCAL TAXATION.

Mr. STANSFELD has probably learned for the first time during the recent debates the difficulty of readjusting taxation, whether it is local or general. Sir G. Jenkinson, who revived the obsolete proposal of taxing personal property, was not a formidable antagonist. The House was apparently not greatly impressed by the case of a wealthy ironmaster who, receiving many thousands a year from property in the funds, paid rates, like his neighbours, only on the premises which he occupied. As the National Debt has no local habitation, it would not seem at first sight that a particular parish has any exclusive claim on a fundholder who may happen to live within its boundaries. A landowner in Berkshire, who made his fortune in Wales, and invested a part of it in Consols, would confer an unmerited and gratuitous boon on the place of his residence if he paid rates to the Union or the parish on the whole of his income. If the recipient of 1,000*l.* a year, secured by mortgage on land in Yorkshire, happened to occupy a villa in Kent, there seems to be no reason why land in one county should bear the burden of local expenditure at the other end of the kingdom. The mortgagor of the Yorkshire estate would have had to pay a higher rate of interest for the loan if the mortgagee had been rateable on his income, and consequently the Yorkshire land would have been charged both with the local rates and with the rates of the parish in Kent. The old theory, which was never applied in practice, of rating visible stock-in-trade was intelligible and plausible. In simpler times the great majority of parishioners made their money where they spent it; and their collective possessions constituted the property of the parish. The practical objections to a local Income-tax would be conclusive if they were not altogether superfluous. Rates ought to be imposed not on the reservoirs of wealth, but as far as possible on its sources. The owner of millions owes a proportional contribution not to the parish fund, but to the national treasury. The returns of property within the parish boundary are the proper subject of local taxation. As might have been expected, Sir George Jenkinson had not taken the trouble to work out his theory in detail; and the members of his party, with many complimentary expressions, unanimously entreated him to withdraw an inconvenient motion. It is evident that if the House had entertained the project of rating personal property, the arguments for a State contribution in aid of the rates would have been weakened or destroyed. Sir Massey Lopes has contrived to furnish the Government with a pretext for imposing additional burdens on land; but he hopes in some degree to repair the mischief which he has done by transferring a portion of local burdens to the Imperial revenue. Sir G. Jenkinson, with still greater simplicity, demands an extension of the area of local taxation which would inevitably lead to a large increase of the total charge. Mr. Gladstone and Mr. Stansfeld are fortunate in the blindness of opponents who constantly play into their hands. Landowners who have within the last ten years thought it possible to reduce the taxation on land must, to say the least, be extremely sanguine.

The discussion of the various methods of bringing growing timber within the area of taxation disclosed the embarrassing nature of a question which had probably in the first instance seemed simple and easy. The difficulties which arise from artificial complications of tenure may properly be disregarded. It is not because life-tenants have limited estates that the property which is distributed between themselves and their successors ought to be relieved from its due share of public burdens, and a competent actuary could probably devise an equitable method of dividing the charge between a life-tenant and a reversioner. On the other hand it must be remembered that a prudent owner in fee-simple would abstain for perhaps the whole of his term of possession from cutting immature timber; and a rate assessed on the deferred value of the property would not be easily calculated. Mr. Stansfeld ultimately accepted a proposal which seems approximately just. No other crop except saleable underwood is at present rated; and in every other case the assessment is founded on the estimated value of the land. Over the greater part of the country, and especially in hill districts, which have in modern times been most extensively planted, the least valuable land has been appropriated to the growth of wood. Steep ravines and hill-sides, of which an acre would scarcely depasture a mountain sheep, will often grow tolerably good larch or even oak. It is fair, if any change is to be made, that the land which has hitherto escaped from taxation should be rated according to its capabilities of producing profit. The liability of saleable underwoods imposed by the Act of Elizabeth seems to have been an accidental anomaly. The proposal that the whole matter should be relegated to the discretion of the Assessment Commissioners was highly objectionable. The Bill will for the first time introduce a conflict of interests between owners and occupiers; and the tenant-farmers control the Board of Guardians which appoint the Assessment Commissioners. As long as the rates were chargeable on the tenants, there was no reason why the justices and the elected Guardians should not act together harmoniously on all questions of assessment; but woods are almost universally retained in the hands of the owner, and the tenant-farmers will be anxious to strain every point against the landowners. Representative bodies are never to be trusted with the care of any interest which is protected only by a permanent minority. It is highly probable that the Assessment Commissioners will, under the provisions of the Bill, place too high a charge on woodlands; and they might have been still more strongly tempted to commit injustice if no rule had been prescribed for their guidance. Some members objected to any plan for rating woods, on the ground that by discouraging the process of planting the rate might ultimately diminish the rainfall, and injuriously affect the general climate. There is reason to suppose that both on the Continent of Europe and in India some effect of the kind has followed from the denudation of mountains; but the facts and the natural laws are but imperfectly understood, and the extent of English woods which might be cleared to escape a rate must be within a moderate compass. Long before the time of rates, when a great part of the island was covered by forests, the climate is not supposed to have been more genial than at the present day. It is creditable to the landowners that they offered no invidious opposition to a new tax on their estates. For this and heavier burdens which may hereafter be imposed on their property they owe a debt of gratitude to Sir Massey Lopes. In this and in other cases the large proprietors will suffer no ultimate loss, because the rate on their woodlands

will operate in relief of the charge on the rest of their property; and from time to time they will be able, if they think fit, to increase their rents in proportion. Smaller proprietors who have less control over their tenants will seldom be able to shift the incidence of the rate.

There is great risk of unfairness in the assessment of game, though in principle the extension of the rate is perfectly reasonable. It has often been pointed out that an occupying farmer who pays an additional rent for the right of sporting is already subject to the rate; but where the game is reserved by the landlord, or where it is separately let to a shooting tenant, the rate is only levied on the farm rent. It is perfectly right that an owner who makes a profit by his game should indirectly pay a rate, especially as there is a presumption that the farm rent has been proportionally reduced; but where, in consequence of reliance on his moderation in preserving, the full value of the land is paid as rent by the tenant, it is unjust that the owner should be taxed on the amount for which the right of shooting might be let to a stranger. Few persons rent shooting except with the intention of preserving strictly; and the rent which might be paid would be calculated, not on the number of pheasants and hares actually on the land, but on the head of game which it might be made to bear. The non-preserving owner might therefore be charged at the same time on a full rack rent and on an imaginary game rent which he could only obtain by making a deduction from the rent of his farms. In this case, even more than in the taxation of woodlands, all the bias of the Assessment Commissioners would be against the landlord; and it would not be for the public interest if he were induced to recoup himself for the additional charge by letting his shooting to a preserving stranger. The true rule of assessment is the value of the land let with the shooting, however the actual tenancy might be combined or divided. The case of fisheries is simpler, because the water is not let, like certain lands, to two different tenants at the same time. Perhaps the most serious injustice which could be perpetrated by a rating Bill would be the imposition of an excessive charge on mansion houses, which, as a general rule, are not lucrative possessions. A man who is overhoused already suffers serious inconvenience, and in many parts of the country he would find it impossible to let his house at a rent proportionate to its size. It is well known that in sales of estates beyond a certain acreage the house is commonly thrown into the bargain. The wise men who live in houses built by fools ought not to be punished by an excessive tax. The difficult question of metal-bearing mines was settled, at least for the time, with little discussion. The withdrawal of the exemption of scientific and literary societies follows almost necessarily upon the surrender of the exemption of Government property, and in the latter case provision has been made for arbitration in the event of a disagreement between the Treasury and the Assessment Commissioners. Mr. CAWLEY's sweeping amendment for the exemption of all machinery, except that by which motive power is generated or transmitted, is naturally supported by the manufacturing interest, and may perhaps give some trouble to the Government.

M. RANC AND THE ASSEMBLY.

THE French Assembly has given leave to the Governor of Paris to prosecute M. RANC for alleged participation in the acts of the Commune. The report of the Committee which recommended that this should be done sets out the charges against him with more moderation than could have been expected. That M. RANC was a member of the Commune is admitted; that the Commune was an insurrectionary Government, arming the citizens against the legal Government, is admitted; and it is on these uncontroverted facts that the Committee ground their recommendation. The public interest demands, they say, that justice should be equal for all, and that after thousands of the rank and file of an insurrection have been severely punished, the leaders should not be allowed to escape. It is true that the military authorities have remained inactive for two years, but this does not affect the fact that they are inactive no longer. The Assembly is not concerned with the cause of their silence; it has only to inquire whether there is a *primâ facie* cause for their speaking as they now speak.

As regards the policy of the resolution taken by the Assembly two questions may be asked—Is it wise now? and would it have been wise at any time? The first question may be best answered by assuming that there has been a miscarriage of justice up to this time, owing to the unwillingness of M. THIERS to offend the Radicals. From this premiss the Right infer that it is the business of the Assembly, now that M. THIERS has been taken out of the way, to help General LADMIRAULT in discharging the duty which only M. THIERS's intervention prevented him from discharging in the autumn of 1871. In a matter of this kind, they say, the Assembly knows nothing of policy; its one desire is to render equal justice to all. M. RANC was a member of the Commune, therefore he must submit to the same treatment as other members of the Commune. The plea that the Assembly ought not to consider the policy of a step which cannot be taken without its consent may at once be dismissed. If the mere fact that M. RANC is charged with an offence against the penal code makes it a thing of course that the Assembly shall allow him to be brought to trial, what becomes of the inviolability which attaches to the person of a deputy? It is because there may be reasons why a member of the Legislature should not be prosecuted, though he may be technically liable to prosecution, that the option of allowing or forbidding proceedings to be taken against him has been given to the Assembly. It is impossible, therefore, not to take the policy of the prosecution into account, and from this point of view there is, we think, an overpowering weight of argument against it. The continuity which necessarily exists between successive Executives makes the acts of one Administration morally binding on its successors. The prosecution of M. RANC was not omitted by an oversight. On the 20th of September, 1871, M. RAOUL DUVAL raised the question in the Chamber, and the Assembly supported the Government in its determination to leave M. RANC alone. Even if it be granted that this determination was mistaken, and that the Assembly was made an accomplice in it by the unworthy arts of M. THIERS, M. RANC may fairly plead that such a course was equivalent to an admission that the evidence then before the public was not enough to sustain a prosecution. The reasons which warrant the exemption of an accused person from being twice tried for the same offence hold equally good against his being once tried after the Executive has decided not to indict him, and its decision has been challenged and sustained. The change in M. RANC's position since his prosecution was last under discussion is a further reason against going on with it. He has just been returned to the National Assembly by an enormous majority as member for Lyons. The very fact that his election is distasteful to the dominant party in the Assembly ought, if that party had any wisdom, to have secured him against the present attack. The readiness of the Assembly to untie General LADMIRAULT's hands will be regarded as showing a determination to retaliate upon the Lyons Radicals in the person of their representative. It will be said that, if M. RANC had not been elected, he would have been left unmolested, and that it is his popularity which has made his prosecution a certainty. It is natural, perhaps, that the Government of Combat should seize the first occasion that offers itself of justifying its self-chosen title. But imprudence does not cease to be imprudence because there is a strong temptation to commit it. It is pleasant no doubt to tell the electors of Lyons that the representative they have chosen to send to Versailles is no better than a criminal who has hitherto succeeded in evading justice. But the Government would have done better to remember that the partisans of the Commune are not likely to be disheartened by the discovery that the great majority of the people of Lyons think that association with it confers a claim to their confidence. It may be said that the mere fact of M. RANC's return would have taught them this, but it will be brought home to them with much greater vividness by the appearance of the deputy for Lyons in the dock. M. RANC's connexion with the Commune might have been forgotten if the new Government had not chosen to revive the recollection of it. No responsibility could have attached to the Duke of BROGLIE or his colleagues for any undue supineness in the matter, since they could honestly have pleaded that the policy of prosecuting M. RANC had been considered by their predecessors, and that, whatever their opinion of that policy might be, it was now too late to raise the question again.

By the side of the rashness which has led the Government to undertake this prosecution now, the rashness involved in undertaking it at any time may seem a small matter. We are convinced, however, that on this point M. THIERS showed more prudence than ordinarily characterized his policy towards the Communists. M. RANC's connexion with the Commune lasted but a short time; he was not involved in any of its most guilty acts; and his withdrawal gives colour to his own statement that his object in uniting himself with

it was to effect a reconciliation with the Government. It is an open question, to say the least, whether a good citizen finding himself elected almost unanimously to represent his arrondissement in the Commune ought not to have acted much as M. Ranc acted. The conflict with the army of Versailles had not then begun, and it was still possible that by timely submission on the part of the Parisians it might be altogether averted. M. Ranc believed that he had influence with the insurgents, and he maintains that he took the only course which offered any chance of making this influence felt in the direction of peace. The fact that he continued a member of the Commune for little more than a week, and gave in his resignation as soon as the deaths of Duval and Flourens convinced him that the contest had become inevitable, is consistent with the truth of his declaration. There were only two motives that could lead a man to become a member of the Commune—the wish to prevent it from going to extremities, and the wish to urge it to extremities. M. Ranc's election on the 26th of March might be explained on either hypothesis; his resignation on the 5th of April seems only compatible with the latter. It is quite possible that it is the moderation to which M. Ranc lays claim that constitutes his worst crime in the eyes of the new Government. Their object is to include all their opponents in one common condemnation. They do not wish to give any countenance to the notion that the guilt of the members of the Commune depended on their acts in that capacity; they prefer to assume that it consisted in serving in that capacity at all. It is the usual policy of extreme parties to treat those who are not with them as though they were against them. In France this policy has been pushed to greater lengths than in most other countries, and there is a special reason for adopting it at the present moment. The main chance which the majority in the Assembly have of commanding a majority in the country lies in the confounding together of all subordinate distinctions among their opponents. If they could once get it recognized that every man who votes with the Left is an enemy to public and social order, to the security of property, and to the sanctities of family life, they would have gone a long way towards controlling the elections even without the aid of M. Beulé. If it is expedient that no fine distinctions should be drawn between Radicals and Republicans, still more is it expedient that none should be drawn between extreme Communists and moderate Communists. To allow M. Ranc's motives to shield him from prosecution would be to imply that men of opposite political opinions may live harmoniously together under a Government which commands the assent, if not the enthusiasm, of all alike. The wish of the Right is that men of opposite opinions to their own should be forced to live quietly under a Government which commands the enthusiasm of the stronger party, and the detestation of the weaker. If they do not gain their end by prosecuting M. Ranc, they will at least make it unmistakably evident what that end is.

THE STATE PURCHASE OF RAILWAYS.

Lord Derby, at a late meeting of the Society of Arts opposed with his usual good sense the scheme of a State purchase of railways. Having in the House of Commons acquired much experience as a Chairman of Committees on Private Bills, Lord Derby had the advantage, rarely possessed by railway theorists, of knowing something of the subject which he discussed. He was a member of the Joint Committee on the Amalgamation Bills of last year, which extended its inquiries into all parts of the railway system, and he concurred with the Report in which the Committee declined to consider the remote contingency of purchase. The author of the paper which was the immediate subject of discussion included among the grievances inflicted by Railway Companies the supposed inequality of their charges to some districts as compared with others. No better illustration could be furnished of the inconvenience of public and official management. The varieties of rates which are imposed result exclusively from commercial reasons, which obviously ought to regulate the comparative cost of conveyance between different places. The quantity and character of the traffic, the existence of sea-carriage between the same terminal points, and many other conditions of the trade are considered by railway managers, and, although they are necessarily liable to mistakes, the interests of the Companies on the whole correspond with approximate accuracy to the public wants. The number of separate rates charged by the Companies in the United Kingdom cannot be less than twelve millions; and every item has been fixed on deliberate calculation. A Government Board would aim, both on its own account and under external pressure, at an impracticable uniformity of charge. The Joint Committee of last year, after full investigation, rejected all schemes for an artificial adjustment or equalization of rates, as unnecessary and unjust. The complexity of great commercial undertakings scarcely admits of relief by legislative or administrative interference. Equal mileage rates, or rates fixed in proportion to outlay of capital, would offer insuperable impediments to the elasticity which is essential to all the arrangements of trade; yet the worst fixed rate which could be adopted would be preferable to the exercise of Parliamentary interference. Competing markets, competing coal-fields, and competing manufacturing districts are much safer in the hands of rival Railway Companies than in the hands of political parties.

The smallest of the objections to the scheme of purchase is the financial difficulty. It would not be necessary to provide any capital for the debenture debt and the preference dividends; and the value of the ordinary stock, including a premium, would scarcely exceed 300,000,000*l.* As the whole capital of all descriptions now yields a return of more than four per cent., the Treasury would probably suffer no immediate loss; and if the prosperity of the country continues to increase, the transaction might eventually be rather profitable than burdensome; yet Lord Derby is right in calling attention to the possible alternative of a decline in the receipts, and to the consequent necessity of covering a deficiency by taxation. Railway proprietors are speculators in a promising commercial adventure; but the State ought to abstain from speculation, because it involves a possibility of loss. A far more mischievous consequence of the proposed transfer would be the termination of the constant and rapid process of improvement. New branches, new stations, accelerated trains, would be seldom or never attainable when a State Railway Department was bent on producing a safe and satisfactory budget. If the Government had taken over the railways five-and-twenty years ago, the mileage would not by this time have reached half its actual amount, and probably the speed of trains would scarcely have been increased. During that time the service of goods trains in France has not been in the smallest degree improved; and consequently the transit of goods is there three or four times slower than in England. One of the great English Companies has within six years spent 14,000,000*l.* of capital, and increased its gross annual receipts by 2,000,000*l.* It is absurd to suppose that the Government would have expended so large a sum on a thousand or twelve hundred miles of railway, even if its officers had thought that the investment would be highly profitable. Before the risk could be incurred, it would have been necessary to obtain a certainty of success which could only result from experience, and it would have been also proper to compare the demands and the prospects of all the other districts which might require increased accommodation. As a general rule, a Railway Board would determine that all new lines competing with existing railways were undesirable. The Board of Trade, in Lord Dalhousie's time, condemned the project of the Great Northern Railway, and assuredly no Government would have constructed the highly profitable line of the Midland, from Bedford to London.

It would be an error to suppose that the popular opinion which would be reflected in Parliament, and consequently in the public offices, is favourable to efficient railway administration. For some years after the disasters of 1866, journalists with few exceptions protested loudly against the construction of additional railways, and an idle clamour for closing capital accounts overpowered the protests of competent authorities. In a great majority of cases, Directors and managers were wiser and more provident than their shareholders, and yet the proprietaries, under the influence of their legitimate advisers, resisted to a great extent the noisy fallacies of volunteers and amateurs. Instead of closing their capital accounts, the principal Companies have in the interval spent forty or fifty millions in extensions and improvements, to the great increase of their own revenues, and with still greater advantage to the community. The opposite policy would have been certainly adopted by a public Board, with the full sanction of the House of Commons, and the general approval of the newspapers. Until lately it would have been thought a self-evident truism that the hope of profit was the only sufficient motive for the successful conduct of a commercial undertaking. Only communistic theorists have imagined a society which should submit to its governing body the whole conduct of sales and exchanges, or of other

modes of distribution. It is not thought that the Admiralty could be beneficially entrusted with the management of the commercial marine, or the Board of Trade with the direction of the iron trade or the cotton manufacture. The State, as trustee for the consumers and also for the producers, would find its duties strangely complicated between the attempts to secure commercial profits and the provision of cheap commodities. The promoters of the comparatively modest scheme of purchasing the Irish Railways have never been able to make up their minds whether they should describe the property as a good investment, or the acquisition of the lines as an opportunity for reducing rates and taxes for the benefit of passengers and freighters.

The rejection of the Bill for the amalgamation of the London and North-Western with the Lancashire and Yorkshire offers a discouragement to the advocates of State purchase. The Joint Committee seems to have been satisfied that the economy which might perhaps have resulted from unity of management furnished no adequate equivalent for the inconvenience of a monopoly extending over a large and important district. If the great Companies had been allowed to form lateral amalgamations, their condition would have approximated to that of public and privileged bodies; and it is probable that sooner or later they would have been superseded by the State. It is absurd to suppose that the traffic could be conducted with equal efficiency, and at the same time more cheaply, if the railway managers and their subordinates were responsible to the State department rather than to their respective Boards. The same men would do the same work; and although the stimulus of competition would be withdrawn, their traditions would sustain the character of the service during the present generation. Their successors would be trained up under a system of routine; and the professional ambition which has prompted innumerable improvements would become less directly operative. The policy of railways would no longer be guided by the impulses which actuate great manufacturers and enterprising merchants. It is also worth while to remember that the State means the Parliament, and that the House of Commons is a fluctuating body. Ten or twenty years hence the progress of democracy may have entirely changed the character of the House, and all administrative and economical conditions may have become largely modified. It is true that property in railways might be endangered, even in private hands, by the prevalence of novel theories; but the possibility of a deterioration in the character of the governing body may be considered as an argument against the extension of official functions. Unless strong reasons for the change can be adduced, the mere disturbance of investments by a compulsory purchase ought not to be wantonly effected. The capital of the ordinary railway stock belongs to owners who are not satisfied with a low fixed income; and therefore it would be diverted into other employments if an annuity or a capital sum were substituted for a dividend. It is not the duty of Parliament to provide investments, but it is a hardship to force capital into new employments.

THE NEIGHBOURS OF FRANCE.

ALTHOUGH the days are gone by when France affected to give the law to Europe, and when French opinions and French taste ruled a large part of the modern world, yet it is impossible that the countries most nearly in contact with France should not be affected by, and interested in, the varied events of French history, or that France herself should not in return be influenced by what is being thought and done in the countries most nearly bordering on her. The *Times* has lately published a curious account of the conversation of one of its Correspondents with a leading member of the present Ministry; and the frankness which this official personage displayed and invited furnished a striking proof of the respect entertained by at least a portion of French society for English opinion. The Orleanists have moulded their political creed in a great measure on an English basis, and to imitate English Parliamentary government has been their peculiar mission. They, above all persons, are therefore naturally anxious to be thought well of here, and to give the best possible colouring to the movement by which they have, at the cost of so many glaring aberrations from their principles, obtained a share of power. But the important point to notice is that, although an anxiety about English opinion is principally manifested by the Orleanists, yet it is shared in some strange way by all parties. The French naturally feel profoundly mortified at the censure passed in England on their conduct in provoking a war with Germany, and they are anxious [illegible] what is said and thought of them on this side of the Channel. How they know what English opinion is with regard to France is mysterious enough, for they very seldom read English newspapers or books, and the kind of Englishmen who go to Paris and enjoy themselves there are the worst representatives of English opinion possible, as it is their simple creed that it is the main duty of Frenchmen to keep Paris quiet and gay, and that the French, being fit for nothing else, ought to have no higher aspirations. Still, somehow or other, English opinion filters into France, and produces results, slight perhaps, but nevertheless incontestable. On such an occasion as the *Coup d'état* of 1851 English opinion is as powerless as every other description of moral influence. When a man has made up his mind to shoot down the necessary number of his fellow-countrymen in order that the rest may submit quietly to his dictation, he is not likely to be deterred from carrying out what he has begun by leading articles in foreign journals. The Commune, again, and the Assembly at Versailles in its moments of excitement, never troubled their heads about English or any other opinions, except perhaps the opinions of German military men. But in quieter times, when something like order is being preserved, and men cannot help asking themselves whether the course they are pursuing is one likely to lead to permanent prosperity and security, the judgment of England, far more than that of any other nation, gains in a manner which cannot be traced or explained a hold over the minds of the rulers of France. So keenly have the members of the present Government felt the stings of English criticism that a report was started that the entrance of the *Times* into France was to be forbidden; and although any serious intention to take so foolish a step was immediately repudiated by the Government, yet the report could hardly have been set on foot unless the annoyance felt in high quarters had been very great. The judgment of England may sometimes be wrong, and the adulation poured on the EMPEROR by a large number of Englishmen in the latter days of his reign may have been one of the causes that blinded him to his real position. We cannot say that ours is the still small voice of wisdom to which the French in their better moments give heed. Still, on the whole, English opinion as to France is independent and sensible, and based on better information than any other foreign opinion to which the French can listen, and it seems evident that it does affect France, although no one can pretend to say to what extent or in what precise mode this happens.

England in return feels the effect of what is going on in France. The literature of France has indeed lately lost much of its hold on England, partly because there is a natural tendency to disbelieve the conclusions at which unsuccessful people arrive, and partly because this literature itself has lost its force and spring, and is in a state of temporary decadence. But the political history of France never ceases to interest Englishmen. No one can doubt that the excesses and detestable outrages of the Communists powerfully aided domestic causes to diminish the prestige and influence of the GLADSTONE Government. If this was what liberty came to, many timid or thoughtful Englishmen said, it would perhaps be better to put a little check on our own ardent efforts in that direction. People began to dislike change, and looked with dread on a Ministry that was always meditating some new and startling innovation. The triumph of English public opinion, stimulated by the contemplation of France, has been complete in this direction, and the bold innovating Government of Mr. GLADSTONE has now become one of the meekest and most do-nothing Administrations of modern times. The distance between the present House of Commons when debating the clauses of the two great Irish Bills, and its attitude this week, when it spent the whole business part of a day in vainly endeavouring to decide how woodlands should be rated, is beyond the power of words to express. On Wednesday it was seriously proposed to interrupt the whole business of the country because some one whispered that the Snipe had come. The languor of the most languid Vestry could scarcely go further than this. Nor is it only the Commune that has contributed to produce this growth of English Conservatism. Englishmen think that France is in a state of perpetual confusion, and that this confusion is due to the perverse mode in which all French parties act. The chief impression produced on the average Englishman by the long telegrams he reads from Paris is that of thankfulness that he does not live in France. Had M. THIERS succeeded in consolidating the Republic, and got together a sensible and moderate Assembly supporting a straightforward and modest Ministry, Englishmen would pro-

bably have come round to the conclusion that liberty had not done so very much harm in France after all. But the counter revolution got up by a coalition of men with the most discordant aims and beliefs has reawakened the suspicion that France can never go straight, and that the use of France is, like that of the drunken Helot, to show virtuous foreigners what to avoid. It is by no means impossible that if the dissolution in England is delayed till next year, events in France may exercise an appreciable influence on its results. Nothing could be more unfortunate for Liberal candidates in England than any sudden change of things in France which should bring the extreme section of Radical politicians into power, and, so far, the intrigue by which M. THIERS was ousted from power may prove to be of service to the supporters of Mr. GLADSTONE. On the other hand, if during the next twelve months the French Conservatives abuse their power, and are guilty of glaring acts of tyranny, or copy the worst acts of the old Imperial Government, the effect may be to produce a reaction in England and to awaken a sympathy for French Liberals which will aid the Liberal party here. But if nothing particular happens in France, if the Conservatives just manage to live on and do some good things like recurring to Free-trade, and some bad things like bullying editors and prefects, the probable effect on English parties will be favourable to the Conservatives here; for they represent those feelings of Englishmen which prompt them to believe that Frenchmen are always making mistakes, and that the best way to avoid their errors is to stick to all that we call specially our own.

France and Germany are at present too deeply and avowedly hostile for either to attend much to what the other chooses to think or say. The pressure of the occupation is still acutely felt, and Frenchmen dare not give expression to any criticism which might offend those who still are quartered as conquerors on French soil. In Germany French politics are regarded with unblushing frankness only from the point of view of German interests. German critics express themselves as rather pleased than otherwise at the advent of the new French Government to power, because they choose to see in it a guarantee that there will be continued in France the system of preserving a Republic without Republicanism, which they, perhaps rightly, consider to be the system most likely to keep France perpetually weak, as it has neither the strength of concentrated authority nor the support of popular enthusiasm. The fear of France being led into the championship of the Papacy has determined all the recent policy of Germany and Italy; and nothing could have been more unfortunate for the Papacy than that two of the neighbours of France should have been roused, by the apprehension of French interference, to strong and active measures against the clerical party; while France probably has not the will, and certainly has not the power, to interfere on the part of the Papacy at all. There can be no doubt that the present attitude of Germany and Italy has deeply modified the foreign policy of the present French Government, many of the leading members of which are inclined to do all in their power to help the POPE; and it is only because Germany, and Italy under the shelter of Germany, insist positively on having their own way, that the Duke of BROGLIE recognizes the necessity of succumbing. Still it is not Italy or Germany, nor even England, but Spain, that at the present moment most affects and is affected by France. It was in a great measure the existence of the French Republic that made the reign of AMADEO a failure; and it was the example of France that made many Spaniards acquiesce in the conclusion that when Monarchists are without any Monarch whose reign is possible, a Republic without Republicans is the best solution of the difficulty. The same causes too which prevent France from interfering generally on behalf of the Papacy operate to prevent its interfering, as many members of the present French Government would no doubt gladly see it do, on behalf of the Carlists. Setting aside the direct action of the Communist party in both countries, which, however, is not an inconsiderable cause of the present anarchy in Spain, the number of indirect modes in which different events in France have helped to produce this anarchy is remarkable. On the other hand, the anarchy of Spain is highly useful to the Conservative party in France, as it warns Frenchmen of the utter folly of allowing the conduct of public affairs to fall into the hands of men who are destitute of every quality requisite for conducting them properly; and the weakness and incoherence of the new Federal Republic affords a salutary lesson to those Frenchmen who have nourished a belief that things would go on better in France if its great component districts were invested with something approaching to independence.

THE EDUCATION ACT AND THE DISSENTERS.

THE most important clause of Mr. FORSTER'S new Bill is the 3rd, which repeals DENISON'S Act and the 25th Clause of the Education Act. Threatened men live long, and the proverb seems likely to be made good in the case of the latter of these provisions. For two years all the wrath of the Dissenting community has been poured out on it. That a man who is too poor to pay for his children's schooling should be allowed to choose where they shall be taught reading, writing, and arithmetic, has called forth as much vituperation as ever fell to the share of the Established Churches of England, Scotland, and Ireland. Yet, in spite of all this, the 25th Clause is substantially re-enacted in the 3rd Clause of the new Bill. There are important changes in the form of the clause, but none that affect its spirit. The school fees are no longer to be paid by the School Boards; the inability of the parent will only constitute a reason for their being paid where a by-law requiring children to attend school is in force, and the allowance made to the parent to enable him to pay the school fees is not to exceed one farthing for each attendance, amounting at the outside to about 2½*d.* a week. But the liberty of the parent to choose to what school his child shall be sent, provided that there are more than one, is retained; and though the limitation of the fee to a farthing for each attendance makes it clear that no portion of it can go to subsidize religious teaching, yet the whole ten farthings may go to subsidize schools in which religious teaching is given. Mr. DIXON is perhaps no longer able to look at this question with the calmness becoming a Christian philosopher, but if he should by any chance be still open to reason, we should like to ask him how he thinks proposals similar to his own would have been received at the hands of the Government. No doubt, when Mr. FORSTER sat down after moving for leave to bring in a Bill to set up School Boards everywhere, to make all School Board schools secular, and to compel all parents who cannot afford to pay their children's school fees to send them to School Board schools, there would have been a little chorus of praise. The representatives of the Nonconformist interest would have got up one after another to congratulate the Government on having at length—"at length" would have been markedly accentuated—approached the subject in a statesmanlike spirit. But when the statesmanlike measure had gone to a division, what would have been its chance of success; and if by some inconceivable series of accidents it had passed through Parliament, what would have been its reception in the country? Mr. DIXON may say that it is not his business to answer these questions. But he will admit that the responsibility of the Government in matters of this kind is greater than the responsibility of a private member. Mr. DIXON has done all that is required of him when he has thrown his pledges to his constituents into the form of a Bill, and done his best to whip up the ninety odd members who usually follow him into the lobby. But this is not the way in which a Minister of the Crown can deal with the subject of National Education. He has to think of something more than the empty enunciation of barren principles. It rests with him to see that, so far as Parliament and the Executive can ensure it, the people shall be educated, and if he does not see his way to reaching this end by one road, he is bound to try to reach it by another. Mr. DIXON cannot judge the Government fairly on this question, because he has somehow persuaded himself that it might easily be dealt with in the way he suggests. He does not find fault with them for not at once proposing to disestablish the Church of England. If there are any fiery spirits among his supporters who wish him to go the length of voting against Ministers at every opportunity because they will not adopt Mr. MIALL'S motion, he probably does his best to soothe them with assurances that public men must not be too far ahead of their time, and that there is a great deal of work to be done in the constituencies and in Parliament before disestablishment can fairly be forced down a Minister's throat. Yet it is probable that to disestablish the Church of England would be an easier matter than to force any number of English parents to send their children to secular schools, or to insist upon rural ratepayers setting up schools of their own when the educational wants of the parish are amply satisfied by a voluntary school maintained at the expense of the parson and the squire. If impossibilities are not to be demanded even of a Liberal Government as regards disestablishment, why should impossibilities be demanded of them as regards elementary education?

It may be asked why, if the 25th Clause, or something tantamount to the 25th Clause, is so indispensable to educational

progress, it should be altered from its original form. There are reasons which need not now be repeated why the substitution of Poor Law Guardians for School Boards as the authority charged with the payment of school fees in the case of parents too poor to pay them themselves, is to be regarded quite apart from religious considerations as a substantial improvement in the Education Act. On this point the only doubt is whether the Bill might not have advantageously gone further in the same direction. But even as regards the religious difficulty the 3rd Clause of the amending Bill promises to be an improvement on the 25th Clause of the Act. It may seem a mere matter of words whether the 2½*d.* which is the most that can be paid for any one child is paid by the School Board to the managers of a voluntary school, or by the Guardians to the parents of the child. The rigid Nonconformist may say that in theory one process is as bad as another; that if it goes against his principles to allow his money to support, however indirectly, a school in which somebody else's religion is taught to somebody else's children at somebody else's expense, the wrong done to his conscience is equally great whether the payment be called poor-rate or education-rate. In practice, we suspect the wrong will seem very much less. The analogy which has so often been quoted of paupers dealing at Denominationalist grocers' or cheesemongers' will again be useful by way of explanation. If, instead of giving outdoor relief in money, it had been the custom for the Guardians to pay the bills contracted by outdoor paupers at certain shops, great objection would probably have been taken to the paupers being allowed to choose these shops for themselves. The Guardians would have seen the name of the shopkeeper at the head of every bill sent in, and some among them might easily have been troubled with a sense of personal responsibility for the pauper's selection. As it is, the money spent in outdoor relief is paid to the individual pauper, and beyond taking care that it is not, at the outside, more than enough to keep body and soul together, the Guardians have no further concern about it. Still more will this distinction hold good in the case of educational relief. Under the 25th Clause the payments are in a manner ticketed. They are made, not by the individual ratepayers, but by the rating authority, and they are made to the School Boards. A Town Council or the overseers of a parish are under much greater temptation to come forward as martyrs than the individual ratepayer is, and they have far more direct notice when the occasion presents itself. Under the 3rd Clause of the present Bill there will be no such field for cheap heroism as was afforded at Birmingham the other day. There is very much less glory about a solitary ratepayer refusing to pay his poor-rate than there is about a whole Town Council refusing to honour a precept of the School Board. The one is easily confounded with the mass of defaulters, and unless he can contrive to make himself especially conspicuous, he may be supposed not to have the means of paying the rate, instead of having a spirit above paying it. Here and there perhaps an effort will be made to screw some well-known personage up to the point of overt resistance, but even then it will be only an act of individual obstinacy, and as such it will be very much less striking than the official protest of a whole Town Council or even of a brace of overseers. There is a fair probability therefore that the proposal of the Government, though it will not silence the Dissenters, will at all events deprive them of the means they have hitherto enjoyed of making their grievances look larger than life. To transfer the controversy about the 25th Clause from the rating authorities to the ratepayer is like turning a noisy man out of doors. He may shout as loudly as ever, but the atmospheric conditions will be less favourable to his shouts annoying his neighbours.

AMENDMENTS TO THE JUDICATURE BILL.

AS might have been anticipated, the notice papers are rapidly filling with amendments on the Judicature Bill. Of those which have appeared at present, by far the most important are Mr. OSBORNE MORGAN'S and Mr. FOWLER'S. The main object of Mr. MORGAN'S amendments appears to be to fix in the clauses of the Bill the concessions which the ATTORNEY-GENERAL offered on the second reading. One of these was that every Common Law Division should have the aid of at least one Equity-trained Judge. The ATTORNEY-GENERAL very reasonably objected to the introduction of a clause which should specify the qualification of the Judges to be appointed, by reference to the sectional distinctions which it is the object of the Bill to obliterate, and we are glad to see that Mr. MORGAN has paid due regard to Sir JOHN COLERIDGE'S scruples. He proposes to enact, not that a Judge defined as an Equity Judge should be attached to each Common Law Division, but that one newly appointed Judge should be added, assuming that the selection will be made, as no doubt it will be, in accordance with the Government pledge. It is not improbable that a vacancy may occur in each Court before the new system comes into operation, but if it should not, it is not the less important that the Common Law Judges should, at starting, have the support which they have asked for, and that the appointment of the new Judge should not be delayed for want of a vacancy. Mr. MORGAN accordingly proposes that the new Judge in each Court shall be appointed in any event, and that if this should happen to lead to an excess beyond the intended strength of the Court, the quorum should be reduced to five on the occurrence of the next vacancy. This is clearly better than leaving the efficiency of the Courts at the commencement of the Act to depend on chance, and it is not at all likely that the redundancy of strength, if it occurs, at all, will last more than a very short time. After the principle has been so frankly conceded, it is not to be supposed that any opposition will be offered to this mode of giving effect to what everybody seems to desire.

Another important amendment proposed by Mr. MORGAN relates to the constitution of the Court of Appeal. On this point, as on the other, the ATTORNEY-GENERAL entirely agreed with Mr. MORGAN'S view. Under the Bill as it stands the nine ordinary Judges of the Appeal Court would have comprised only two Equity Judges, one of them being at least as much a representative of Common Law as of Equity. To remedy this, the ATTORNEY-GENERAL suggested that, instead of transferring as proposed three Common Law Judges to that Court, three new Judges versed in Equity should be put into it. This proposal was welcomed with general approval, and has been embodied in Mr. MORGAN'S amendment.

A more serious question is raised by the amendments of which Mr. FOWLER has given notice. It has been admitted on all hands, throughout the controversy to which the Bill has given rise, that, if the procedure of the Court of Chancery is to be reformed by the substitution of *viva voce* for affidavit evidence on contested issues, as proposed by the Bill, by the resumption by the Chief Judge in Bankruptcy of his own duties, now delegated to Registrars, and by remedying the justly denounced practice of handing over Judges' work to Chief Clerks without any adequate check from superior authority, a considerable increase of judicial strength will be required. Parliament has before it a choice between two things. Either it may make a paper reform in the Court of Chancery by directing four Judges of First Instance to do in a workmanlike way the work of eight, with the full knowledge that the direction must be simply disobeyed as an impossibility, or it may supply the means of performing its behests, and tell the Court of Chancery that it shall no longer be allowed to get through its business in the hurried and slovenly fashion which has hitherto prevailed, and shall be supplied with just so much numerical strength as it really requires, and no more. No one doubts that the House of Commons means this great reform to be a reality, and that it would not knowingly suffer it to be converted into a sham for want of the requisite strength in any of the Courts; but one of the difficulties incidental to a discussion of such details in Committee of the whole House is that only a few members are practically acquainted with the necessities of the case, and that most of those are deterred by feelings of personal delicacy from introducing proposals which might very probably lead to their own advancement. We are very glad, therefore, that the subject has been taken up by a member who, though in former times familiar with Equity practice, has long ceased to have any professional interest of his own to promote. Mr. FOWLER indicated his views with great clearness in his speech upon the second reading. He pointed out that the Court of Chancery, with only the same number of four Judges of First Instance which it had more than thirty years ago, is now doing an enormously increased amount of work; that the existing arrears, though they may have been somewhat exaggerated, are at any rate enough to show that the Judges are strained to the utmost and yet unable to keep pace with their duties, and consequently that any additional labour thrown upon them must be met by additional strength. The only question is how large the addition should be, and we have seen no attempt to impugn Mr. FOWLER'S calculation.

Mr. FOWLER says that, if the Bankruptcy work now done by deputy is thrown upon the Court, as the Bill rightly proposes, the entire time of one additional Judge will be required for that purpose. In point of fact, it is more common to see two

Registrars than one sitting in the place of the Chief Judge, and no one conversant with the Court of Bankruptcy will say that one additional Judge would not be fully occupied with that business alone. To deal with the abuses of the Judges' Chambers in Equity is a still more formidable business. Only the suitors in Chancery—happily a small section of the community—and their professional advisers know the extent of the mischief. The Chief Clerks are so loaded with judicial work, which they were never meant to do, that their own work in taking accounts and the like gets hopelessly in arrear, and all the delays of the old Masters' offices are reproduced and aggravated. The Judges, with only stolen hours to give to it, are wholly unable to cope with their share of the Chamber business. What comes to them is hurried through or thrust aside in a manner neither satisfactory to themselves nor to the suitors, and nine-tenths of what ought to go to them stops short with their subordinates, because it is known that the Judges have no opportunity of attending to it. It is the same with more serious questions arising in Chambers, which require a full discussion. Summonses are adjourned for argument into Court, and appear week after week in the paper without being reached, until a brief on an adjourned summons has come to be regarded as an intermittent amusement for months. As a natural consequence suitors commonly put up with Chief Clerks' decisions rather than encounter the law's delay, and the result is that the right to have an adjudication on all important points by the Court is *de facto* denied to Chancery suitors. Mr. FOWLER will, we are sure, be backed up by every one who has any experience in the matter in saying that each Judge requires from one to two days a week to dispose of the Chamber business properly belonging to him, which is now shunted on to his clerks. The most moderate allowance that can be made on this account is one Judge added to the strength of the Court.

But these calls upon the Judges' time are small in comparison with that which the duty of hearing witnesses instead of reading affidavits and depositions will impose upon them. Ever since 1852 attempts have been made to remedy this abuse. They have all failed because the Judges, seeing that they had no time to sit as at Nisi Prius, showed very little inclination to encourage *viva voce* examination. Other reasons contributed to the miscarriage. One (not the least important) which this Bill will remove was, that cross-examination in Chancery lost half its value by coming too late to afford opportunity for contradiction. Witnesses know that what they said on cross-examination could not be displaced by counter-evidence, and they adhered with proportionate tenacity to what they had sworn in their affidavits. All this is to be remedied now. The Chancery Division is to have real examination and cross-examination of witnesses whenever necessary, and the work now either left undone or done out of Court by a number of examiners is henceforth to be done by the Judges themselves. It is a common thing now to hear depositions, which have occupied an examiner days to take, read in Court in an hour; and if the change in the practice is to be anything but nominal, a vast increase of judicial time must be bestowed upon the hearing of every case involving a contest of facts. Any one who pleases may be able to form an estimate of the extent of this tax on the time of the Court by reading one of the daily reports of the TICHBORNE trial. He will probably find that he can digest over his breakfast all that it has taken the Court a whole day to extract, and this will give a fair measure of the additional burden which will be thrown upon the Equity Judges by requiring them to hear witnesses instead of reading their evidence. Mr. FOWLER, we are satisfied, rather underrates the additional strength which will be called for on this account when he puts it at two Judges; but even with this modest estimate added to the requirements of Bankruptcy and Chamber business, he is driven to the conclusion that nothing less than a staff of eight Judges of First Instance will suffice to keep down the work of the Chancery Division. He accordingly proposes to add three Judges to the five (other than the Lord Chancellor, who will not sit as a Judge of First Instance) who form the quorum as the Bill stands. If it could be shown that this is an excessive demand, there would be reason to reject it; but in truth it will be much more difficult to prove its sufficiency; and if it is not conceded the Bill will simply break down, and the Chancery Judges will have to bear the reproach of not giving effect to directions in an Act of Parliament which it will be a physical impossibility for them to comply with. If the Government are in earnest in supporting the ATTORNEY-GENERAL'S denunciation of higgling parsimony in such a matter, there can be no opposition to the proposal. The effect, no doubt, will be to add a little to the cost of the Courts. If the scheme is adopted there will be twenty-five Judges of First Instance, of whom four will be sometimes occupied in the Court of Appeal. The present establishment is twenty-four Judges of First Instance, and the addition of one certainly seems moderate enough when the extra work thrown upon the Courts is taken into consideration.

In a thoroughly statesmanlike spirit, Mr. FOWLER proposes further to utilize the increased strength of the Court by remedying incidentally another not unimportant defect in the Bill. At present it provides that points of law may be reserved for, and errors of single Judges corrected by, Divisional Courts, as is done now by the Common Law Courts in Banc. In terms these clauses extend to the Chancery Division, but they would be utterly inoperative there, because no Divisional Court could sit without paralysing the business of the Division. As regards the Chancery Court, the quasi-appeal to the Divisional Court is a paper provision only. The Lords Justices, who have hitherto fulfilled somewhat the same function in Chancery which the Courts in Banc do at Common Law, are no longer to sit for that purpose; and the result is, that while suitors at Law in the most trifling action would have the protection of an intermediate hearing, suitors in Equity in the gravest cases would be forced to go direct from a single Judge to the ultimate irreversible Court of Appeal. One of two things is certain; either the jurisdiction of the Courts in Banc which the Bill preserves is a mistake, or else the practical denial of a similar appeal in Equity is a wrong, and we think Mr. FOWLER has hit upon the right way of curing this patent defect in the Bill. He proposes to group his eight Equity Judges in four subdivisions of two each, giving to them jointly powers analogous to those exercised by Common Law Divisions, and entrusting to the Lord Chancellor the duty of regulating by General Orders the nature of the business which shall come to these subdivisional Courts. The working of his scheme would therefore be, that for the bulk of the business, such as the hearing of witnesses, the conduct of Chamber business, the disposal of motions and petitions, and the like, the two Judges of each subdivision would sit separately; while for the hearing of reserved points and other matters of equivalent importance they would form a Court of two, like the Court of the Lords Justices, to which suitors have become accustomed. This, if not an absolutely perfect arrangement, is, we believe, by far the best which can be easily worked into the frame of the present Bill; and all who desire to give full effect to the principle of the Government measure, without party prejudice or petty and pernicious economy, should, we think, give Mr. FOWLER their hearty support.

ANNEXATION OF THE FIJI ISLANDS.

THE question of adding the Fiji Islands to the Colonial Empire of Great Britain is not unattended with difficulty. When the project was first suggested a dozen years ago, it was regarded with favour by the Duke of NEWCASTLE, then Colonial Secretary, but on the earnest opposition of Mr. GLADSTONE it was disapproved by Lord PALMERSTON'S Cabinet. The reasons against the assumption of additional responsibilities of government are obvious and urgent; yet it would appear that Mr. GLADSTONE and his colleagues have at least considered the annexation, or perhaps the protection, of the Islands as worthy of serious inquiry. From the list of their probable motives any desire for an extension of territory may be confidently excluded. The feeling of the country on these questions has been altered or reversed since the beginning of the century; and the present Government is especially averse to any scheme which in a different state of opinion might be possibly suggested by national vanity. Some of the supporters of annexation dwell on the convenience of acquiring a coaling station in the South Seas, and they point out that the circuit of British dominion is interrupted by a gap of many thousand miles between New Zealand and British Columbia. It is also urged that the United States may probably soon acquire formal possession of the Sandwich Islands, which may be already regarded as an American dependency; but the jealousy which has sometimes prompted European States to claim compensation at the expense of third parties for the aggrandizement of their neighbours has happily become obsolete as a motive of English policy. At one time some uneasiness was excited in Australia by the supposed designs of the French; but there can now be little doubt that the English language is destined by some process to

prevail in the Fiji Islands. The Government of the United States might in some possible contingencies acquire the protectorate of the Islands; but the formation of an American colonial system has as yet scarcely commenced; and it will require, if it should hereafter be established, important changes in the Federal Constitution. The advantages which might accrue to the Royal or mercantile marine from the acquisition of the group of islands will certainly not determine the action of the Government or of Parliament. It might probably be practical, if it should be found expedient, to form a coal depôt in a port of Fiji without assuming the sovereignty of the country.

The reasons which have to a certain extent modified Mr. GLADSTONE'S distaste for annexation are of a different order. At the antipodes, as at home, the Government is compelled to follow rather than to direct the tendencies of the population. The Fiji Islands are in a genial climate, within reach of the great Australian settlements, and not far from the ordinary track of navigators. Wherever there is money to be made, or even a free and lawless life to be enjoyed, English and foreign adventurers are certain to congregate, although their presence may probably be unwelcome to the natives. Seamen and roving traders have settled on parts of the coast; and within a few years they have contrived to establish an anomalous form of government under a native King, directed by white advisers under the name of Ministers. It is out of the question to recognize as a civilized Government an anomalous authority which has probably no claim to represent the great majority of the population. At the same time it is not desirable to interfere with an organization which may possibly contain some rudimentary elements of law and order. For the present, it would seem that the majority of the white inhabitants are English; and it is for many reasons necessary that subjects should not in those regions be allowed at pleasure to cast off both Imperial and colonial allegiance. Any vicious practices which may take root in Fiji with the concurrence and connivance of the European residents will be attributed to the laxity of the English Government; and probably it would be thought necessary, if they provoked a reaction on the part of the natives, to protect them against the dangers with which they might be threatened. The old legal maxim that allegiance is indissoluble has of late years been relaxed both in practice and by express convention; but it is still true that an Englishman remains a subject as long as he is not naturalized in some other civilized country. The white population is apparently not unwilling to recognize English sovereignty; and Mr. M'ARTHUR undertook to present at some future time a petition or memorial to the QUEEN praying for the annexation of the Islands. If the application proves to be genuine, and if it has been properly authorized, full consideration ought to be given to the question before the offer is positively rejected. Naval officers have on some occasions, and perhaps justifiably, assumed an authority over English settlers, and even over native tribes, which may possibly foreshadow formal annexation. One captain of a ship, in the exercise of his discretion, ordered the inhabitants of a maritime district to abstain from defending themselves against the neighbouring savages, and to rely exclusively on the so-called Government for protection. The consequence was that the barbarous assailants, who are unluckily also cannibals, were encouraged to commit further outrages; and it will not be surprising if the duty of chastising them ultimately devolves on a detachment of sailors and marines. Power always imposes obligations; and a Government must, if possible, afford protection even to its less deserving subjects.

The difficulty of leaving the Islands to themselves is increased by the facilities which they afford for the prosecution of a system of kidnapping which is scarcely distinguishable from a regular slave trade. The disinterested efforts which have been made for more than half a century to suppress the slave trade in all parts of the world form a singular and honourable exception to the general principles of English policy. Doctrines of non-interference have been habitually neglected or overruled when there was a question of putting down a nefarious practice which had become especially obnoxious to English feeling. Treaties were made with several European States for the purpose of enabling English cruisers to capture slave ships under foreign flags; and squadrons were maintained on the African coast, at a great expense of life and money, for the purpose of preventing the transport of negroes from Africa to the Spanish and Portuguese settlements. On more than one occasion the energy of the English Government, directed by a succession of statesmen who shared the popular enthusiasm, involved the country in the risk of a war; and down to the time of the Southern secession, the favourite pretext for American hostility to England was the officious interference of philanthropists with the beneficent institution of slavery. The negro slave trade has happily come almost to an end, in consequence of the diminution of the demand for slaves in Brazil and Cuba. It would be intolerable that English subjects within reach of English men-of-war should be allowed to seize and sell the unoffending natives of the South Sea Islands. It is true that there is no market open for nominal slaves, but the scarcity of labour in some of the Australian colonies creates a demand for immigration which is sometimes gratified by unscrupulous traders who profess only to import free settlers. It is not easy to distinguish in the case of a poor and speechless barbarian between the statements of the agent who may have captured or cajoled him and the facts of the case. There is no doubt that the trade in human beings is of all other pursuits the most demoralizing, and frightful cases of cruelty and fraud have been proved against some of the kidnappers. They have sometimes hoisted flags used by missionaries to decoy natives on board, and it was in revenge of similar misfortunes that Bishop PATTESON was killed by a body of natives. In the Fiji Islands themselves there is no sufficient security against the direct establishment of slavery. The Government has little power, especially over settlers at a distance, nor is it always certain that the members of an irregular and accidental body may not be connected with the practices which it is their duty to suppress. The antipathy of the English nation to the slave trade, though it may of late years have become less zealous in default of immediate provocation, is still strong enough to force upon the Government the duty of suppressing any system approximating to a trade in slaves which may have been established within reach of the Australian colonies. It may probably be found that the simplest and cheapest way of eradicating the crime is to assume the duty of governing both the native people of Fiji and the European settlers. The difficulties and objections which were suggested by Mr. GLADSTONE undoubtedly deserve serious consideration. It would probably become necessary to conquer as well as to govern the indigenous tribes; and modern opinion is adverse to the employment of Imperial troops in colonial wars. On the other hand, a white population can generally protect itself if it is not taught to rely on the assistance of regular forces. Before the next Session the Government will probably have arrived at some final determination.

ELECTION EXPENSES.

THE large majority against Mr. FAWCETT'S Bill for throwing the expenses of Parliamentary elections on the ratepayers was probably due in some measure to the disinclination of the House of Commons to introduce piecemeal changes into the system of local taxation. On the ground of principle a plausible case may be made out in favour of relieving candidates from the heavy costs to which they are now subjected. A man who undertakes to represent a constituency in Parliament may be regarded as rendering an important public service for which he should not be called upon to pay. Reasoning of this kind, however, is open to the remark that it may easily be carried a step further. On the same ground on which it is contended that members should be exempted from the tax of election expenses, it might be argued that they should also be paid for their labours. It is certainly not desirable that admission to the House of Commons should be limited exclusively to wealthy men, and it can hardly be denied that the tendency of recent changes has been to fill it with a large proportion of members whose only qualification for the position is the length of their purses. The *Times* very justly observes that the abundance of such representatives, involving as it must a comparative scarcity of men of other types, threatens us with at least one danger, and that is a falling off in the raw material of statesmanship. It would be hopeless to think of training the middle-aged soap-boiler to administrative work. He naturally regards his return to Parliament as the crown of his career, not as the beginning of an apprenticeship to new duties. Even if he had any of the requisite qualities, his age and personal tastes would be against him. He wants to enjoy an easy dignity, not to assume fresh labours and responsibilities. When we look beyond the front benches on each side, the prospect is certainly somewhat depressing, and it is difficult to conjecture, if things go on in this way, where our future statesmen are to come from. A strong case would

have been made out for Professor FAWCETT's Bill if it could have been shown that there was any likelihood that it would lead to the introduction into the House of Commons of young and able men who are at present kept out by the expenses of elections. In this country it is usual to attach more importance to considerations of practical expediency than to *doctrinaire* logic, and the weak point of Professor FAWCETT's position was his inability to show that the change which he proposed would be attended with any practical advantages, or, indeed, with much result of any kind. Election expenses may be divided into two heads. There are, first, the official expenses, which may be prescribed and regulated, and there are the voluntary expenses which a candidate may choose to incur, and which are of a kind with which it is impossible to interfere by Act of Parliament. At the last general election, for example, the total expenses have been returned at 1,500,000*l.*; but only 90,000*l.* of this sum, or one sixteenth, came under the head of official expenses. Poor men are not likely to be much assisted by being relieved of a trifle like this, while the other fifteen-sixteenths of the tax still press on them. It cannot be doubted that one effect of Professor FAWCETT's measure would be to multiply the number of contested elections. Men of small means or of no means at all would be tempted to come forward as candidates, and rich men would naturally resort to still more lavish expenditure in order to get the better of opponents who could not afford to go beyond the regular expenses which would fall on the ratepayers. A great deal more money would be spent on elections, and poor candidates would still find it impossible to compete on equal terms with wealthy ones. The class who would suffer most would probably be men of moderate means and moderate opinions, who would be unable to keep pace with the reckless outlay of the millionaires, or the still more reckless pledges of the demagogues.

The practical question which was raised by Professor FAWCETT's Bill was simply whether it was worth while to introduce a change of this kind for the purpose of affording a trifling and almost illusory relief to poor candidates. If the measure were acceptable on other grounds, we do not think much could be said against making the constituencies pay. The burden which would be thrown on them would be very light—not more, it is calculated, than three-halfpence in three years from each ten-pound householder—and this would be a very small price to pay for a really beneficial change. But would the change be beneficial? Professor FAWCETT has himself foreseen the danger of men of straw setting up as candidates, but he thinks he has provided for it by a clause declaring that every unsuccessful candidate who has not polled one-fifth of the total number of electors voting at an election shall, with his mover and seconder, be liable for his share of the expenses, lawfully incurred, for the provision of presiding officers, poll-clerks, polling-booths or rooms, and other requisites for the conduct of the election, and shall be bound to pay the same to the local authorities, so as to diminish the amount payable out of the rates. There is no provision, however, for requiring a deposit from a candidate beforehand, and the local authorities might have some difficulty in recovering election expenses from men who have no money at all. It is obvious that there would be a considerable temptation to persons of this stamp to come forward. They might be put up in order to divide a party, or they might be anxious to be bought off. Tricks of this kind are not unknown at present, and they would be greatly facilitated and encouraged by the plan of making constituencies responsible for election expenses. Candidates would always have a chance of getting the proportion of votes which would entitle them to have their expenses paid for them, or if they fell below it, and could not find backers to help them, they would simply have to go through the Bankruptcy Court, and leave the local authorities to whistle for their money. Professor FAWCETT argued that, if the ratepayers were to bear the costs of elections, they would have an interest in keeping them as low as possible, and this would be a great counter-check to the army of printers, bill-posters, advertisers, solicitors, and other tradesmen and professional agents who now prey upon candidates; but the greater part of these expenses would still continue to fall on candidates, and it may be doubted whether there is really much margin for reduction in the regular official expenditure. Moreover experience does not encourage us to hope for much from ratepayers in the way of promoting economy. The helplessness of ratepayers to regulate the expenditure of their funds is one of the notorious difficulties of local taxation, and we should rather expect to find expenses increase than diminish under the new system. It is tolerably certain at least that the tendency of the change would be to increase what may be called the voluntary expenditure of candidates, since rich men, in order to maintain their relative superiority in this respect, would be led to spend their money more freely.

It was stated that one of the objects of the Bill was to promote the crotchet of working-men members. Mr. TREVELYAN, it appears, has no confidence in a House of Commons in which there is not a single member who has dug drains or trimmed hedges. Whether any great accession of political wisdom would be likely to result from active employment in these operations may possibly be doubted, but Mr. MORRISON candidly explained that the advantage of bringing working-men into the House would be to show how very silly they would look when they attempted to reduce their theories into the form of practical legislation. It need hardly be said that the notion that every class of the community should be directly represented in Parliament by actual members of its own order is founded on an absurd misconception of the objects of such an assembly. Hedgers and ditchers may be able to give valuable evidence on various matters, but their evidence can be obtained without making them members; and it does not follow that, because they are intimately acquainted with the details of certain grievances, they are therefore capable of devising a remedy for them. It is obviously hopeless to attempt to preserve a real labouring man in the House of Commons, for the simple reason that he must cease to labour if he is to attend to his Parliamentary duties. We are not aware that any actual working-man has ever offered himself as a candidate. The so-called representative working-men are only artisans who have found it more profitable to abandon their original trades for that of political agitation. It is possible that, as Mr. MORRISON suggested, if Mr. ODGER or Mr. BRADLAUGH were to attempt to put their ideas of social regeneration into a form in which they could be submitted to the House of Commons, they would look extremely ridiculous; but it may be questioned whether it is worth while to make an important change in our electoral system on the chance of producing an exhibition of this kind. Election expenses are not the only reason why the House of Commons is chiefly composed of men of means. As a rule, only a man with some sort of competence can afford to give up so large a share of his time as is required for Parliamentary duties. It is quite certain that, if it is thought to be necessary to have hedgers and ditchers in the House of Commons, it will be necessary to compensate them for giving up their regular occupations.

THE PERSIAN LANGUAGE.

WHILE jewellers are discussing the probable value of the regalia of the Shah, and financiers are doubting about the prosperity of a State that has no public debt, a few words may not be out of place regarding the polished language which is spoken by the King and his subjects. A good deal has been revealed to us from the inscriptions at Murghab and Behistan, and we have every reason to connect the most ancient form of Persian with the Sanskrit or the Indo-Germanic; but posterity might have expected from the ancient connexion between Greece and Persia more than it has actually got. From Spartan intrigues, Macedonian conquests, and Roman expeditions, we ought to have obtained something beyond incidental notices of Oriental customs on which travellers have thrown doubts, and scraps of dialects over which philologists have wrangled. Indeed, a distinct fragment has come down to us of another language spoken by a nation which succumbed to force and has been razed out of history. Plautus, in his play of the *Pœnulus*, has transmitted to us a specimen of the Punic language of sixteen lines in length, such as it was when spoken by Hannibal; and Semitic scholars have felt no insurmountable difficulty in deciphering at least ten lines of its purport from the cognate Hebrew. Yet, at one period, Persian was in all probability as familiar a sound in some of the bazaars of Asia Minor as ever Carthaginian could have been in the forum of Rome; and the jewels and brocades of Persian deputies in Greek colonies doubtless excited as much attention as the Punic wares of Hanno, which Macaulay characteristically places near the shambles of Volero the flesher, in the "Lay of Virginia." Themistocles was presented by the Great King with the revenue of three cities; in other words, he obtained what would now be termed either a *jaghir* or an assignment for his personal support. Grote, following Thucydides in preference to the exaggerations of Nepos, tells us that the Athenian general learnt in a year so much of "the Persian language and customs as to be able personally to communicate with the King, and to acquire his confidence." And we all know that the apostles, after they had received the gift of tongues, were heard to speak in their own vernacular by "Parthians, Medes, and Elamites." But, for all this, no such thing as an edict, a set of current phrases, or a distinct sentence of the spoken language of Elam has come down to us in its

original shape, through Greek or Roman writers, as far as we can discover. Aristophanes introduces into one of his comedies a pseudo-Persian, who, as might be imagined, talks a gibberish akin to the *thromuldo boskos* which mystified Parolles. We have, however, some words like *parasang* or *farsang*, which fell on the ears of the Ten Thousand with wearying iteration; and there are proper names which, in spite of Laconian brevity or Athenian amplification, can be tracked to their sources. Sir W. Jones, it is true, talks about "learned trifling," and sets little value on the catalogue. But, as can easily be seen, Alexander and Xenophon must have heard names pronounced which are surprisingly similar to modern Persian. Roxana is Roshan, or Roshana. Parysatis can be nothing else but Pari-zadi, or Fairy-born. Statira is the Persian Sitara, the Star. The distance between Darius and Dara or Darab is nothing. Xerxes, though derived by divines and Orientalists from Khshayarsha, is marvellously like Shir-Shah; and Artaxerxes, if Artakshasta in the cuneiform character, is at this day, with the Parsees of Western India, Ardeshir, or the Strong Lion.

Our business, however, is with the modern Persian, and its origin and history are somewhat as follows. If the arrow-headed Persian was like Sanskrit, the former certainly contrived to get rid of all grammatical complications and subtleties, for nothing can be simpler than declensions and conjugations in the modern tongue. The story runs that the Sassanian dynasty, about the third century of our era, patronized literature, and set the fashion of a pure and elegant dialect. There were, about that time, two forms of Persian—Farsi, that of Persia proper, and the Pehlevi or Pahlavi, rough and uncourtly, and peculiar to Mazanderan and the mountainous parts of the Empire. This latter variety was discountenanced, and the best or most elegant form of Farsi was eventually known as the *Zabani Dari*, or language of the Court. Not long after this period came Mahomet and his successors, and carried everything before them. Religions, manners, and language were either swept away or modified by the victorious Khalifs, and though Firdusi composed his great epic mainly in the old unadulterated Persian, the language was enriched and adorned by a copious infusion of Arabic words and phrases. What took place has been remarked on other occasions in the formation or development of mixed or composite languages; in England, when Norman French came in contact with Old-English; in India, when the rustic Hindi was expanded by the aid of Persian into Urdu, the language of the camp, commonly called Hindustani. Persian, already copious and abounding in compound epithets, was swelled by a torrent of Arabic. The framework of the language remained in all its simple solidity. The grammar, with its verbs and nouns, or as Oriental lexicographers put it, with its words for *actions* and for *names*, modified neither conjugation nor declension; and the familiar and common expressions for animals, natural objects, and things in daily use held their ground. But an enormous addition was made to the power of expression possessed by educated and literary men, and, with the change of religion, even the colloquial use of many Arabic words and phrases was gradually adopted. The result is that a Persian writer, poet, historian, philosopher, or divine, can at will vary his style, and express his meaning by recourse to profuse and seemingly inexhaustible stores. The Persian and Arabic Dictionary of Richardson now before us, is a bulky volume of more than seventeen hundred pages, with two columns to each page. Taking the number of words in each column, on the average, to be twenty, we have a total of nearly seventy thousand for the combined forces of these two great tongues. An eminent Orientalist has calculated the total at eighty thousand. English students need not, however, imagine that, to become a fair Persian scholar, familiarity with one-quarter or even one-tenth of these is imperative. If we are correctly informed that fifteen hundred words supply the materials for a long evening's debate in the House of Commons, it will be soon understood that a foreigner with a good ear and an aptitude for languages may, by the mastery of a few thousand words, say from five thousand to ten thousand, appreciate Sadi, dictate a letter in Persian, and discourse fluently with merchants and officials at Tabriz and Teheran. The main difficulties are encountered at the outset. An Englishman may be inclined to think other nations barbarians because they put words on paper from the right hand to the left, because they only express some three vowels, and because they have ruled that there is a certain sound inherent in each consonant which need not be otherwise written. We write *sun*, *bud*, and *milk*. A Persian contents himself with *sn*, *bd*, and *mlk*, which to him signify, respectively, "a year," the adjective "bad," and the legal term "property." It must be admitted, for all this, that Persian caligraphy is a stumbling-block and a sore trial to the temper. Oriental penmen have three styles. The first is termed Nishki, is nearly upright, and must be learnt before any man can read a simple sentence in a book. The second is Talik, and though words, especially at the end of a line, are in this form written slantingly, one above another, this particular department must be studied by all who aspire to become fair Persian scholars. In the third, called *Shikastah* or *broken*, diacritical points are nobly disregarded, many letters are run into those that follow them, and the result is a cross between an expanded shorthand and those hieroglyphics which Sydney Smith declined to decipher twenty-four hours after he had put them on paper. The *Shikastah* is to all appearance a series of deterrent strokes and intemperate flourishes; but consummate practice enables a class of clerks and accountants to read it off with a certainty and a celerity absolutely marvellous. This running-hand, with other legacies, was bequeathed to the British Government in India by its Mussulman predecessor; and it is a proof of the versatility and suppleness of the Hindu character, that natives of the older religion, accustomed to a language and a literature written from left to right, were able to master the intricacies of the Persian character, and as penmen or readers to compete with, and even distance, Mahometans on their own ground. A Hindu has often been seen to get at the purport of a mass of papers discoloured by age, mildewed by damp, and pierced by the *insectes finses*, while a Mussulman has looked on hopelessly, like the Bohemian in *Quentin Durward* at the scroll presented to him by Toison d'Or. When an Englishman, however, has mastered the easiest form of the letters, he is struck at once by the similarity between his own language and Persian, though the likeness is not in sound or sense. Genders may be said to be unknown. Inanimate things are neuter, and living things of the two sexes either have different names or are distinguished by the affixes *nar* male, and *madah* female. The declension of nouns causes no perplexity. There is a short sign for the genitive, and an extra syllable for dative and accusative; two terminations distinguish the plural, with occasionally a third specially borrowed from the Arabic. The rules for degrees of comparison are simplicity itself; and verbs, instead of being erratic, defective, irregular, traceable to two or three roots, divisible under four or five conjugations, are, for all practical purposes, conjugated according to one method, and have three changes of tense. Then the auxiliary verbs *to be*, *to become*, and *to be willing*, are called in for supplementary tenses, or to form the passive voice. Now and then a Persian imperative is referred to some obsolete verb, and no polished language is wholly without some grammatical vagary, or some eccentric deviation from rule; but history may be fairly challenged to produce any vehicle of thought and expression which combines equal regularity of construction, equal simplicity of syntax, and equal wealth of phrase.

Persian, too, is not merely adapted to the development of a great national literature; to the subtleties of the casuist, to the flowing narrative of the historian, to the raptures of the sonneteer. Writers of original talent have excelled in all these departments, and others have embellished history with memoirs and correspondence teeming with personal anecdotes and picturesque details. But Persian, in a large portion of the East, has monopolized the field of State, diplomacy, and social affairs. For these latter purposes it is unquestionably superior to Arabic, and it distances Sanskrit and its numerous derivatives. It has not unjustly been styled the French of the East. A Persian diplomatist or petitioner can command every variety and degree, from extravagant and highflown metaphors to short and perspicuous phrases. A Viceroy can publish an edict, can promulgate a set of rules, can prescribe duties and threaten penalties in a fashion to be comprehended at a glance by nomads and rustics. Or, if so minded, he can, in controversy, resort to "less accurate language," and veil his purpose in profuse sentences where no diplomatist can be certain of a meaning, and no grammarian detect a flaw. We really could conceive Mr. Gladstone laying down "a choice of three courses" in correct and flowery Persian, of harmonious cadence, so as to bewilder the House; and we fancy that we could see our way to transmuting a polished epigram by Mr. Disraeli into a distich which would be appreciated in the bazaars of Shiraz. Indeed, so copious and diversified is the language, that it is possible to go even further, and to imagine the Chief Commissioner of Public Works crushing a subordinate and a savant, or rebuking a deputation, in the style of the "Life of Tamerlane," known to Persian scholars as the Zafar-namah, or "Book of Victory." It is curious that the great Arabian lawgiver is credited with a saying that Persian ought to be spoken in Paradise, and to this day unanimous testimony to its praise and honour is borne by diplomatists who have conducted affairs in Iran, by residents and travellers who have made any progress in speaking it, and by Indian officials who have either studied it on the frontiers of the Punjab, or who were familiar with that less perfect and pure form which was once in use, as the exponent of law and justice, in the courts and tribunals of a large portion of India. It is admirably suited to repartee, proverbs, pithy sayings, and polished reproof; and a language must have possessed a wonderful strength and simplicity of its own to have enabled those who spoke it to resist successfully all great or substantial changes at the hands of conquering Tartars and fiery and zealous Arabs. Few languages have passed through such an ordeal, or have survived such a strain.

We must, however, candidly admit that its poetical and even its prose works are too ornate, florid, and metaphorical to disarm a rigid censor or to suit a classical taste. The supremacy of Horace is in no danger from the odes of Hafiz. Zuleikha will never speak and smile as sweetly as Lalage; and we are soon wearied with verses crammed full of jasmines and violets, thorns and roses, lovers like moths perishing in the flame of the candle, Shirin pouting with the lips of the tulip, and Leila distinguished by the stature of the cypress and the cheek of the rose. We may therefore rest assured that, in spite of the Shah's visit, our obvious interest in the integrity and independence of his dominions, and its own intrinsic merits, Persian will not be heaped up on the curriculum of our schools and colleges, nor will it add a new terror to competitive ordeals. It will probably remain what it has been hitherto; a vast field of which the harvest is occasionally reaped by eminent linguists, or by servants of the Foreign Office, or by members of the Indian Staff who have found time for study in the monotony of the hot season, or have heard the dialect spoken in the cantonments of Peshawur or the

Derajat. But there has not been a time since the days of Hadji Baba, now more than half a century ago, in which Persia and its inhabitants have so justly claimed a share of public notice; and we have some satisfaction in thus briefly drawing attention to the antiquity, gradual improvement, and sterling merits of that elegant language; to its copiousness and comprehensiveness, which enable writers to condense thought into an epigram, or to spread it out over a page; to the exquisite simplicity of its grammatical rules; to its splendid specimens of caligraphy; to its historical and poetical legacies; and to its merits as a medium of communication, whereby, whether in the Court, the Council, the tribunal of justice, the counting-house, or the mart of commerce, it is emphatically the dialect of articulate-speaking men. We have endeavoured as much as possible in this paper to avoid the use of Oriental phraseology; but we may be pardoned for concluding with one specimen of Persian, the point of which it requires no great Eastern learning to catch. We are often told that in this world there are two kinds of folly; one which is aware of its own deficiency and is modest and retiring, and the other which is the reverse. A Persian sage has expressed this in the following couplet, neat and probably unsurpassed for terseness:—

Jáhil-i-basit ún ast, keh dánad na dánad,
Jábil-i-murakkab ún ast, keh na dánad na dánad.

In English, "the simple (basit) fool is he who knows (dánad) that he does not know. The compound (murakkab) fool is he who does *not* know that he does *not* know." Let us devoutly hope that the "Great King" during his visit may be so fenced against unconscious stupidity and jaunty impertinence as seldom to be led to meditate on the applicability of the above epigram to any of the countrymen of Palmerston and Peel.

THE MODERN TEUTON IN ROME.

THE roving habits now prevailing among certain classes of a few modern nations are apt to offer to an observant eye many quaint juxtapositions of racial peculiarity. It would seem difficult indeed at present to light on a distinct variety of costume, manners, and style of life without finding these characters sharply defined by the proximity of the familiar Northern type. The eager push of English-speaking nations carries them in appreciable numbers into all the more attractive cities of Europe; and groups of prying tourists have to be allowed for as one pictorial feature of Egypt and Athens, Naples and Madrid. Nowhere perhaps is this imported element in city life more conspicuous than at Rome. Indeed the tastes of modern travellers would appear to have secured for that city something of the motley appearance with which the conquests of the ancient Republic and Empire must have invested it. In mere point of dress and superficial manners the contrast between [illegible] of the Augustan age and his rude captive—such a one as we may still see represented among the statues of the city—must have been more striking than any possible amount of unlikeness among peoples clothed approximately according to one code of fashion and sharing so many of the conventional rules of life. On the other hand, the foreign ingredient of the modern capital is probably much more impressive in quantity than that of the classic city even in its most cosmopolitan days. Three of the most advanced Teutonic nations appear to emulate each other in taking possession of the Sacred City, and it would be difficult probably to say whether Great Britain, the United States of America, or Germany is just now most numerously represented in that attractive metropolis.

The force of this foreign factor of Roman society is seen not only in its quantity, but also in its obtrusive self-assertion. The most casual visitor to the city can scarcely fail to observe the confident air of its tourist world. If he walks on the Pincio or in the Villa Borghese, he may easily note the English dandy who has learnt to stroll through those luminous and odorous spaces as familiarly as in St. James's Park. Or he may notice perhaps, among the ruins of the forum, inquisitive Germans energetically expatiating on their several features, with all the courage of long and undisputed possession. Nor is he likely to overlook the frequently recurring type of forewarned and unimpressible American moving rigidly erect across a background of soft marble shapes, who meets the voluble descriptions of his *valet de place* with the monosyllabic note of infinitesimal surprise. Nor is this happy assurance of manner confined to one sex among the *forestieri*. Perhaps the most striking illustration of the completeness of this new invasion of Rome is to be found in the troops of English and American women to whom the grand solemnity of the city forms, to use the recent words of George Eliot, "a background for the brilliant picnic of Anglo-foreign society." These ensconce themselves in the city with a sense of home comfort, just because of all the little social pleasures and diversions which they are able to import with them. Plenty of society, charming excursions to Tivoli and Frascati, so productive of passing flirtations, even a yearly horse-race and an occasional scamper behind the hounds on the Campagna—these are a few of the little solaces which our fair exiles are permitted to enjoy. A short walk through the streets of the strangers' quarter will easily show the extent of this new colonization. Jewelry and all the other little trifles so enticing to women are everywhere advertised in the plainest English. The amiable English papa is likely to be distracted by the choice of rival English local papers, while the solicitous mamma may be reassured by discovering the proximity of English church and curate, doctor and chemist. These and many other signs easily betray how completely the stranger has modified his new environment in conformity with his habits.

A too sensitive observer might well be a little puzzled at seeing such a degree of domestic freedom among the visitors to the august capital. In particular, he could hardly fail to notice the absence of everything like reverential quiet in the behaviour of most of these Northern tourists. Their exceedingly free and even jaunty bearing would probably strike such a one as better fitted for their own sandy shores than for the majestic surroundings of the ancient metropolis. And the want of harmony in this mode of behaviour would be rendered still more conspicuous by its unlikeness to the native style of the modern Romans. In contrast to the more demonstrative Neapolitan, the citizen of Rome commonly maintains a considerable degree of quiet dignity. Although during the brief reign of King Pasquale he shows himself capable of all the harmless riotings of mirth, he is for the most part moderate and self-controlling, even in his amusements. This attribute is strikingly illustrated in the orderly quiet of the vast and dense crowds who yearly collect to witness the illumination of the ruins on the *festa natale* of ancient Rome. In like manner, during their promenades in the Corso or on the Pincio the Roman *bourgeoisie* have a slowness of pace and stillness of bearing which inclines one to think that they are conscious of the dignity of their citizenship. In what sharp, not to say harsh, contrast to this graceful repose the bearing of tourists presents itself, is known probably to every appreciative visitor to the Italian capital. Nor is it to be doubted that the Romans themselves are fully alive to the incongruity. Indeed one may easily overhear quiet remarks, called forth now by the boisterous talk of a group of Germans, now by the stiff lines of bulky English skirts, which show that Roman ladies, however little intellectual in other respects, are fully competent to criticize some of the *gaucheries* of their lady visitors. The reflection "Sono Inglesi!" "Sono Tedesche!" seems to these quiet observers a ready solvent to the momentary wonder excited by much that they witness. No doubt it would be impossible for our energetic pedestrian ladies to assume the easy grace which is so closely linked with the indolent habits of the South. Nor could the sense of unfitness in a fastidious observer be wholly removed so long as some of the Teutonic languages, as at present spoken, oppose so many guttural and nasal elements to the mellifluous tones of the Italian. Still one might not unreasonably perhaps look for some slight recognition of this artistic inappropriateness among the self-styled cultivated who flock from North and West to the great centre of æsthetic life. If only English girls were a little less obtrusive in their jollity, or German Fräuleins less noisy in their enthusiasm, or American ladies of a less fierce and keenly critical attitude, modern Rome would probably be far more delightful to every worshipper of "sweetness and light." As it is, he is very apt to find his ears assailed with extraneous and unmusical speech, and he may even discover that he is destined to encounter at more than one venerable historical spot the noisy and too discriminating troops of English travellers who avail themselves of the wing of Mr. Cook. Amid these discordant surroundings he will not improbably regret that he was not privileged to visit Rome before the institution of Italian railways and excursion tickets. He will draw perhaps a melancholy comfort from trying to reconstruct in fancy the sublime monuments of the city before they were overrun by troops of the *nouveaux riches* from the new world, when the few English visitors to be seen might be presumed to have culture, at least that part of it that belongs to good breeding, and when the still smaller group of German sojourners were men who had been impelled towards the city by some of that passion for nature and art which breathes in the *Elegien* of Goethe or the *Reisebriefe* of Mendelssohn.

While in these ways the brusqueness of the North and the absence of refined culture frequently produce in Rome odd effects of contrast between the tourist and his environment, there are other amusing aspects of stranger life which seem due to quite opposite causes. The presence of so many of the ruder sort of travellers appears, not unnaturally, to drive the few more sensitive strangers to an opposite extreme of behaviour. That is to say, they seek to isolate themselves as much as possible from the tumult of fugitive tourists, and to assimilate themselves to the native style of manners. Thus English or American women who come to Rome for the sake of its art frequently seek to adopt the Italian language, and pride themselves perhaps on effecting this with all the ease and grace of a Roman woman. In like manner they assume the long flowing dress of the native population, and abandon in consequence the energetic mode of English locomotion. Very likely they affect a disparaging tone towards everything not Roman, and while they are ever ready to expatiate on Roman politics, art, and archæology, cannot disguise their contempt for the vulgar and graceless aspects of commercial England. Sometimes this process of readjustment to new conditions of life is incomplete, and then the effect is very curious. For example, the semi-Romanized English lady commonly accepts a compromise between the English and the Continental Sunday. She may be seen on a Sunday morning issuing in all her accustomed brilliancy of costume from the Porta del Popolo, on her way to the English church; but in the afternoon she does not hesitate to drive round the gardens of the Pincio, and draw up with the rest of the equipages before the military band.

Still more curious than these anomalies of imperfect re-adapta-

tion to change of habitat are the excessive demonstrations of reverent sentiment into which this same class of visitors is so often betrayed. For not unfrequently the English or American lady who adopts Rome as her home very far surpasses the Italians themselves in magnifying "res Romanas." Indeed it is hardly to be wondered at that in a city so rich in antique splendour and artistic creation a fashion of pretty æsthetic talk should spring up among the foreign society which ostensibly assembles there in the interests of culture. Only it seems a pity that this talk should often be a pure affectation not thick enough to veil the real ignorance beneath. And, being so often nothing but a fashion, it is exceedingly likely to be paraded on every occasion. One can scarcely pass through the galleries of the Vatican without overhearing the same kind of silly counterfeit of criticism to which every intelligent frequenter of Burlington House has to accustom himself. The mania for studying art at Rome is at times almost terrible to witness. We have been more than once quite abashed by the sight of young ladies, scarcely arrived at their teens, solemnly conning the bulky volumes of Hare before an antique marble or in the murky vaults of a subterranean basilica. At other times the outpourings of enthusiasm are apt to become exceedingly touching. In the vast oval of the Colosseum, for example, one is pretty certain to see on a fair moonlight evening some ardent German ladies with souls *ganz vertieft* in the long softened vista of imposing arches. With a quite painful violence of gushing emotion they expatiate on every poetic element of the scene, and threaten to exhaust their wealthy language of every tender and revering epithet. American ladies are probably even more skilful in assuming these pretty sentimentalities. It is really too affecting to see a trio of fair young girls, impatient of male escort, listening to the choral music in St. Peter's, or watching a sunset from the Pincio. They pose themselves with a seeming artlessness in the most graceful attitudes, and betray by every variety of soft movement the successive influences of the hour. It obviously requires a mind of singular hardness to detect underneath so charming an exhibition of natural sentiment the element of studied publicity so prettily disguised.

One form of these professions of sentiment in Rome deserves perhaps a special notice. We refer to the very common display of religious reverence, chiefly on the part of English visitors. The German is not much given to the externals of religion at any time, and the American for the most part shares a little of Mr. Spurgeon's Puritan horror at Popish rites. But to the average English mind the proximity of Vatican and Pope, colleges and imposing churches, seems to possess a peculiar fascination. It is possible, indeed, that practices with which they are not quite unfamiliar at home may have prepared some of our English matrons and maidens for the form of ritual existing at Rome. However this may be, it seems clear that a large number of English visitors pay an ostentatious tribute of respect to the religious formalities of the place. This may be occasionally seen in the interior of the churches, where the impressible Englishwoman easily slides into the prevailing attitude of the Catholic worshippers. Some excess in this direction is certainly better than the offensive display of irreverence which was, and still is, the fashion with too many Protestant visitors to Rome; but perhaps the reaction against a very odious form of vulgarity is sometimes carried a little too far. A still more conspicuous instance of this conformity to the *religio loci* is to be found in the well acknowledged custom among a class of Protestant visitors, chiefly female, of presenting themselves to the Pope in act of dutiful reverence. During the late season one rarely issued from the rooms of the Vatican at the closing hour of eleven without meeting a number of ladies elegantly attired in black veils and rosaries (conveniently sold at the entrance of the palace) proceeding to the paternal reception. Their fair hair and brilliant complexions pretty certainly betray the nationality of a large proportion of these quasi-faithful. The idea of kneeling to so distinguished and venerable a personage in a highly effective costume is naturally grateful to the sentimental mind, and Englishwomen do not require much besides a little opportunity for personal display in any new law of fashion they are willing to submit to. Were they a little more reflecting they might recognize the ironical aspect of the august Papa having to solace himself with these fugitive reverences from pretty heretics, while the vast majority of his nominal children among the Italians themselves do not care to disguise their indifference.

These are only a few of the modes in which the Northern tourist renders himself quaintly conspicuous in Rome. Some, through lack of sentiment, strike an observer as rude and harsh amid their polished surroundings. Others, having too much sentiment and proportionately less common sense, run into ridiculous excesses of another kind. A man who really wants to see and to enjoy Rome, its classic antiquities and its picturesque modern life, might very likely wish both these extraneous and somewhat discordant elements removed from the picture. Yet, if he be deeply interested as well in the study of human character, he will scarcely be inclined to reject so good an opportunity of noting the endless varieties of race and temperament as they are here exhibited in such sharp contrast, and of smiling at the numerous grotesque caricatures which appear to accompany almost every worthy activity of the human mind.

THE PLEA OF CONSCIENCE.

WE have commented elsewhere on Mr. Forster's proposed amendment of the Education Act, but there is one point in the Dissenting agitation against it to which it may be worth while to call attention here, as it has an interest of its own over and above the particular occasion which suggests it. The too famous 25th Clause is to be so far modified that henceforth payments for indigent children are not to be made by the School Boards to the schools, Denominational or other, which they attend, but by the Poor Law Guardians to those parents who are unable to pay for the education of their children, and who may then send them to any duly certified school they prefer. And these payments, we may observe parenthetically, so far from including any extra remuneration for religious teaching, are to be a halfpenny below the lowest average of weekly payment in poor schools. However, it is obvious enough that a good deal of the money so paid is likely to find its way to the pockets of the managers of Church of England and Roman Catholic schools, for the simple reason that a large number of the parents requiring the proffered aid happen to belong to one or other of those communions. This is the intolerable grievance to the Nonconformist conscience. Yet it is equally obvious that, if there is to be any compulsion in the matter, direct or indirect—and to that the Dissenters are so far from objecting that Mr. Dixon insists on its being made universal—the only alternative is to send all children whose education is paid out of the rates to purely secular schools, whether their parents approve of it or not. On a *primâ facie* view of the case the latter arrangement does seem to involve a serious interference with freedom of conscience, and we can easily understand the indignant resistance to its adoption. For unless the State undertakes to decide, either by its own unaided judgment or with the help of an infallible Church, which is the true religion, and to enforce conformity on all its subjects, one hardly sees how it can consistently compel them to bring up their children in any particular form of religion or irreligion to which they conscientiously object. But the Dissenting conscience, like the heart of kings, is unsearchable, though, as we shall presently have occasion to point out, it is by no means destitute of precedents, both in ancient and modern times. There is a story told of Cardinal Beaton, when Archbishop of Glasgow, that on occasion of a feud between the Hamiltons and Douglases, he had put on armour under his episcopal robes, intending to take a leading part in a treacherous attack by the former on the latter clan. Bishop Douglas of Dunkeld, who had received some intimation of the design, was sent to the Archbishop to remonstrate and urge him to exert his influence as a Churchman in the cause of peace. "I assure you *on my conscience*," replied his Grace—and he emphasized the assurance by laying his hand on his heart—"that I am innocent in this matter." The gesture was an imprudent one, and elicited the prompt retort, "Methinks, my Lord, your Grace's conscience *clatters*." Our Nonconformist friends are probably as little in the habit of wearing steel breastplates as of donning episcopal rochets, but we cannot help thinking that their consciences, like Cardinal Beaton's, are apt to "clatter," in a manner at once noisy and indicative rather of attack than of defence. When they insisted on a conscience clause for the protection of Dissenting children at Church schools, they deserved and obtained the support of all reasonable men. But the demand for a conscience clause to prevent Church of England children from being educated in Church of England schools is not equally intelligible. It has just the same sort of reason or unreason as the pertinacious opposition of a certain section of Protestant agitators to the payment of Roman Catholic prison chaplains, and in either case it is the merest sophistry to obtrude the vexed question of religious endowments, which has really nothing at all to do with the matter. No doubt, in the first instance a certain infinitesimal percentage of the public money goes into the hands of Roman Catholic clergymen, and in the second into the hands of Roman Catholic and Anglican school-teachers, just as a certain percentage of public money expended on charitable relief finds its way eventually into the hands of Anglican or Roman Catholic butchers and bakers. If mental, like bodily, food is to be considered a necessary of life—and modern legislation is rapidly moving in that direction—this must inevitably follow, unless certain forms of religion, such as the Roman Catholic, are to be virtually proscribed altogether. We are quite aware that there are those who would frankly accept that conclusion, and therefore we said just now that the Dissenting claim of freedom of conscience, peculiar as it is, and exclusively directed against the freedom of other people's consciences, is not unprecedented, and may even appeal to high living authorities. It is on that account only that it challenges a theoretical interest to which intrinsically, and in the sphere of practical politics, it certainly cannot pretend.

The apostles of the Education League would perhaps be very much surprised to learn that, in their pious zeal against Roman Catholic schooling, they are but emulating the most objectionable antecedents of the religion they are so anxious to proscribe. The difference between preventing parents from educating their children in their own faith and preventing them from professing and practising it themselves is one of degree, not of kind. No doubt there are many intermediate stages between Mr. Dixon and Torquemada, but the principle is the same, and the soundest Protestants, like Calvin and Cranmer, have been quite as ready to burn their erring brothers for conscience sake as the most benighted believers in Transubstantiation and the Seven

Sacraments. But unfortunately our conscientious Dissenters need not appeal to historical examples of intolerance, whether Papist or Protestant, in vindicating their principles. It is too true that some of the leading writers of the day, men who would be popularly identified with the extreme Liberal school, have shown, as it has been not unjustly said, that "the two things they hate most are civil and religious liberty." We are not now referring to the very liberal gentleman who has avowed his preference for leaving our young street Arabs uneducated to having them educated in Denominational schools. But we will take examples entirely removed from this particular controversy, though for that very reason the more conspicuously illustrating it. Thus one writer, whom we have often had occasion to criticize, but whose rare mastery of his mother-tongue would alone secure him a hearing, informs us that "true liberty means the being governed by just laws," by whomsoever made, and that, as "the consent of man was not asked when he was born into the world, and will not be asked when his time comes to die, as little has his consent to do with the laws which, while he lives, he is bound to obey." The analogy strikes one as failing in one little point, for the issues of life and death are usually believed, and apparently believed by this author, to rest in the hands of a Power at once Omniscient and All-good, and the most enthusiastic partisan, whether of monarchical or democratic institutions, would hardly venture to claim as much for any form of human government. No doubt the just laws in obedience to which lies the true secret of liberty are explained to mean "laws in harmony with the will of the Master and Maker of the world." But how, except under a theocracy, is this harmony to be surely ascertained? Our author, to do *him* justice, is ready with a reply. "The superior part," he tells us, "has a natural right to govern, the inferior part has a natural right to be governed; and a rude but adequate test of superiority and inferiority is provided in the *relative strength* of the different orders of human beings." And he adds, with a happy *naïveté*, "there is no disputing against strength." In other words, might is right, and the same principle which leads Mr. Carlyle to canonize Frederick the Great and Mr. Froude to canonize Henry VIII.—two of the most unscrupulous tyrants the world has ever seen—is no doubt abundantly sufficient to cover Mr. Dixon's conscientious plea for keeping Roman Catholic children out of Roman Catholic schools. Indeed Mr. Froude will expressly tell him that "the mass it was not legitimate only, but necessary, to interdict in Ireland"; just as when the unfortunate Mary Stuart introduced the old worship into the Chapel of Holyrood, all the Presbyterian pulpits in Edinburgh rang with the angry cry, "Shall the idol, the mass, be set up again in Scotland? *It shall not.*" The mistake was that, through the culpable weakness of the English Government, the mass and its ministers were not thoroughly exterminated in Ireland. All Popish education was, however, rigorously suppressed, and our conscientious Leaguers may be interested to learn, on the same high authority already quoted, that the education in the Charter Schools, where Catholic children were taught the Bible and the three R's, and sedulously removed from their relations, "to avoid the danger of their relapsing into Popery," was "probably the very best that has ever been devised in modern times." To be sure, some of the money for supporting these model schools must have come out of the pockets of the Catholic taxpayers whose children were being proselytized in them. But still the education, though exceedingly anti-Catholic, was more secular than denominational, so nobody's conscience could be injured. This, at all events, according to Mr. Froude, is the true idea of liberty, which does not consist in "the sacred rights of conscience to choose its own religion, and in its own wisdom to believe in whatever theories of divine things it happens to prefer." But then whose wisdom is to decide?

We turn to a very different writer from Mr. Froude, but, like him, a high authority with the so-called Liberal press, and he informs us that liberty is not "a simple principle," but liberty and compulsion are good or bad according to circumstances. He does not indeed adopt Mr. Froude's "rude but adequate test" of rightful authority, and the upshot of the theory is therefore somewhat less clear. We are, however, distinctly told that compulsion is good when the end is good and the means employed for attaining it are not either inadequate or such as involve a greater cost than it is worth. On which triple rule, two, if not three, questions of considerable difficulty at once suggest themselves. Even supposing that we can be certain beforehand of the adequacy of the means, which the long history of religious persecutions shows to be almost impossible, by what standard is the goodness of the end, whether absolutely or relatively to the inconveniences incurred in attaining it, to be measured? Would the extermination of Popery in Ireland, assuming it to be in itself desirable, have been too dearly purchased by a consistent and persevering application of the Cromwellian policy, whose abandonment Mr. Froude so bitterly deplores? Or was the Catholic orthodoxy of Spain on an opposite assumption too dearly purchased by the horrors of the Inquisition? It is obvious that if once the three rules of legitimate compulsion are admitted as stated above, these questions will be differently answered according to our estimate of the facts. There is a good deal to be said for Mr. Froude, and a good deal to be said for Torquemada, though it is quite conceivable that an honest advocate of the principle of compulsion—that is, of persecution—might still come to the conclusion that the price was too high, or the result insufficiently secured. What is certain is that the principle itself can only be consistently maintained by an Ultramontane, and we were therefore as little surprised to find it cordially accepted the other day in a review of the very essay to which we are referring in the *Tablet* as to find the essayist himself expressly admitting that he thinks the Ultramontane view of the relations between Church and State the true one. He is indeed so far conscious of the weak point of his own system that he is obliged to be content with maintaining the obligation of Governments to act on such moral and religious principles "as they may from time to time regard as *most likely* to be true." The qualification is a very serious one. To burn people for denying what, like the old inquisitors, you feel quite sure is true, seems to us sufficiently barbarous; but to burn or otherwise coerce them into accepting principles which you for the time regard as "most likely to be true," is a refinement of cruelty as odious as it is irrational. Yet it is only another, and very obvious, application of the same principle to prohibit or thwart the education of children in doctrines which you deem most likely to be false, but which their parents, whose consciences may be quite as sensitive on the subject, think likely or certain to be true. The plea of conscience, when urged in defence of personal rights and convictions, is always to be listened to with respect; but when it is put forward with a view of curtailing the rights and liberty of others, it must ever have a most suspicious sound, whether in the mouth of a mediæval inquisitor or a modern Liberal. For it has been the standing plea of persecutors in every age.

VERY LITTLE STORIES FOR VERY LITTLE GIRLS.

THE supposed necessity of combining sound advice with amusement has induced a lady to put forth a small volume of precepts for the behaviour of girls, accompanied with shocking examples of the consequences of naughtiness. We find in turning over the pages of this book a story of Alpine travel which will surely be interesting at the commencement of another tourists' season. The story is intended to enforce on young ladies the duty of punctuality, and before beginning it the author mentions some illustrious characters by whom, as she says, this duty was conspicuously practised. "The well-known exclamation of Lord Nelson was, that he owed all his success in life to his habit of punctuality." It is perhaps our misfortune or fault never to have heard before of this well-known exclamation of Lord Nelson. But when the author adds Wellington to her list of great men noted for punctuality, we must mention that we remember to have read that Wellington in the Peninsula would sometimes lie in bed late in the morning and ride hard to make up for lost time. Another celebrated general, Luxemburg, was, we believe, actually in bed when the battle of Steenkirke, in which he defeated King William III., began. However, let us leave these departed warriors in peace, and proceed to the example of Kate Fortescue, who caused her father's death by coming down late to breakfast. This young lady, like several others whom we have had the pleasure to meet in these pages, had been educated at an imaginary school of which Madame Recherchée was the principal. As the only surviving child of wealthy parents, she had been indulged, but not spoiled. She was clever and "particularly sensible," but she had an inveterate habit of procrastination. She had won various prizes easily; but there was a prize for general good conduct which, through her unfortunate propensity for being too late, she had always missed. Her unpunctuality became at length "a real cause for anxiety" to her parents, who made themselves, as we think, needlessly unhappy on this account. If Kate was pretty as well as clever and rich, her parents might easily have found her a husband who would have taken her with all her faults and been contented with his bargain. Perhaps she would have adapted her habits to his, and perhaps he would have adapted his habits to hers; and at any rate a pretty face and a good fortune might have compensated for sometimes having to wait dinner. It is something to be sure of always having dinner throughout life, and the certainty of its appearance might make up for occasional delay. The author will doubtless say that these are vicious principles, and that we are sapping the foundations of morality, of which punctuality is an important part. But to return to Kate, we read that scoldings and task-lessons, rewards and remonstrances, seemed alike of no avail, until at length Kate's mamma and Madame Recherchée contrived an ingenious method of correcting this dangerous habit of unpunctuality. Kate was very anxious to leave school at Midsummer, and it was determined that she should be told that she must remain till Christmas unless she gained this prize for good conduct which she had missed so frequently. The father hesitated; but "he was too much of a man of the world not to be aware what a serious evil unpunctuality is," and so he consented to his wife's plan, adding that if his daughter got the prize, he would add to it a watch and chain. Another man of the world might perhaps think that it was useless to attempt to keep a daughter at school until she could be turned out a faultless example of all virtues and accomplishments. However, Kate started on the race for this treble prize, and her schoolfellows for the most part good-naturedly assisted her to win it. But nevertheless she was beaten on the post by a head; or, in other words, she came down late for prayers on the last morning, and the prize was adjudged to Miss Jones, who, we feel certain, must have been a most objectionable young person, deserving, if she had been a boy, to have her head punched as a sneak. However, Kate saw with disap-

pointment and regret the prize adjudged to what we must be permitted to call the insufferable regularity of Miss Jones's habits; and it would have been fortunate, says the author, if these feelings had been allowed to sink deep into her heart. The author would have kept a grown-up girl at school learning child's lessons for half a year because she had come down late for prayers one morning. It is needless to say that the blind partiality of Mr. Fortescue for his daughter interfered to relax the bonds of discipline and contemn the principles of virtue. He, with a man's insensibility to small distinctions, persuaded his wife that so very nearly winning the prize was as good as quite winning it; so Kate left school at Midsummer, and had her watch and chain, and was taken by her parents on a Continental tour.

And now begins the tragic end of Kate's story. They had added an aunt and a cousin of Kate's to the party, and they had arrived at Martigny, and projected a visit to the hospice of St. Bernard. They engaged two guides and a mule for each of the four ladies, and Mr. Fortescue undertook to walk. They were to breakfast at half-past six, and start at seven, and Mr. Fortescue overnight begged his daughter to be ready in good time. She declared her intention to be first downstairs, but unfortunately when the others assembled for breakfast she was still in bed fast asleep. Then ensued various difficulties, which the combined efforts of Kate and her cousin Mary vainly strove to overcome. Kate's hair was tangled, a string broke, her "things" would not go into her portmanteau—which is a way "things" have on such occasions—and her travelling dress was in disrepair. It took these two young ladies an hour and a quarter to get one of them dressed and packed, and perhaps if the opinions of men were taken, they would say that slowness in getting up was a worse fault than lying in bed. We might ask why mamma and aunt, to say nothing of the chambermaid, were not summoned to give assistance. Even papa could have jumped upon the "things," and thus improved his appetite for breakfast. At last the party was ready to start, but they now discovered that one of the guides had "consented to engage himself to some Americans." Another guide had to be fetched from a distance, and the party finally started at half-past nine. It occurs to us that papa, if he could not be useful upstairs, might at least have occupied himself in keeping the guide to his engagement or finding another promptly on the breach of it. The journey proceeded for some time as usual. But in the afternoon a storm began to brew, and Mr. Fortescue, whose wind, like that of some other papas in Switzerland, was shorter than his purse, found the increased speed on a continually ascending pathway begin to tell upon him considerably. Kate, who was "a fine strong girl and a capital walker," gave up her mule for a time to her father, and so "got on famously." But their route lay at the edge of a precipice, as routes frequently do in Switzerland, and the guides said it was not a fit place for a girl to walk, "for if the wind caught any portion of her dress, she would inevitably be lost." The simple expedient of a rope, or even two or three handkerchiefs joined together, does not seem to have occurred to any of the party. Then came snow and thunder; a bridge was swept away by a torrent, and the party had to go five miles round. Mr. Fortescue, "a large, heavily-made man," could now neither walk nor sit upon a mule, so they left him and his wife behind, pushed on for the hospice, and sent assistance as soon as possible. When it arrived the wife was insensible and the husband was dead. We must pause here to ask why he did not take a drop of brandy? They must be very little girls who can be imposed upon by the very little artifice of this "bogie" story. It is monstrously unfair to lay the blame of the father's death upon the daughter, and we emphatically protest against "a fine strong girl and a capital walker" being compelled to stagger through life under an undeserved burden of remorse. It is obvious that, if the hour of starting was too late, the party could have stayed where they were, with no more consequence than a dull day at Martigny. Even the severe justice administered at Madame Recherchée's establishment for young ladies might have been satisfied by compelling Kate to pay for the guide and mules out of her pocket-money. On no principle of justice known to man could Kate be held responsible because her father over-estimated his power of walking, or omitted to fill his brandy-flask before starting.

It really is a serious thing to contemplate the possibility of the education of girls being entrusted to a lady who is capable of conducting this story of Kate Fortescue through all its trivial details to its tragic close. Heartfelt sorrow came too late. Earnest reformation came too late. Lifelong repentance came too late. The inexpiable offence was that Kate took another nap instead of getting up when called. This melancholy chapter is headed by a familiar proverb which, like some other proverbs, is the silliness of many and the words of one. Through the want of a nail the shoe was lost, and then the horse, the rider, and the kingdom. But where was the Mr. Cardwell of the period to take care that another horse should be forthcoming when the first broke down? Perhaps the Mr. Lowe of the period struck that second horse out of the estimates. There is another equally silly story in the same book about a young lady, "Coulon's favourite pupil," who desired to display her grace as a dancer in blue satin boots at a garden party. It seems to be the function of papa in all these stories to make remarks which, even if sensible, which they seldom are, receive from mamma and daughter only contempt. In this instance papa's suggestion of thick boots and warnings of damp grass were disregarded. Ella had learned "*an exquisite pas seul for Ella*," very like what one sees at the Opera, only altered a little for private dancing, and intended to perform it on this occasion. The author seems to have forgotten that grass, damp or dry, would be wholly unsuitable for the display of any quality in the dancer except strength and perseverance. However, let the march of tragedy proceed. The elders occupied the marquee; the juveniles danced upon the lawn. We are not informed what became of the exquisite *pas seul*, but the blue satin boots got wet through, as any possible boots would have done by dancing on a damp lawn, and Ella caught cold, which caused consumption and death. This author, with her "words in season" for spring-time, reminds us that we once heard of a person, in greasy black clothes and a white tie, who got into an omnibus and handed to his fellow-travellers a tract bearing the inspiriting title, "Are you aware that you are going to Hell?" However, we observe that all the stories are not equally dismal, and some of the remarks may be practically useful. Dancing, we are glad to hear, is an innocent recreation, and youth is "decidedly" the right season for its enjoyment; but some girls appear to think that the sole cause for which elderly ladies are permitted to live is "to chaperon them to these Terpsichorean festivities." Mammas must indeed take their daughters to parties as inevitably as this author must use big words where little words would adequately express her meaning. But it is selfish in a girl to forget that mamma is tired and sleepy, and also, if the girl is pretty, to monopolize all the partners. It seems to us that a girl can hardly be blamed for dancing when she is asked. When a book of very little stories is written for very little boys, perhaps it will inculcate, by precept and example, the duty of dancing with plain girls.

STONYHURST.

THE accidental connexion of Stonyhurst College with a remarkable law-suit and criminal trial has procured for that institution a sort of spurious fame. It is possible that Stonyhurst may continue to be chiefly known to newspaper readers as the place where Roger Tichborne was educated, and many persons may be disposed to take an interest in it on that ground who would not have given two thoughts to it on any other. Yet it is a place which has a genuine interest and importance of its own. It has not certainly a very ancient or brilliant history, but it is one of the chief educational establishments of the Jesuits, who exercise a controlling influence over the education of an important section of our own countrymen. Both priests and laymen are educated at Stonyhurst, and the laymen belong, for the most part, to an influential class. In its way Stonyhurst is quite as important as Eton or Rugby, and it is worth while therefore to know something about its internal organization and methods of work. The evidence which has been given in the course of the Tichborne case, and a local History of the College which was published two or three years ago, furnish us with some information on these points, which we will try to put together.

The origin of Stonyhurst as a Jesuit establishment dates only from the close of the last century. In 1762 the Jesuit College at St. Omer was broken up and dispersed, and the fathers fled with their pupils and such goods as they could carry with them to Liège. But there they found but a brief respite from trouble. The revolutionary wave quickly followed them, and in 1794 they were once more swept out of house and home and cast loose upon the world. They turned to England as their last hope of refuge. It seemed as if the French armies were destined to overrun the Continent, and wherever they went they were known to be ruthless in their hostility to all religious corporations, and especially to the Jesuits. The somewhat contemptuous indifference of the English people promised the fugitives a safer asylum, and the fact that they had just been the victims of revolutionary persecution might almost be expected to tell in their favour. Mr. Thomas Weld, the head of a well-known Roman Catholic family, whose son was afterwards a cardinal, offered them the use of an old mansion in Lancashire, which they gladly accepted. And this was their introduction to Stonyhurst. They brought thither the small remnant of their once flourishing seminary, and in the course of time it has grown to be one of the largest and most important of the Jesuit colleges—certainly the most important in this country. The building in which the Fathers thus found shelter was of ancient date, and in rather a decayed condition. It was the family mansion of the Sherburns, who had lived there almost from time immemorial, but it had been restored at intervals according to the means and inclinations of the various possessors. Sir Richard de Sherburn appears to have started the process of restoration at the end of the sixteenth century. Mr. Baines, in his History of Lancashire, speaks of Sir Richard as a staunch Roman Catholic, who was nevertheless in great favour with the Queen, and as a mark of this favour enjoyed the privilege of having his chapel and priest at Stonyhurst. His name, however, has been found in the list of Commissioners for the dissolution of monasteries, and during Elizabeth's reign he was one of the Ecclesiastical Commissioners for the North who were charged, among other things, with preserving the Church from the contamination of Popery. He also took a prominent part about the Armada time in defending the Crown from "Popish conspiracies" and the "intolerance and insolence" of Rome. It would appear that these circumstances have rather detracted from the respect with which Sir Richard's memory is regarded at Stonyhurst, and there is a disposition to regard the story of *his*

"chapel and priest" as a myth. Yet he was probably a fair specimen of the Roman Catholic gentleman of the period, who was an Englishman first and a Roman Catholic afterwards, and who had a strong objection to England being made a Spanish province merely to please the Pope. In 1754 the house and estates passed into the hands of the Welds of Lulworth in Dorsetshire, a branch of the Sherburn family. The place was at first assigned to the Jesuits for a peppercorn rent, but afterwards Mr. Weld made them a gift of a considerable part of the property. The building, to which additions have been made in recent years, presents the familiar aspect of an old Tudor mansion, with a massive castellated gateway and towers rising in the midst of trees and meadows, and approached by a fine avenue. The surrounding country is rich and picturesque. It is well wooded and broken up into romantic variety by hill and dale, and is watered by the Hodder and the Ribble, streams which are more romantic and agreeable in their middle course than when they get nearer the sea. The College itself stands on an elevated plateau at a good height above the sea, and in a fresh, open, breezy situation. It is the very ideal of an old English mansion, and, though built at different periods, and clumsy and awkward in parts, presents as a whole a dignified and impressive appearance.

Perhaps the best way to obtain a general idea of the place is to follow our local guide through some of the principal rooms. First we take a peep into the room where the students learn to box, fence, and to practise other exercises of a similar kind. It is well supplied with gloves, sword-sticks, dumb-bells, Indian clubs, &c., and it would seem that there is every facility for students becoming expert in the use of those implements. There are a couple of music rooms, filled with pianos separated by partitions of glass and wood, so that the simultaneous performers may not utterly confound each other. Along the adjoining corridor there are seven or eight school-rooms, fitted up in the usual way, and three play-rooms, hung round with paintings and engravings, and, at the end, a large school-room and a drawing-class-room. Further on we reach the covered playground—a large, airy, glass-roofed hall, in which foot-ball, hand-ball, cricket, and other games are played in bad weather. By an arrangement of nets fastened in parallel lines from above, and firmly secured below, several games of cricket can be carried on at the same time. At the end of the playground is a gymnasium. Next we come to bath-rooms, and workshops for the shoemakers, nine or ten of whom are attached to the College and kept in constant work. The importance of being well shod appears to be one of the first principles of the establishment, and the Father who has charge of the younger children attributes their good health to their invariably keeping their feet dry. Three rooms fitted up with scientific apparatus of all kinds are used for lectures and experiments. The lavatory, large, clean, and orderly, and the room in which the students breakfast and sup, are next passed. The refectory of the community, where the Fathers sit at table, is a commodious and rather grave-looking apartment, with plain, old-fashioned furniture, while that of the "philosophers" is fitted up in a brighter and more ornamental fashion. The students' dining-room is the old dining-room of the Sherburns—a grand old hall of ample dimensions, with a lofty roof decorated with embossed squares and diamonds and relieved with colours, and a floor of white marble. A gallery of dark oak, studded with projecting antlers, and a huge arched fireplace big enough for the roasting of an ox, complete the baronial aspect of the hall. An old oak table is pointed out as having been slept upon by Oliver Cromwell. Cromwell was certainly once at Stonyhurst, for he spent a night there in 1641, after holding a council of war on Hodder Old Bridge, and next day moved southwards; but it is scarcely possible that he should have been unable to procure a more comfortable couch. The general study-room, and the Academy-room, in which the periodical examinations take place, are also large and lofty. At the upper end of the latter, and separated by folding-doors, is the theatre, a semi-circular gallery, capable of accommodating between three and four hundred persons. When performances are to be given, the folding-doors are closed, and a stage is erected on the inner side, facing the audience. Going onwards, we reach the general dormitories. They seem to run in rows in all directions in a perfect maze. Each sleeping place is separated from the next by a wooden partition with curtains at the front and open at the top. There is of course only one bed in each compartment, and every boy has his own bed. The boys are encouraged to decorate their little sleeping places with crucifixes, sacred pictures, &c. Each bed is numbered, so that it may be found at once. Three prefects are posted in charge of the sleepers, one at each end, and one in the centre. At night the strictest discipline is enforced; no talking is allowed, and when once the students close their curtains absolute silence must prevail. As might be supposed, there is no lack of facilities for devotional exercises. There is the Chapel of the Angels, where mass is said every morning; the Sodality Chapel, rich with gold and colours, which is used at intervals by a certain number of students, between fifty and sixty, while saying their offices; and the Community Chapel, with room for a couple of hundred persons, where the students attend service every morning. There is also a church which is open to the public as well as to students. Religious figures and emblems are scattered throughout the building, and pictures are found in all parts of it, in the rooms and corridors, and along the staircases. The hospital corridor, it might perhaps be thought, has sufficiently depressing associations of its own without being furnished with a series of vivid illustrations of the principal forms of torture to which Catholics who preferred the Pope to the King were subjected in Henry VIII.'s time, including thumb-pulling, pricking, racking, hanging, burning, stoning, &c. The museum is a singularly miscellaneous collection, comprising ancient weapons, illuminated manuscripts, black-letter books, Roman mosaics, Court dresses, bear-skins, carved bamboos, and all sorts of odds and ends. Among other things, visitors are shown the seals, pouncet-box, skull-cap, and old black felt hat of Sir Thomas More; a manuscript copy of the Gospel of St. John said to be of the seventh century, and to have been found in the tomb of St. Cuthbert at Durham; Cardinal York's napkin, bearing in the centre the royal arms of England; clasps cut from French officers' cloaks at Waterloo; bullets extracted from Irish soldiers after the storming of Sebastopol; a fragment of Sir Isaac Newton's apple-tree; silver cups presented to several of the Fathers for short-horn bulls, and "winter feeding the greatest number of cattle on turnips and straw"; the Prayer-book of Mary, Queen of Scots, and a great many other oddly mixed articles of more or less curiosity. In the library, along with other treasures, is a complete set of "Bollandists," containing the lives of about thirty thousand saints. The vestment-room contains a magnificent collection of gorgeous robes, stiff with golden embroidery, and rough with precious stones; and the most precious possessions of the community—the relics—are also kept in the same chamber. There privileged visitors may see one of the eyes of Father Oldcorn, who was put to death in the reign of Elizabeth; the thumb of the Rev. Robert Sutton, who also suffered about the same time; some hairs from the head of St. Francis Xavier, and the cord by which Father Campian was bound at his execution.

It will be seen that the educational system of Stonyhurst is distinctly religious. Religious pictures and emblems arrest attention on every side, and the religious services of the College are frequent and pretty strictly enforced. Another important part of the system is the personal supervision of the students. They are closely watched, and a constant effort is made, not merely to instruct them in different kinds of knowledge, but to discipline them in manners and ideas. One or two characteristic touches of Jesuit policy came out in the recent evidence. The sudden and absolute surrender of the prohibition against smoking in Roger Tichborne's time, when it was found impossible to prevent the philosophers from puffing their pipes in some part or other of the grounds, may perhaps recall some bitter passages in Pascal as to the cheerful acquiescence of the Order in vices or irregularities which they found to be too strong for them. The revision of the plays which the students act is another curious trait. The text is carefully gone over beforehand, and everything referring to love, or thought to be of an exciting or disturbing character for young men, is struck out. The *dramatis personæ* are sometimes rudely curtailed by all the female characters being cut out, which makes it necessary that all the male characters who are enamoured of them should be cut out too. If the acting or reading of plays were forbidden, or if special plays were compiled conveying such views of life as the Fathers might think desirable, nobody would be surprised. But there is something very odd in ordinary plays being chosen in order to be doctored in this violent manner, under the impression that the students will not detect the changes which have been made. We gather from the local guide that great attention is paid to the physical comfort of the students, and that a good deal of pains is taken to amuse them, and generally to make things pleasant. Field sports occupy a prominent place in the course of training, as in other English schools, and it would certainly seem that the discipline of study in other things is far from being severe. The philosophers are the parlour boarders of the establishment, with private rooms, a snug dining-room, and a luxurious drawing-room of their own, and they are left pretty much to themselves. If they choose to learn, they will be taught; if they don't choose, they have only to let it alone. The ordinary students probably enjoy less freedom in this respect, but there is no reason to suppose that they are overworked. The odd ignorance of some of the Stonyhurst men who have appeared in the witness-box has had a tendency to create a prejudice against the educational efficiency of the establishment, but it may be doubted whether an equal number of not less ignorant Eton men could not be found without much difficulty. On the whole, however, it may perhaps be assumed that, as a rule, Jesuit fathers are more anxious to turn out good Catholics than deep scholars.

MR. PLIMSOLL AND THE *LIVONIA*.

THE first of the actions against Mr. Plimsoll has resulted in a qualified victory for the defendant. The Court of Queen's Bench held that Mr. Plimsoll had undoubtedly made improper and unwarrantable assertions against Mr. Norwood, but that his statement that the *Livonia* was overloaded, and that the overloading led to the loss of the ship, was substantially true. Mr. Norwood has therefore been refused a rule for a criminal information, but Mr. Plimsoll will have to pay his own costs, and is still liable to a civil action. Mr. Justice Blackburn explained very clearly the principles on which the Court had formed its judgment. It was laid down that a person who applies for a rule for a criminal information must himself be free from blame, and that, even though the charges against him may not be altogether true, yet if they are partly true, he will not be entitled to the assistance of the Court in punishing his assailant. The Court

eliminated at the outset the passages in which Mr. Plimsoll accused Mr. Norwood of using his influence as a member of Parliament for the purpose of preventing legislation against unseaworthy ships. It was held that the House of Commons was quite strong enough to take care of itself in this respect, and that there was no necessity for the intervention of the ordinary tribunals. We need not go over all the details of the evidence. It is enough to say that the *Livonia* was built by contract to carry 1,800 tons dead weight, that she had made several voyages with nearly 1,800 tons of cargo on board, and that when she went down in the winter of 1869 she was carrying 1,600 tons of iron and coals. She was spar-decked, but she was much stronger than ordinary vessels of that class, and it was contended by Mr. Norwood's counsel that she ought to be reckoned a main-deck ship. It was maintained on behalf of the plaintiff that the vessel was not overloaded, and that she was lost, first, through the breaking down of the engines, which made her roll in the trough of the sea, and next, by the iron in the ship breaking loose, which caused her to sink almost immediately. It was also asserted that the weather was tempestuous. The Judges did not accept this version of the matter. They came to the conclusion that the weather was by no means so bad as was alleged, that the breaking down of the engines ought not to have made the ship unmanageable, and that, in point of fact, it was the excessive weight of cargo which produced that result. Mr. Justice Blackburn observed very truly that "when a steamer is despatched on a voyage the owners must contemplate the possibility that the engines may be disabled, and if that be so, she must not be so loaded that the weight will be so much that the vessel will become unmanageable in the event of any accident arising to the engines." The *Livonia* had sails as well as engines, but according to the evidence of some of the sailors, when the sails were set, she was not under command, and would not rise to the waves. It was shown that she went out of Sunderland Dock drawing not less than twenty-one feet of water on an even keel, and she was therefore one foot three inches deeper than she should have been according to the evidence of the witness on whom Mr. Norwood relied on this point. Two experienced stevedores who loaded the vessel expressed their opinion that she carried too much, and one of them declared that he would not have sailed three miles in her if he had been promised a gift of the ship and cargo. The engineer also said the ship would not carry her load ten miles from land if the weather continued as it was; and yet the weather does not appear to have been much more severe than might fairly be expected in November. It may be asked why the stevedores and engineer, if they thought the ship dangerously loaded, did not remonstrate with the owners, but the answer is perhaps sufficiently obvious.

It seems to us that this case is a very good illustration both of the defects of Mr. Plimsoll's indictment and the faults of the shipowners. It is important to observe in what sense the word "unseaworthy" may be used in this case. The *Livonia*, loaded to a depth which must be considered imprudent, with a particularly dangerous kind of dead weight, was sent on a winter voyage to the Baltic. It is probable that, if the engines had not broken down, she might have reached her destination in safety; and it may be plausibly argued that the chances were that the engines would not break down. This is not a common occurrence on board well-appointed ships, and the *Livonia* appears to have come up to a good standard in that respect. Again, it was quite on the cards that the weather might be calm. Winter passages are often rough, but they are not always so. If one had been making a book on the subject, it would perhaps have been tolerably safe to lay five to one in favour of her making a safe voyage. There was a chance that the engines might be disabled by some accident, but, on the whole, the chances were rather against this happening. On the other hand, the chances were that in November there would be boisterous weather, but then there was just a chance that there would not. Mr. Norwood's mistake seems to have been that he backed a ship with men's lives at stake on the chances which would be deemed not unreasonable on the race-course. We attach no importance to the fact that Mr. Norwood was, when the ship sailed, at Suez. He accepted the charter-party before he started, and it must be assumed that, with his experience as a shipowner, he knew the peculiar dangers of a cargo of iron and a November voyage. There is no reason to suppose that he would in any case have personally superintended the loading of the vessel, and if an *alibi* of this kind were to be allowed, certain shipowners would possibly find it convenient to spend a good deal of time abroad. It appears, however, that Mr. Norwood possessed only a comparatively small interest in the ship, and that, in so far as he was insured, he was mainly his own insurer. We gather, however, that the other owners were insured. Perhaps the best way to discuss this case is to put Mr. Norwood out of it, and speak merely of the proprietary. Whether the proprietary were fully insured or not, they might still find it a profitable speculation to take the chance of a ship being lost. An owner who gets one or more voyages a year out of a ship more than other people, or loads her deeper in the water than the average practice, earns large extra profits, and has a considerable margin to come and go upon in case of casualties. The point upon which Mr. Justice Blackburn laid the strongest emphasis—and it was really the gist of the whole case—was whether it could be considered a fair, reasonable, and legitimate risk that a ship should be sent to sea in such a condition that, if an accident happened to the machinery, she would become unmanageable, and in imminent danger of being lost. It is quite clear that the *Livonia* should have been manageable under sail as well as under steam, but it was the tremendous dead weight in her hold which prevented her from rising to the waves, and getting out of the trough in which she was rolling about. It is difficult to say whether the iron really broke loose; the captain asserts that it did, but several of the sailors deny this, and the stevedores assert that it was securely packed. The latter also affirm that the iron was not packed open throughout so as to diminish the pressure on the square inch, but that there was so much of it that, when they came to within three feet of the beams of the main deck, it had to be stacked in a solid mass. Anybody who knows what a solid mass of iron is in the hold of a ship will hardly be surprised at the disaster which befel the *Livonia*.

We come then to this—that, taking the case of the *Livonia* as a sample case, shipowners are not, as Mr. Plimsoll alleges, in the habit of sending out absolutely unseaworthy vessels, trusting on the one hand to luck, and on the other to insurance; but that, in considering the conditions of safety, they cut everything so fine that ships are really sent to sea on the chance that, if there is serene weather and no accidents, and all things go well, the ships will get safely to their destination, but if the least thing goes wrong, then the ships will almost certainly be lost. It is altogether a fair-weather calculation; and it is surely not unreasonable to insist that when human life is at stake this sort of speculation should be discouraged. Before the *Livonia* sailed on her last voyage, she had made a number of successful voyages with nearly 1,800 tons of dead weight on board; but in those cases the weather probably turned out fine, and the machinery did not break down. The old proverb about the pitcher going often to the well helps to point the moral of the final catastrophe. We must say that this case does not tend to raise our opinion of Board of Trade inquiries, as they have hitherto been conducted. The agents of the Board did not take evidence in this case, but they looked at the papers which the captain and owners put before them, and came to the conclusion that the ship was not overloaded. It is true, as Mr. Justice Blackburn remarked, that they were not in possession of all the evidence placed before the Court of Queen's Bench; but then the question is why they failed to get possession of it. The reason appears to have been the extremely simple one that they did not take the trouble to seek for it. It is not difficult, we think, to see the direction in which a remedy should be sought. In point of fact, shipowners and underwriters have a comparatively small interest in the safety of the vessels with which they are connected. There is no reason to suppose that unseaworthy ships are sent out deliberately, but there is a dangerously wide estimate of inevitable losses at sea. A brisk business, with heavy risks, pays very well. The captain, like the crew, has a personal interest in the safety of the ship, but he is pretty well paid for his perils, and is very much under the owner's control. It is the sailors who have most interest in saving their own lives, for they have no other interest; and it is the sailors, consequently, who may be trusted to be most jealous and suspicious as to the soundness of the vessel. It would be worth while to strengthen their hands in this respect. No doubt sailors are not a perfect class; they often grumble without cause, and they sometimes try to take advantage of their employers by a strike at a critical moment. It must not be assumed that sailors are always in the right when they refuse to go in a ship; but they sometimes are, and it is necessary to provide them with every facility for getting questions of this kind fairly tried. Hard and fast rules such as Mr. Plimsoll advocates are open to the obvious objection that ships are built in a great many different ways, and that what would be fair in one case would be unfair in another. Each ship must be taken by itself; but there ought not to be much difficulty in laying down certain general rules as to the proportion between the cargo and the dimensions of a ship, and in marking the ship so as to supply materials for arriving at a conclusion as to whether she is or is not too deep in the water.

THE ROYAL ACADEMY.

VI.

LANDSCAPE having this year assumed a prominence and an importance wholly without precedent in the practice of the Academy, we shall devote an entire paper to the consideration of the phases which the English school of landscape-painting now presents. Perhaps the first thought suggested by the survey of the exhibition is the variety of styles, the diversity of manners; each painter treads in a path peculiar to himself, and approaches nature from the side which appears good in his own eyes. Nature herself therefore appears on these walls less in her unity than in her variety; thus the scenes respectively depicted by Mr. Poole, Mr. Vicat Cole, Mr. Peter Graham, Mr. Hook, Mr. Alfred Hunt, Mr. Henry Moore, and Mr. Brett, might almost belong to as many separate continents or worlds. The result is that, while each artist is circumscribed, the collective art is wide and comprehensive. One painter sees in nature breadth and power, another detail and subtlety, a third seeks for form, a fourth for colour. Some artists look at nature with the eye of Poussin, others follow in the wake of Constable, and a few seek to realize visions which haunted the frenzied fancy of Turner. We shall proceed to illustrate these varied modes of study by examples.

Mr. Poole, R.A., is Poussinesque; "A Lion in the Path" (28) presents an imposing composition of rocks, trees, and figure, deep,

in shadow, solemn in colour, grandly negligent of minor details which might militate against breadth and power. The manner intrudes as a not unwelcome anachronism into the midst of our modern art; it is as shadow falling among sunshine, or as tragedy darkening the light-hearted joy of life. We may here remark that this dramatic interpretation of nature belongs all but exclusively to figure-painters; thus it dates back to the times of Titian, Nicolas Poussin, and Salvator Rosa. The older poets, too, had an analogous way of looking at nature through the coloured medium of imagination, and even so placid and comparatively prosaic a writer as Wordsworth saw sadness in a sunset after watching o'er humanity. There are yet others of our landscape-painters, who, though too naturalistic to fall under the influence of historic styles, come to nature with preconceived ideas of what is essential to grandeur of motive. Mr. Peter Graham almost impersonates the elements when, under the title of "Wind" (64), he throws a storm across a pine forest, fills a wild sky with gusty rain, and makes the swollen torrent tear headlong over its rocky bed. This artist is never so great as when inspired by his own early work, "The Spate in the Highlands"; the idea of the present composition comes as a logical sequence to the prior conception; and thus we again see how each painter has his limits, while landscape art as a whole is year by year extending its sphere and comprising within its enlarged circuit new aspects of nature. Mr. MacWhirter is another Scotch artist inspired by Scotch mists. "The Fisherman's Haven" (669) is one of those pictures which seem to call for greatcoats and umbrellas, and yet the wind is so fierce that an umbrella would be blown away. The worst of this sort of art is that, like certain creeds, it deals in negations: light is blotted from the sky and colour erased from the earth; an inkpot rather than a colour-box is the companion of these painters. A black cloud is to a Scotch artist what a white horse was to Wouvermann—he cannot get on without it. We fear it is useless to look for either colour or daylight north of the Tweed. At all events "Morning on Loch Awe" (1052), by Sir George Harvey, President of the Royal Scottish Academy, is as absolutely colourless as chalk and water.

Some landscape-painters, as we have seen, strive how much they can leave out; others, on the contrary, study how much they can put in. Mr. Vicat Cole, A.R.A., the only exclusively landscape-painter within the pale of the Academy, has endeavoured this year as heretofore to throw into "Hay-time" (114) the fulness of "fresh verdure," the pretty fancy of "unnumbered flowers." He at the same time reconciles a detail which is perplexing and even trivial in the foreground with a sweep of wide-stretching woodland in the middle distance; there has seldom been seen a picture more accurate in detail of most parts; from grassy meadow to the distance of the hills on the verge of the horizon the range is amazing, while scope and altitude are given to the cloudy canopy of sky. And yet the picture has less of the spontaneity of genius than of the dull deadness of taskwork; the painter's execution has become muzzy and uncertain. Mr. Birket Foster's "In the Isle of Wight" (122) shows him less successful on the large scale of oils than on the small scale of water-colours. Mr. Redgrave, R.A., is another painter whose aim has been to compass the multitudinous detail of nature, and yet "The Fading Year" (147) is to art what a spelling-book is to literature; such styles belong to the infantile period of learning the letters. Neither does Mr. Leader grow stronger, though he has tried to give befitting breadth and power to the "Mountain's Solitude" (379). Hills, as delineated by Mr. Hering at "Borrowdale" (677), show a delicacy of tone and a refinement of sentiment which have gone out of fashion since the days of Danby. Sir Robert Collier deserves to be named as an amateur and something more; "Morning Light in a Swiss Valley" (1028) is marked by a detail and thoroughness denied to other public men who take to art as a pastime. Mr. Cooke, R.A., is an example of how far it is possible for an artist with little imagination or emotion to reach the true aspects of nature simply by means of a shrewd intellect. "Steeple Rock (of Serpentine), Kynance Cove, Cornwall" (419), is one of the very few studies which satisfy the scientific mind. The fractures in the stone, and the play of yellows and reds into greys, approach to the literal transcript of a diagram. And yet we here come upon the impassable barriers which divide science from art. The work, judged by art standards, is hard, mechanical, and colourless; it is photographic and little more—yet perfect of its kind. In such facsimile portraiture of angular rocks the artist gives as it were the anatomy, the backbone, of nature; landscape art is thus absolutely denuded. Mr. Brett, in "A Morning amongst the Granite Boulders" (681), a picture commanding by its unswerving truth a central position on the line, in like manner stops short at the point where even the best anatomical articulations in landscape art necessarily end. The spectator remains unmoved, or at most the sensation experienced is that of amazement, as when the eye gazes aghast on a petrifaction. The forms chosen are singular rather than beautiful—a constant and fatal mistake with these stern realists. Mr. Brett, however, has occasionally surrendered himself to beauty; the atmospheric conditions he chooses often present some of those startling but transient phenomena of the heavens which it is the province of the landscape-painter to place permanently on record.

The Academy is no longer conspicuous as in the days of Stanfield for marine pictures; in fact, our artists seem afraid to get out of sight of shore into mid ocean. Hence, while coast scenes abound, sea-pieces are scarce. Some of the best studies of coast and sea come from the easel of Mr. C. Hunter. Thus "Trawlers Waiting for Darkness" (386) may be commended for the grey hazy atmosphere which hangs over our English coasts; but the execution is almost as woolly as worsted-work; nowhere in this student's work do we meet the crispness of a swelling wave taken at its curl ere it breaks. One reason, no doubt, why large marine pictures are no longer produced is because "the wooden walls of England" are superseded by unpaintable ironclads, also because sails flying before the wind are giving place to smoky funnels and black paddle-boxes. All the products and appliances that pertain to the science of engineering are hostile to art. For analogous reasons architecture is less painted than formerly; some buildings are too new, others too fine, and our historic monuments labour under the disadvantage of being put in good repair. At all events since the time of David Roberts the deliberate painting of architecture has fallen into disuse. An additional reason why our artists have turned their talents to simple landscape, undisturbed save by a cow or a cottage, may be that the cathedrals, castles, Hôtels de Ville, bridges, &c., in England and on the Continent have been so often drawn that the public grow a little weary. But nature never wearies; a tree and a stream, a mountain and a sky, cannot pall on the mind, however oft repainted. Egypt, though about the most monotonous of lands, whether for architectural form or atmospheric effect, seems to be one of the last of countries to be used up. Mr. MacCallum, in "The Vocal Memnon" (676), presents figures as familiar as the statue of the Duke of Wellington on the Arch; and yet, though these colossi have again and again been seen in exhibitions under all possible effects, the painter startles us with a new surprise by more than accustomed effulgence reflected from the rising sun. The treatment is trite; the striking contrast between the bright light of morning and the cool shade of night, as the sun rising above the horizon illumines the tops of these two giants standing in the plain with the summits of the hill-cut tombs of the kings beyond, is an effect which nine painters out of ten would have chosen as the most obvious. Still a scenic display has seldom been forced up by such strong footlights. With more subtle gradation of shade and colour Mr. Dillon has depicted the "Tombs of the Memlooks" (22). The refined qualities of this well-considered composition suffer from injudicious hanging. Yet another well-known structure on the banks of the Nile remains to be noticed, "The Temple of Kom Ombos" (1016), by Mr. Tilton, an American painter long resident in Rome. The picture having won by desert a place on the line, its peculiar technique can be closely examined. In years past we have observed in Rome this anomalous and not very pleasing mode of manipulation. Mr. Tilton committed himself to the theorizing of Mr. Page; the one was a landscape, the other a figure painter. They proclaimed that they had discovered the secret of Titian; they held that by an endless succession of glazings they could imprison upon canvas sunbeams and prismatic colours, so that light was said to shine somehow from the back of the picture. Thus, when visitors entered studios where such products were present, it was usual to draw down all the curtains so that the work, like one of the heavenly bodies, might shine by its own light. We regret to add that no such effect takes place within the Academy; indeed the picture has been so toned down that little light is left in it.

Cattle, sheep, and goats have of late years in English art been growing wooden and Dutch-built; indeed the Academy boasts a show of animals in what may be termed the Noah's Ark style. We need only refer to the bovine productions of Mr. Cooper, R.A., and of Mr. Ansdell, R.A., in proof of the inevitable fate of artists who for half a century paint carcasses and skins, and little more. In contrast Mr. Davis, the newly elected Associate, endows with life, movement, and intelligence a fine group of cattle enjoying a "Summer Afternoon" (453). The modelling is soft yet firm, the hair turns up fresh facets with the undulations of surface as in the best studies of Paul Potter; each head, too, is an intelligent portraiture of character. The artist has formed an independent style, different from, yet scarcely inferior to, contemporary modes in Belgium and France, as may be seen by comparison with a cattle piece by M. Auguste Bonheur (1032). Beasts as painted by Mr. H. Hardy (129), and by Mr. Basil Bradley (1057), are simply monstrous and repulsive.

Reverting once more to simple landscape, the styles present in the Academy, though, as we have said, individually circumscribed, are collectively extended and varied. Sometimes an old manner is revived, as when Mr. Drabble, in "Passing Gleams" (196), and Mr. Anthony, in a churchyard (662), call Constable once more to witness the solemn solidity of his native earth. A more chaotic view of nature is taken by Mr. Oakes; "A Scottish Stream" (599) might seem to bear out the idea held by the older geologists that creation was but a succession of catastrophes. We must not pass over Mr. Wade's "Spring Ploughing" (534); this conscientious study is from the sober, stern, and shadowy side of nature. A stormy sunset (987), by Mr. Henry Moore, is also specially commendable for unity of motive.

The highest phase of landscape art is that which unites form, colour, and expression. Mr. J. Linnell, who now stands as a father among our English painters, contributes "A Coming Storm" (78), wherein he reconciles in good degree these all but incompatible qualities. This venerable artist has long settled into a grand mannerism, suggestive of Rubens, which his two sons seek to perpetuate. Yet Mr. W. Linnell in chromatic arrangements is more intricate and decorative; he paints "The Heath" (447) as if the earth were a tapestry of purple and gold; and he introduces

huntsmen and gipsies as if the first and final use of humanity were to illumine a landscape with radiant colour. Mr. C. P. Knight, in a composition of blue sea and golden headlands (107), has also gone far to solve the difficult problem of how colour may be supreme without the surrender of form. The same perplexing puzzle has been solved by Mr. Alfred Hunt in "A Mountain Joyous with Leaves and Streams" (1026). Light is here gained almost without the intrusion of shadow, and form preserved, though outlines are merged. To pronounce form and at the same time to maintain the due relation of tone and colour in the midst of dazzling sunlight, is a great feat in landscape art. Mr. Raven is more bold and less successful when he places a bonfire between the spectator and the moonlight sky; yet, though he challenges failure, he is always thoughtful, and therefore awakens thought in others. Mr. Raven is one of the few artists whose mature manner is due in part to the training they passed through during the period of "Præ-Raffaellitism." Indeed, he and others already named have conceived the thought of working the literal detail of the so-called Præ-Raffaellites into Turneresque systems of colour and effects of atmosphere. Thus it may yet prove possible to unite into one landscape the utmost realism and the most ultra-idealism known in modern art. In a year's time, when we next recur to the Academy, we shall hope to encounter some of the new combinations thus made possible to the school of the future.

MADAME RISTORI AS ELIZABETH.

THE public was lately in danger of being overdone with theatrical imprecation. The performance of *Medea* by Madame Ristori at one house and by Miss Bateman at another would perhaps have been too much of a good thing, and we are therefore glad that the Italian lady has temporarily relinquished the cursing business to the American, and has appeared in parts less familiar than Medea. The play of *Elizabeth* presents to us not only the Queen of England, but her courtiers. Lord Burleigh, Sir Francis Drake, and many other remarkable characters appear upon the stage, and conduct themselves in a very remarkable way. Lord Burleigh has become Chancellor instead of Treasurer, and he does not maintain that silence which is so impressive in the *Critic*. Indeed he talks so much that when he complains that the Queen keeps her secrets from him we feel more persuaded of the Queen's wisdom than of his. The Queen does not curse her enemies like Medea, but she swears roundly in conversation "Death of my life" and other oaths like the true daughter of King Henry VIII. The Envoy Extraordinary of the King of Poland made a disrespectful remark in her presence, imagining that she did not understand Latin. "By the soul of Tully," says the Queen to the Earl of Essex, "I well brushed up my classics." She bangs the table with her hand, and would have broken it if it were not made of bronze. "This is the second time to-day," says Lord Burleigh, "that your Majesty has been in a passion." "Yes," answers the Queen, "and my doctor only allows me to go into a passion once a day." She is very angry with Shakspeare for presuming to bring her father and mother on the stage, but she is pacified by Bacon, who reads the lines in which she is introduced as a babe, and the glories of her reign are prophesied by Cranmer. Soon afterwards the Spanish Ambassador arrives, and the Queen speaks her mind as to his master without reserve. The Earl of Essex entreats her to be calm. The Queen answers, "Outbreaks like these do me much good; I am certain that I have this day prolonged my life by ten years." The ladies of the Court swear according to their degree, but of course less violently than Her Majesty. Lady Sarah, one of the most meek and mild of women, wishes that, if she speaks not truth, her mother's soul may burn eternally. The English translator of the play appears, like the authors of some of the conversation-books which are sold to travellers in Germany, to have suffered under the disadvantage of a foreign printer. The translator doubtless wrote "May my mother's soul continue in ——!" But the printer merely puts a full stop after "in," and thus the daughter's wish has apparent reference to the last antecedent, which is the Tower of London, and not to any warmer place. The play is constructed merely to exhibit the character of the Queen, and we need not therefore complain that the other characters are insignificant. The acting of the male parts is about equal to that of well-drilled supernumeraries of the opera. Lord Burleigh, Sir Bacone, Francesco Drak, Il Conte d'Essex, and Giacomo VI., all walk in and walk out. The young King of Scotland, in red breeches and red-topped boots, makes a slightly grotesque figure, and we decidedly object to the theatrical tailor's version of "vestito semplicemente," which is given as a stage direction. Another and greater absurdity is the attempt to mark the progress of time by putting Sir Bacone in the fifth act into a grey wig, and the Queen into wrinkles, while there is nothing in the play to show that the action is not continuous.

The interest of the play begins with a scene between the Queen and the Earl of Essex in the second act, in which, by a compliment to red hair and other flatteries, the Earl leads the Queen to show herself momentarily a woman. She gives him a ring, which he is to send to her if ever he should lose her favour, and she pledges her word that, on seeing it, she will pardon him. This is part of the same scene in which the Queen had "let out" against the Spanish Ambassador, and had told Essex that it did her good. At the end of the scene she resolves that Mary Stuart shall die, perhaps that very day. She signs Mary's death-warrant, and leaves it on the table and retires to her room. Sir Davinson takes it away. Giacomo VI. arrives to beg his mother's life. The Queen pretends that she will grant his prayer; but at this moment Sir Davinson returns and announces that execution has been done upon Mary. The Queen flies into a violent rage with Sir Davinson, and sends him to the Tower; and this explosion, besides being good for her health, enables her to maintain before Giacomo VI. and her courtiers the fiction that Mary's head has been cut off by an unfortunate mistake. Giacomo VI. makes a hasty exit out of the Queen's court, which he evidently thinks is getting too hot for him. The Queen either feels or feigns remorse for Mary's death, which, however, vanishes on the arrival of Drake with news of the Armada. The author has done full justice to the warlike spirit of the Queen. She declares her delight at learning the true destination of the Armada, rallies Lord Burleigh on his fears, and says that if many Englishmen are like him the lions must be struck out of England's shield. The Spanish Ambassador enters, and she asks him whether he is come to tell her once more that the Spanish fleet is destined against the Turks; and then she takes down her father's sword, draws it, and enacts a grand defiance of the power of Spain. It is not the fault either of the author or actress that Queen Elizabeth in this scene reminds us slightly of another potentate, the Grand Duchess of Gerolstein. As Mr. Puff says in the *Critic*, two persons happened to hit on the same thought, and one of them published it before the other—that is all. However, "the sword of my father" brings the curtain down with great applause. The next act shows us rejoicings in the palace for the defeat of the Armada. The description of the Queen's share in these rejoicings rather conflicts with our idea of her demeanour. "She runs from hall to hall like a young gazelle." The jewels which she wears would buy an earldom. This is not a very strong expression, as, at least under Queen Elizabeth's successor, the market price of an earldom was not extravagant. The Queen enters. She announces that in consideration of the victory she has pardoned Sir Davinson, and he must pray for the soul of Mary Stuart, put to death through his fault. The Queen has been playing on the harp so as to draw after her, says Davinson, even the beasts of prey. "Yes," answers the Queen, "I was surrounded by my courtiers." The next incident is the appearance of a young woman whose husband had died of grief at the execution of Mary Stuart, and who has entered the garden of the palace with intent to assassinate the Queen. The young woman is pardoned. The Queen then "takes her state," as the old dramatists would say, and receives the conquerors of the Armada. She rewards all but Essex, who has disobeyed orders. He breaks out into complaint of injustice, and challenges Lord Howard. She bids him take up his gage, and raises her hand to strike him, and he grasps his sword. He is seized by her order and carried to the Tower, exclaiming, "My head will add one more to those which the Angel of Justice will hold up before you in your dying hour." In the next act we are to understand that Essex is lying in the Tower under sentence of death; that the Queen will take no step herself to pardon him, but hopes that he will send to her the ring she gave him. She forbids her attendant to go to the Tower, but hopes that the attendant will perceive that, although her lips forbade, yet her heart entreated her to go. But the attendant, a worthy lady, is rather stupid. Presently Lady Sarah, the wife of Lord Howard and lover of Essex, arrives. She has been to the Tower and received the ring from Essex, but on her return her husband took the ring from her and locked her up. She escaped, and hurried to the Queen, but at this moment a cannon is heard, which is the signal that Essex has lost his head. Then grief and horror possess the Queen entirely. She reproaches Bacon with having contrived the death of Essex, drives him and the other courtiers from the room, and falls upon her knees "alone with her remorse and God." Here the power of the actress fully appears. We know now that we are looking upon an artist worthy to be named with Siddons and Rachel.

In the fifth act the Queen and some of her courtiers bear marks of age, while the King of Scotland, who has come to London to take care of his succession, looks as youthful as before. The death of Essex is said to have broken the Queen's heart, and as there is nothing to indicate any great lapse of time since this event occurred, we infer that the Queen's wrinkles are caused by sorrow, and Bacon's grey hair and baldness by hard work in his profession. The Queen, despite her sickness, has gone down to the House of Parliament, and is rating the Commons soundly for trenching on her prerogative. Lord Burleigh and King James seize the opportunity to discuss the future. The expectant sovereign of these kingdoms ventilates a little clap-trap about basing his rule upon a king's duty and his subjects' love. The Queen's return perturbs this discourse, and the King is stowed with some loss of dignity into a side room, where, says Bacon, he may think over his coronation speech. The Queen enters in her mantle and crown. Her features are contracted, and her head bowed down, but she raises herself with an effort and tries to appear stronger than she is. The struggle of a firm will against weakness and death is finely represented by Madame Ristori. "Like to a ripe ear of corn she is compelled to bow the head." It would be well, we think, if the cushions on which she reclines were placed on some kind of raised platform, as it is difficult to preserve dignity or solemnity while lying on the ground. She labours under the same difficulty in this respect as Mr. Irving when

he dies in *Eugene Aram*. We should not forget that Shakespeare makes Constance seat herself on the ground exclaiming, "Here I and sorrow sit. Here is my throne." The mingled emotions of the Queen are forcibly portrayed. She grieves for Essex; she feels that her popularity has departed. This morning, when she traversed the streets, one might have thought that her litter was a bier. Is she then so very old? She looks in her glass and sees deep wrinkles, but hardly any trace of silver in her golden hair. Yet she feels that her frame is wasting. Her limbs grow icy cold; her sight fails, darkness grows upon her, and amid the gloom advance tall spectres, and trunkless heads fall at her feet. She sinks back upon the cushions; King James approaches, thinking she is dead; she starts up in horror, exclaiming that it is the Stuart's son, and that he bears in his hand his mother's head. Perceiving her delusion, she exclaims that she is better. Drake now enters, announcing the pacification of Ireland. Growing again worse, she names James her successor, but is disturbed at the moment by shouts from outside of "Long live King James!" She is still Queen, and will keep the crown while living. James may take it from her head when she is dead. It is no blame to the author to suppose that he had in his mind the dying hours of King Henry IV. when he wrote these lines. Two things she commends to her successor—her Bible and her father's sword. With the one he will defend the other. Then she calls on the soul of her beloved Essex to meet her in Heaven, and expires.

The author has done his work quite as well as could be expected. He has produced an article suited to the English market, and we do not see how he could have improved it. If Madame Ristori desired to assume the character of Queen Catherine, a translation might be made for her by the same hand of those scenes of Shakspeare in which the wife of King Henry VIII. appears; but this could hardly be done well without one or two strong actors to support her.

THE ITALIAN OPERAS.

OUR musical readers may have felt some surprise that up to this time no account has been given of the operatic doings at Covent Garden and Drury Lane. Herr Richard Wagner once wrote about a great composer, whom we shall not name, that, "with little or nothing to say, he said it in an elegant manner." We cannot boast of the peculiar faculty attributed by the author of the *Nibelungen* Trilogy to the composer in question. With very little indeed to say, we preferred remaining silent until something fresh might turn up.

Although Mr. Gye opened the doors of the Royal Italian Opera as far back as the 1st of April, and Mr. Mapleson those of Her Majesty's Opera only a fortnight later, not a single novelty has yet been produced at either house—unless *Ernani*, first heard about a quarter of a century past at Her Majesty's Theatre when under Mr. Lumley's memorable direction, and since frequently repeated, not only in the Haymarket, but occasionally in Bow Street (1852, for instance, with Angiolina Bosio as Elvira), can be styled a "novelty." *Ernani* was produced in 1844 at the Scala, Milan, one year later than *I Lombardi*, and two years after *Nabucco*, Verdi's first decidedly successful work. It was last performed here in 1866, at Her Majesty's Theatre, under the direction of Mr. Mapleson, the leading parts being assigned to Madlle. Tietjens, Signor Tasca, M. Gassier, and Mr. Santley. Mr. Gye in his prospectus fairly announced it as a "revival." Such will be also the same composer's *Luisa Miller* (founded upon the *Kabale und Liebe* of Schiller), presented at Her Majesty's Theatre in 1858, the chief characters being sustained by Piccolomini, Alboni, Giuglini, Beneventano, and Violetti; and such again Rossini's glorious *Mosè in Egitto*, the French amplification of his *Maometto Secondo*, brought out, two years later, with great magnificence, at Covent Garden, under the strange and unbiblical title of *Zora*—but, seeing how early it was abandoned, with scarcely proportionate success. To the revival of these Mr. Gye pledges himself: as also to the reproduction of *Il Guarany*, by Señor Gomez, about which nobody affected to care very seriously last year. Of the two *bond fide* novelties mentioned in the prospectus, Auber's charming comic opera, *Les Diamans de la Couronne*, for the first time (here at least) in an Italian dress, with Madame Adelina Patti as the heroine, offers unquestionably the strongest attraction. But this, like Herr Wagner's *Tannhäuser* and *Lohengrin*, has been talked of more than once; and we shall wait and see, notwithstanding the general belief that it is positively in rehearsal. About the new opera (not so very new by the way), *I Promessi Sposi*, founded upon the celebrated romance of the late Manzoni, with music by Signor Ponchielli, or Punchielli—for it seems, like the "Je m'en vais, ou Je m'en vas," of the moribund French grammarian, that "*les deux se disent*"—nothing has been heard since its announcement. We are already advanced more than half way into the season, and just about toppling over to the other side. As, however, *I Promessi Sposi* is unreservedly promised, no doubt ought reasonably to be entertained that it will be forthcoming. At the same time many people would doubtless have preferred hearing an opera by Signor Petrella, composer of *Ione*, Verdi's fiercest and most uncompromising disciple—certainly his most furious imitator. Signor Petrella is reputed to have been dubbed by Verdi, "The last of the Romans"—the very epithet bestowed by Rossini, in good-natured irony, upon Verdi himself. To whom Signor Petrella, in his turn, will award that enviable distinction remains to be known. He may possibly retain it exclusively for himself, having, as it is said, no leaven of irony in his nature.

The foregoing remarks explain all to which the long experienced manager of the Royal Italian Opera has pledged himself in the way of novelty, or *quasi*-novelty. For the rest he has relied, and relies, unconditionally, not altogether without judgment, on the repertory of well-known works, the performance of which, year after year, has earned for his theatre a European fame. Upon these, from the beginning of the season, he has drawn without stint. His company is strong in all departments, and he has been able to employ it to excellent purpose in the popular operas which he has immediately at command. Pending the arrival of Madame Adelina Patti, for many years Mr. Gye's most cherished prima donna, and, now that Madame Pauline Lucca seems determined upon making America her future home, without an equal, several artists previously unknown to England have rendered more or less valuable service. The majority, as might have been expected, are unlikely to gain a position of any consequence; but two or three have made some mark. One of the most promising, Madlle. Anna D'Angeri, came forward on the first night of the season. The opera chosen for her *début* was the *Africaine* of Meyerbeer. This choice was rather a serious obstacle to complete success—and no wonder. It is not easy for any singer to come after Pauline Lucca in the part of Selika, expressly intended for her by Meyerbeer, who wished her to undertake it in Paris, but did not live to see her play it even at Berlin. Nevertheless, Madlle. D'Angeri possesses excellent qualities both of voice and intelligence, which, being young, she may, with diligent study, ripen, if not into perfection, at least into something near it. She comes from Mantua, and may probably go back to Mantua; but that is no reason why she should not at some future period return to London—not, however, to impersonate Leonora, in the *Favorita*, or Valentine, the heroine of the *Huguenots*, her most recent and least successful efforts, neither character lying within her capabilities, mental or physical. The successor to Madlle. D'Angeri was Madlle. Amalia Fossa, about whom the most that can be said is that she was indulgently received by the audience. The opera, either selected by the lady herself, or selected for her, was the *Traviata;* but more is demanded for an adequate embodiment of Violetta than belongs to Madlle. Fossa, who, though apparently endowed with a certain amount of instinctive talent, has little power of expression. Habitual frequenters of our Italian Operas have seen and applauded so many "Traviatas," from Piccolomini and Bosio (in 1856) down to Patti and Nilsson, that they are indisposed to regard with much leniency any ordinary portrayal of the character; and that Madlle. Fossa's portrayal is little beyond the ordinary must be allowed. In her subsequent essay, as the heroine of M. Gounod's *Faust e Margherita*, Madlle. Fossa risked still further and more perilous comparisons. How many Gretchens have we not seen and admired, from Tietjens, first at Her Majesty's Theatre, Miolan Carvalho, first at the Royal Italian Opera, and passing over Désirée Artôt, &c., down to Lucca, Patti, and Nilsson! It was at least indiscreet to put a young and inexperienced artist through such an ordeal.

A third new comer, Madame Paoli, whose name had not been advertised in the prospectus, made her first appearance as Leonora, in the *Favorita;* but, though possessing undeniable ability, a voice both agreeable and telling, and a *mezza voce* extremely well managed, if sometimes too subdued, she failed to create anything like a powerful impression. Madame Paoli is one of those who by trying to do too much generally achieve too little. Her best scene was the last; but even in this there was a great deal to desire, well as she was supported by Signor Nicolini. Here, again, the audience could not possibly help going back to old reminiscences; and among these reminiscences were Grisi and Lucca. At the second performance of *La Favorita* Madlle. D'Angeri took the part of Leonora, *vice* Madame Paoli; but, to speak the truth, there was nothing gained by the substitution. Mr. Gye's recent discoveries in the way of vocalists of the other sex, with two exceptions, have not afforded unqualified satisfaction. Signor Oliva Pavani, for example, a tenor who made his first appearance in *Lucia di Lammermoor*, as Edgardo, with the engaging young Canadian, Madlle. Emma Albani, as Lucia, is doubtless an artist of considerable culture; but he ought to have arrived here twenty years earlier. Signor Pavani has the advantage of being able to hold on sustained notes without recourse to the so-called "tremolo," which, as we have said more than once, is not so much a want of taste as a physical imperfection. He also sings and acts with intelligence; but of charm he is destitute. Signor Montanaro, another new tenor, possesses the gift, now belonging to very few, of mastering without effort the earlier music of Rossini—music written long before Rossini was the Rossini of *Guillaume Tell*. By this alone he won the hearty approval of connoisseurs on the occasion of his *début*, when he played Almaviva to the Rosina of that clever Hungarian singer, Madlle. Smeroschi. Signor Montanaro is also thoroughly well versed in the "*recitativo parlante*," which he renders intelligibly and with emphasis never exaggerated. Moreover, in the little he has been commissioned to undertake Signor Montanaro proved himself as much at home in the histrionic as in the vocal requirements of his art. If he had only the appearance and physical qualifications of a Mario, or even of a Giuglini, he would be, even now, a model Almaviva; but unfortunately he is wanting in both. How far these are apt to influence public opinion and excite public sympathy need scarcely be insisted on. Both Signor Pavani and Signor Montanaro have appeared

in other operas—Signor Pavani, for example, as the Duke, in *Un Ballo in Maschera*, Signor Montanaro as Carlo, in *Linda di Chamouni*. On Thursday, moreover, Signor Pavani undertook one of the most trying and arduous of tenor parts—that of Arturo in *I Puritani*, the Elvira being Madame Trisolini. Passing by one or two nonentities—such as Signor Edardi, a light (very light) tenor—we may name Signor Nannetti and Signor Maurel as the remaining two of Mr. Gye's more or less noticeable late acquisitions. Signor Nannetti, a barytone-bass, in so far as we may be permitted to judge by his representation of Mephistopheles, though by no means a Faure, to whom the character by prerogative of genius belongs, can boast of certain qualifications not to be despised—a fair voice, for instance, and a fair amount of dramatic talent; but there can be little hope of his attaining anything higher than a modest place. He is, in fact, one of the so-termed "respectables." Signor Nannetti played Mephistopheles, to the Margaret of Madlle. Smeroschi (another Margaret—happy M. Gounod!), who is no more the Margaret we have a right to expect at the Royal Italian Opera than was Madlle. Fossa before her, Madlle. Berini some years ago, and others who might be named. M. Maurel, just referred to, also a barytone-bass, is likely to render the Covent Garden director more essential service than any other of his recent acquisitions. This gentleman is an artist *pur sang*, and though a Frenchman has acquired considerable proficiency in the Italian tongue. He has a handsome person, a graceful and manly stage demeanour, a fine and well-trained voice, together with real dramatic intelligence. He made his *début* as Renato, in the *Ballo in Maschera*, one of Verdi's best operas, despite its inferiority to Auber's *Gustav III.* from which the libretto (by Scribe) was borrowed. It is reported that M. Maurel was recommended by M. Faure, whom he has to thank also for friendly counsel. If that be the case, it exhibits M. Faure in the most favourable light as an artist, with few precedents, wholly ungeotistical and devoid of jealousy. Without being absolutely his equal, no one that we know of approaches so nearly as M. Maurel to the excellence of M. Faure; and this was proved by his respective impersonations of Guillaume Tell and Hoel (in Meyerbeer's *Dinorah*), two of the characters upon which M. Faure has long ago put his stamp, and in the latter of which he has never found a rival, except it be our English barytone, Santley.

We have now enumerated all the additions to the Covent Garden company, Madame Elvira Trisolini, who made her first appearance on Thursday night, as Elvira, in Bellini's *I Puritani*, excepted. About this lady we must take another opportunity of speaking. If we are unable to credit Mr. Gye with entire success in his new discoveries, it is only just to credit him with praiseworthy enterprise. Of course the old favourites of last year, some, indeed, of many preceding years, are back again, with one reservation, a reservation much to be deplored—that of Madame Lucca, who in her way stands alone. First at her post was Madlle. Emma Albani, who earned such general applause last season, and to whose future career every amateur looks forward with interest. We may say at once that Madlle. Albani, as the heroine of *Lucia di Lammermoor*, gave convincing proofs that she had been studying with earnestness. Her progress is unmistakable; and, with youth and attractive personal gifts in her favour, there is no reason why she should not reach the highest position. Her voice is one of charming quality, more particularly in the extreme notes of its register, and these notes she uses with consummate art. Madlle. Albani has also reappeared in *La Sonnambula*, *Martha*, *Linda di Chamouni*, and *Rigoletto*, in every one of which operas the same marked improvement was recognized. Her last character was Ophelia, in the *Hamlet* of M. Ambroise Thomas—a bold essay, with Madame Christine Nilsson so near at hand, but, notwithstanding that, on the whole deservedly successful. The scene with Hamlet, and the scene at the end of the opera, when Ophelia, bereft of reason, drowns herself in the stream, after warbling the pathetic Swedish melody which M. Thomas has turned to as good account as M. Flotow has turned the "Last Rose of Summer" (the "Groves of Blarney") in his *Martha*, alone sufficed to persuade every one that Madlle. Albani had not merely improved as a vocalist, but equally so as an actress. The greatest hopes may fairly be entertained of this interesting young Canadian.

What is there more to say about Madlle. Adelina Patti, who made her first appearance as Rosina, in the *Barbiere*, and, "*dulce subridens*," acknowledged the enthusiastic applause of the audience when showing herself at the balcony of Dr. Bartolo's house—afterwards singing the familiar "Una voce poco fa" as she alone can now sing it, and in fact sustaining the whole part as she alone can now sustain it? To criticize her performances of Rosina, Amina, Dinorah, Zerlina (*Don Giovanni*), Leonora, in the *Trovatore*, which she plays too seldom (though we confess to having heard more than enough of the opera), and other characters in which she is familiar, would be superfluous. Enough that she remains, and is likely to remain, *facile princeps* in her peculiar line, and for versatility may be regarded as another Malibran. Witness, for example, her impersonation, the other night, of Elvira, the unhappy heroine of Verdi's *Ernani*. Her execution of the music was perfect, and her acting was such as to encourage a belief that, even without music, her natural language, she could allow Victor Hugo to speak as eloquently as if Verdi had nothing to do with it. This assertion, however, will astonish no one who believes, as we do, that the Hugo of the opera is the composer we have named.

What the other artists of Mr. Gye's company have done need scarcely be told. To name them, indeed, will almost suffice. Signor Nicolini, who improves every season, is, though a Frenchman, becoming more and more Italian; and (Signor Bettini not being a "star" in the effulgent sense of the term), until Signor Mongini left Drury Lane to go to Covent Garden, had most of the great tenor parts to himself. Of course Signor Nicolini could not vie with Signor Mongini in such parts as Otello and Arnold. That, in spite of M. Maurel, M. Faure, his compatriot, has been the foremost bass-barytone of the company will be no less readily understood than that his impersonations of Don Giovanni and Hamlet are, as they have ever been, in their way incomparable. Madlle. Scalchi—Madame Trebelli-Bettini (perhaps) excepted—is the best singing contralto, with the richest and mellowest voice at present to be heard on the Italian stage; and this has been demonstrated over and over again. Signor Graziani preserves that charm of voice which, though limited in register, still exercises, his artificial style of phrasing notwithstanding, a potent sway. Signor Cotogni, a clever and versatile artist, has been competent and acceptable in almost every part assigned to him; but he would do wisely to dispense with Rigoletto, for, though by no means so divertingly grotesque as Signor Graziani, he has not the subtle dramatic requisites to enable him to adequately pourtray the character. The true delineation of the unlucky Court Jestor, indeed, seems to have accompanied Giorgio Ronconi to America. Anything more, except a word to recognize, not for the first time, the valuable services of that ever ready artist Madame Sinico, who has especially distinguished herself this year as the Queen in *Hamlet*, is unnecessary. Madlle. Corsi, Signors Ciampi, Bagagiolo, Capponi, Tagliafico, &c., maintain their positions as indispensable members of the Covent Garden "old guard," and deserve all the consideration they have hitherto received; but we must persist in asserting that Signor Ciampi is more noisy and loquacious than comic, and that Signor Bagagiolo, considering the small progress he has made, is still *vox et præterea nihil*. That the company, however, is more or less efficient in each department, and indeed, has well shown its efficiency, cannot be denied. No less than twenty operas have already been performed, viz:—*L'Africaine*, *La Favorita*, *Lucia*, *Un Ballo in Maschera*, *Faust e Margherita*, the *Sonnambula*, *Guillaume Tell*, *Martha*, *Linda di Chamouni*, *Masaniello*, the *Barbiere*, *Don Giovanni*, *Rigoletto*, *Dinorah*, the *Trovatore*, *Hamlet*, *Otello*, the *Huguenots*, *Ernani*, and the *Puritani*. Meanwhile every subscriber is longing for the *Diamans de la Couronne*, with Madame Patti as the Queen of Portugal.

Mr. Gye persists in his system of maintaining two conductors, which it may be presumed he finds advantageous. No doubt Signori Vianesi and Bevignani are able musicians; but each having his own individual manner of directing, it is fair to suppose that the members of the orchestra may, now and then, be more or less perplexed. If not, so much the better. The orchestra, with our great English violinist, Mr. Carrodus, as "*chef d'attaque*," is numerous and powerful, and the chorus very good. Mr. Gye has sustained a grave loss by the unexpected death of Mr. Augustus Harris, so long his diligent and indefatigable stage manager. What Mr. Harris did, however, must for a long time be beneficial to the theatre.

In our next number we hope to give an account of what has been going on at Her Majesty's Opera since Mr. Mapleson reopened the doors of "Old Drury." Time was when the public heard as much of musical drama at Drury Lane Theatre as of drama without music; but now amateurs must depend exclusively upon the short season of Italian Opera.

RACING AT ASCOT.

WINSLOW'S victory in the Royal Hunt Cup race was secured against considerable disadvantages, and stamps him as one of the best milers of his year, Prince Charlie always excepted. He was giving a stone all but a pound to Reine, a One Thousand and Oaks winner, and 1 lb. to Laburnum, who once ran Prince Charlie to a head. He was also giving weight to every one of the remaining competitors; and moreover he had to suffer from the numerous false starts and delays that invariably attend races of this description, and that so often destroy the chances of the top-weights before the flag falls. However, when the signal was given, Fordham was first off with Winslow, and though of course he did not attempt to force the running, yet he got a clear course for his horse, and thereby avoided that risk, so common in large fields, of being shut in and prevented from getting near the front. Freed from such impediments, quality is sure to tell at the finish; and though Reine had so much the best of the weights, and so much the best of the position, too, opposite the stand, yet a well-timed rush of Fordham's enabled him to secure the handsome prize for Winslow. The most gratifying circumstance of the race was that the foremost places were gained by animals of fair racing merit, Winslow, Reine, and Oxford Mixture; and that highly-bred rubbish, four-year-olds like Lord Gough, with 6 st. 7 lbs., and Wolfhall, with 6 st. 10 lbs., were never formidable for a moment. It would be indeed unfortunate if there were many repetitions of Valuer's victory in 1871, when a wretched six-year-old, favoured by a feather weight, managed to struggle home in front of horses much better entitled to carry off one of the few prizes of the year worthy of a sportsman's ambition. Winslow could hardly hope to follow up his Hunt Cup success by winning the Windsor Handicap on the following day, for he

had to give no less than 10 lbs. to Drummond, and that, too, over a six-furlong course, so well suited to the powers of M. Lefèvre's speedy horse; and it was no disgrace to him to be defeated by only three-quarters of a length. Fordham, by the way, was riding Drummond; but Custance did all that could be done with Winslow, and at even weights it would have been a very close struggle between the pair. We must not take leave of Wednesday's racing without mentioning that Miss Toto carried off the Fernhill Stakes for two- and three-year-olds, beating The Colonel easily over his own distance at weight for age, and giving M. Lefèvre a line for estimating the prowess of another youngster from his stable who, on the following day, was to astonish the world. Last year the result of the Fernhill was very different, for M. Lefèvre's smart two-year-old, Trombone, could get nowhere near Prince Charlie.

We briefly noticed last week the Cup race on the Thursday; and we may now add that the field consisted of three five-year-olds, Hannah, Corisande, and Eole II., two four-year-olds, Cremorne and Revigny, and two three-year-olds, Flageolet and Thorn. Thus it will be seen that there was nothing in the race sufficiently good to test the real merits of Cremorne as a stayer; for both Hannah and Corisande have probably seen their best day, and Thorn and Flageolet—however much the latter may have improved since the Two Thousand—cannot be considered first-class three-year-olds. However, the pace was better than is usual in long-distance races; in fact, it was so good that six out of the seven were effectually beaten at the end of two miles, and Cremorne, who was so full of running as almost to overpower his rider, came away by himself, and won as he pleased. On the same day, just as on the day before, Gang Forward and Kaiser each won a valuable race, but Gang Forward's task was far the easiest. On the Wednesday he had given Highland Laddie 12 lbs. and defeated him easily; on the Thursday he had to give Mr. Merry's horse 7 lbs. only, and therefore it is not surprising that he won more easily than before. Kaiser had to meet Chopette, and to carry a 12 lbs. penalty; and it was only the distance—a mile, too far for Chopette—that saved him from a reverse. As it was, she reached Kaiser's head opposite the Stand, and he had to be vigorously roused, but the mare dying away, according to her wont, in the last few strides, Mr. Savile's horse won by a neck. This was the best race run during the week by any of Baron Rothschild's representatives, who have been extraordinarily unfortunate of late. In the All-Aged Stakes Drummond tried conclusions, at even weights, with Prince Charlie; but his magnificent opponent treated him as he treats all others over short courses, and left him as if he were standing still. How good Prince Charlie is this year over a six-furlong course we have no means of knowing, with such extraordinary ease has he won his races; and we must more than ever regret the infirmity which debars so splendid a horse from taking part in the Cup contests of the year. In the Biennial for two and three-year-olds, Sugarcane was, for the third time in succession, a conqueror, and beat The Colonel about as far as Miss Toto did on the previous day. But the real two-year-old event of the day, we might perhaps add of the week, was the New Stakes, which brought out a good field of eleven, including many public runners—Kidbrooke with 5 lbs. extra, and the unhappy Mr. Winkle, with 9 lbs. extra, and among the dark horses, a half brother to The Druid, by Blair Athol out of Coimbra's dam, and one of the high-priced colts of last year's Middle Park sale, named Ecossais, by Blair Athol out of Margery Daw. No secret was made of the great superiority of the last named to his stable companion, Miss Toto, and no mistake was made in the assertion; for he took the lead immediately the flag fell, was never approached, and won by six lengths in a canter. This is of course by far the best form that has been shown this year, as may be seen by an examination of Kidbrooke's performances; but Ecossais, though a colt of wonderful power and substance, and well topped, has very queer-looking forelegs, which will probably occasion his trainer a great deal of anxiety. So fine a galloper, however, has not been seen this season, not even Marsworth, who apparently is the most formidable antagonist to Ecossais, so far as we can judge from public running.

The new race on the last day of the meeting, the Ascot Plate, obtained a good entry, and the same number of starters as last year, when it was run for the first time, came to the post. Reine, handicapped at 9 st. 7 lbs., won cleverly from Barmston, Hannah, Dalnacardoch—who ran second to Khedive last year—Drumstick, and eight others, and showed what a gift the Royal Hunt Cup must have been for her, with only 7 st. 10 lbs. to carry, and what a piece of ill luck it was for her just to be beaten in the last stride. The Alexandra Plate, on the other hand, dwindled down to a match, and is evidently becoming a more decided failure year by year. Horses are not bred nowadays to run three-mile races; and neither the addition of one thousand nor of ten thousand sovereigns will alter the constitution of the modern racehorse, or will induce breeders to introduce another kind of animal into the market, seeing that for those which they already supply there seems to be as much money forthcoming as ever. Besides, added money appears so little thought of that there was no competition for the two hundred sovereigns given to the second horse in the Plate, which, in default of opposition, the half-trained Vanderdecken placed to his owner's credit. The race was of course, under these circumstances, an utter farce, as Cremorne and Vanderdecken alternately trotted and cantered for four-fifths of the distance, and when Cremorne was let out in the last half-mile, Vanderdecken, so far from attempting to go in pursuit, was pulled up, and cantered in at his leisure behind his opponent. This performance occupied little less than ten minutes—regular Queen's Plate time—and we put it to the authorities whether they cannot appropriate more advantageously, and to the greater amusement of the spectators, the thousand pounds at present thrown away in a vain attempt to revive a class of race which is confessedly obsolete. Ascot is already so rich in racing that it is difficult to suggest how the money saved by the abolition of the Alexandra Plate might be applied; but the Royal Hunt Cup might perhaps be increased to the value of five hundred pounds, and a like amount might be added to the New Stakes, and to one of the Biennials for two- and three-year-olds. It is really distressing to see a nominally great race, like the Alexandra Plate, degraded to a burlesque; especially as after it, in addition to it, and on the same afternoon there comes a Queen's Plate. The Queen's Plate last week was positively quite refreshing after the more ambitiously designed event which preceded it; for though there was only the customary pair of competitors, one of whom was of course a French horse, they did not walk or trot any part of the way, and for two miles out of the three they galloped at a fair pace. In the end Eole II. was easily defeated, and must have lost much of his old form to have to succumb to so moderate an opponent as The Preacher, whose previous running, moreover, during the week makes him out gifted with speed rather than with staying power. Still, as Queen's Plates are run nowadays, a very infinitesimal portion of staying power is all that is needed.

The general results of the week were satisfactory, and the more so because so many of the principal prizes fell to two such excellent sportsmen as M. Lefèvre and Mr. Savile, the latter of whom especially deserved a turn of favourable luck. It must be additionally gratifying to him also to find himself the owner of a four-year-old so brilliant as Cremorne, and a three-year-old so honest as Kaiser, and to feel that the races they have won for him have not been gained by luck or lenient handicapping, but by their sterling merits. Mr. Savile has not as yet introduced us to any two-year-old likely to tread in the steps of his representatives for the past two years; but M. Lefèvre's extraordinary enterprise and liberality bid fair to meet with an ample reward. It is a sign of the times that there has not been as yet a single published quotation for the Derby of 1874; but, on the other hand, if people care less about betting, they seem as ready as ever to give high prices for racing stock. The average at the Cobham stud sale last Saturday has only once been exceeded in the annals of the Middle Park sales; and a purchaser was found willing to put down two thousand guineas for a son of Blair Athol and Coimbra. All experience hitherto has rather gone to show that the highest priced yearlings turn out the most worthless horses for racing purposes; but good looks and a winning strain of blood are irresistible attractions to an enthusiastic buyer. We may notice in conclusion that Mr. Hughes has introduced a short Bill for extending the Betting Houses Act to Scotland, and that it has been read a first time. We shall be curious to see whether it will meet with any opposition, and what course the Government will take towards it, if it should be opposed. At a time when those who have money to throw away are more and more giving up betting, it is hardly necessary to suffer encouragements to betting to be placed in the way of those who have little or nothing to spare for such a purpose.

REVIEWS.

RAWLINSON'S PARTHIA.*

WE are glad that Mr. Rawlinson's series of Eastern histories closes with a volume almost, if not wholly, free from the sins and offences of his earlier books on the Chaldæan, Assyrian, Babylonian, Median, and Persian Empires. The diligence of the Camden Professor has never been called into question; and in point of quantity he has done an amount of work which might suffice to occupy the longest life; but, except to those who share his peculiar views about historical evidence and the methods of dealing with it, his career as an historian must appear one of the greatest calamities that could in an age like the present have befallen the study of history. Slowly, but surely, those border lands which lie between the period of genuine contemporary history and that of epical tradition were being explored; slowly, but surely, we were learning that statements, however plausible and even likely, are not to be admitted as facts, apart from adequate reasons for accepting them; and this conviction had fatally shaken the reconstructed fabric of Roman polity on which Niebuhr looked with legitimate pride and affection. A real improvement was discernible even in books written for boys and girls, who were told that no real knowledge could be gained by taking one out of a number of inconsistent traditions for which no direct contemporary testimony is forthcoming, and accepting that tradition as fact; and that they must be content to confess their ignorance of the true history even of such events as the Roman Decemvirate or the Latin and Samnite wars. A real injury—we trust not a lasting one—was therefore done to the cause of historical science when

* *The Sixth Great Oriental Monarchy; or, the Geography, History, and Antiquities of Parthia.* By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, and Canon of Canterbury. London: Longmans & Co. 1873.

Mr. Rawlinson began to put forth his reconstructions of Oriental history. Unreasonable in his faith, unreasonable in his scepticism, he left to his readers no alternative but to submit themselves implicitly to his guidance, or to verify every one of his statements and question every one of his conclusions. The infirmity and laziness of human nature would lead most of them to shrink from the wearisome toil of the latter task; nor are there wanting many who feel a pleasant excitement in ranging over the annals of milleniums and filling up at will, or leaping over, yawning gaps of centuries. To yield once to this temptation is practically to crush the growth of the historical sense; and for unwary students Mr. Rawlinson was a leader under whose guidance this temptation would become irresistible. He could invent and put in his place in Assyrian chronology a second Tiglathi-Nin, merely because one Tiglathi-Nin had gone before Tiglath-pileser; because Asshuridannipal speaks of some monuments set up by Tiglath-pileser and Tiglathi-Nin; and because it is not to be supposed that Asshuridannipal would be so inaccurate as to invert the order of two of the Kings who had reigned before him. He could tell us of the works of Urukh or Orkham and of Shamas-vul, and yet reject the Euechios and Chomasbelos of Berosos because their names look "mythic rather than real," and "can scarcely have been borne by men," although they are in fact identical with the names of the Urukhs and Shamas-vuls in which he believes as firmly as Hekataios believed in the god from whom he was descended. He could insist on the credibility of the impostor Berosos, while he poured out the vials of his wrath on the unfortunate Ktesias, who assuredly copied his lies from the royal parchments in the archives of Sousa. Nor was this all. The history of a series of despots ruling over a nation of slaves, for whom political growth was impossible, is of very secondary interest or importance; but the case is altered when we turn to countries of which it is better to know nothing than to carry away false or distorted conceptions. We need not here cite again the assumptions and mis-statements, the guesses and inferences, at least as delusive as they are ingenious, which abound in Mr. Rawlinson's *Manual of Ancient History* even more, if such a thing be possible, than in his more ponderous histories of the great Asiatic Empires. We have said something about them already*, and we refer to them now only as they show that the improvement in his volume on Parthia is the result rather of happy accident than of a real reformation.

The Parthians, whatever they may have been, were a people of whose early history we know nothing at all. They took part in the revolt of the Magian Smerdis, and were subdued by Darius; and they served in the armies of Xerxes. But they had, it would seem, no chronicles which traced the line of their kings through a long series of centuries until they were absorbed in the vast empire created by the conquests of Cyrus; nor had they a priestly line or caste to whom might be ascribed the mysterious character of the Chaldæans, and whose history it was necessary to reconstruct by the convenient methods of ingenious conjecture. Of their language, happily, nothing is known. Of two words only is there any reason for thinking that they were really understood by the Parthians in the sense assigned to them. Of these two one is not Parthian, and probably represents the Persian *garda* or fortress; and thus in the present volume no additions are made to the melancholy philology which fathered the English *dame* and *lady* on the Phrygian *dav* and *lada*, which connected the Cushite *ar*, a river, with the Greek *ῥέων*, and saw in the name of the god Nergal a compound of the Greek *ἀνὴρ* with the Chaldæan *gula*, a word which might by the same method be identified with the Greek *μεγάλα*. Happily also there is not much to be said about Parthian ethnology. The people, we are told by some, called themselves Parni or Aparni, while by others they were said to belong to a Scythian horde known as Dahæ, a name found with but little modification in many other countries. Mr. Rawlinson thinks that the scattered tribes so called could not all really be the same people. He is probably right, although the wide dispersion of the Lokrian, Ligurian, and Lloegrian name may make us cautious in speaking positively. It is more likely that the word Dahæ, or Daoi, was no geographical name, but a term by which Aryan tribes spoke of their enemies, whether conquered or independent, and that we find it in *Laios*, *δάϊος*, and *despot*, *dasapati*, the lord of the *dasyus* or enemies. On the whole, Mr. Rawlinson decides that they were not Aryan, although the mere circumstance of their being commonly called Scythian would not of itself prove the fact. This conclusion seems to be supported by many of the Parthian names of which Mr. Rawlinson, somewhat oddly, speaks as affecting the termination *ac* or *ak* which characterizes the Basque and other Turanian languages. It seems rather out of place to ascribe to fashion or to voluntary choice the result of agglutination which necessarily made the pronoun a suffix. But he further insists that there is nothing about the people to give them a claim to be considered Aryans, while they manifestly belong to the stock which produced the Huns and Bulgarians, the Kalmucks, Ouigurs, and Usbegs.

The political history of this people is confined within limits which to an historian accustomed, as Mr. Rawlinson has been, to deal rather with milleniums than with centuries, must appear narrow indeed. It began practically with the revolt of Arsaces against the Seleukid Antiochos, and it came to an end when the ancient kingdom of Persia was revived by the energy of the Sassanid Artaxerxes. During this period it followed the usual course of Oriental empires. A time of aggression and of conquest which spread beyond the Euphrates to the West, and the Oxus to the East, and from the Caspian Sea to the Persian Gulf, was at last checked by the greater military science and the vast resources of Rome, and the attitude of attack was abandoned for that of defence. Later still, Roman Emperors take up the cause of exiled Parthian princes; but this interference in the concerns of courts could end only in the substitution of one ruler for another, and prepare the way for the first vigorous resistance which might be made to their power nearer home. It was well that the history of this monarchy should be written in detail; but the interest which Gibbon has imparted to the vigorous picture drawn in a few sentences must evaporate in the longer chronicle of the wars of despots from whose doings few lessons can be gathered, and of the fortunes of a people who in the history of the human mind count for little or for nothing. We admit readily that for this people Mr. Rawlinson has advanced no claim which is not borne out by facts. He allows that their art was singularly meagre and unprogressive, that their manners and social life were pretty much those of nomadic hordes generally, and that the fluctuations of their religious faith are shown in the change from the worship of fire to the use of fire for the burning of the dead. All that he asserts is that there was at all times a second power, civilized or semi-civilized, which balanced the power of Rome, which must always be considered, and in which they who wished to escape from the inquisitorial despotism of the Roman Emperors might find a refuge; and that for three hundred years this balancing power was the Parthian Empire. Mr. Rawlinson may possibly make a little too much of this counterpoise or check; but, although he has done very rightly in laying stress on a fact of some importance, his conclusion perhaps does not much affect the picture which Ovid draws of his miseries, and the comments which Gibbon makes upon it. The Powers which in our day counterbalance Russia are nearer at hand than the Parthian borders were to the subjects of the Roman Emperor; yet it is not easy for Siberian exiles to find their way to lands where they would be out of their master's reach. But Mr. Rawlinson has brought out clearly the part which the Parthian Kings played in the conflict between the East and the West, and has probably done all that can be done to throw a clear light on a somewhat dull and dreary history. If his pages are not likely to excite enthusiasm in his readers, the failure must be ascribed to the nature of his subject; but assuredly they will learn much here which they will be the better for knowing, while they will find little or nothing to lead them astray. They will not find here the strange assurance which ascribed to the Assyrians a civilization which "equalled that of almost any ancient country," or the monstrous theory that even "the intellectual life" of the Greeks was derived directly from Babylon. But they will find the Parthians rated at what they are worth; and they will be rewarded by geographical descriptions equal to those which formed a redeeming feature in the volumes devoted to the reconstruction of Assyrian chronology and the succession of Babylonian Kings.

* *Saturday Review*, March 26, 1870.

MEMOIR OF SIR JAMES SIMPSON.*

THE boon of anæsthesia, as an established adjunct to surgery and medicine, is of itself enough to make the name of Sir James Simpson live for ever in the memory of mankind. To have been the first to introduce into one great province at least of medical practice the means of numbing pain, and, by dint of his own energy and repute, to have beaten down the stupid but powerful prejudices which stood in the way of its adoption, is in itself a glory such as few physicians, whether of old or modern time, can show. Crude as the original application of sulphuric ether may appear in the light of more advanced observation and treatment, there can be no question as to the value of the first stride effected thereby in obstetric science, not to speak of what was done by Simpson to extend to surgical and medical cases in general this priceless gift to suffering humanity. As a benefactor to his race he deserves to have his name and fame kept in remembrance. But beyond this the life of Sir James Simpson has value and interest as that of a man of wide and varied usefulness, of extensive culture, of great mental energy, and of thorough manliness of character. His love of study and greed of knowledge were not less marked, as his biographer is at pains to show, than his high professional ideal. Of his manifold attainments, he owed more to severe and sustained effort of the will than to native brilliancy of genius. The concentrative faculty which enabled him when a boy to read without distraction amid the bustle of his father's bake-house was rightly regarded by him as the cause which raised him from his original low estate, and it was the quality of which he most strenuously urged the cultivation upon those within his influence. The son of a small baker at Bathgate in Linlithgowshire, yet sprung of an old Scottish line of the farming class, striving and independent, he was enabled, with few advantages at starting, to raise himself to the foremost ranks in professional and intellectual eminence. A kindly warmth of heart, with a power of winning and imparting confidence, was a moral gift which stood him in

* *Memoir of Sir James Y. Simpson, Bart., M.D., D.C.L. Oxon; one of Her Majesty's Physicians for Scotland; Professor of Medicine and Midwifery in the University of Edinburgh, &c.* By J. Duns, D.D., F.R.S.E., Professor of Natural Science, New College, Edinburgh. Edinburgh: Edmonston & Douglas. 1873.

good stead, both with patients and in society. To his biographer it may be that professional bias has seemed to point to a still more prominent feature in his character which Dr. Duns felt constrained even to keep in the background, through fear of its being presented "in any such way as to repel fellow-workers in science, or men of general culture." Into this "birth of the spirit and sacrifice of reasonable service" it was Simpson's own object to lead others without ostentation, and we must say that few have ever exercised an influence in this direction at once with the same earnestness and zeal, and the same freedom from egotism and cant. The working of the same spirit in the case of his biographer has, we fear, been the means of shedding over the record of his life a certain dulness in regard to style, together with a sermonizing tone of address, which has little in common with Simpson's own blithesome spirit and frank utterance of soul.

The neighbourhood of Simpson's birthplace is of a kind to develop in an active and eager mind a love and study of nature in all her forms. Hill and valley, cultivated fields and wild morass, rich meadow and old plantations thick with under-growth, are favourable to a varied fauna and flora. Birds, wild animals, and plants, ordinarily rare, are there met with in nature, while not a few are thought to have found their way from the Physick Garden, founded by Sir B. Sibbald, not far from Kipps. The geological features of the district have awakened the scientific interest of Edward Forbes and other visitants. Nor is it less full of material for study and research to the archæologist. A Cistercian monastery founded by David I., the site of the old castle of Bathket, the marriage portion of Bruce's daughter Marjory; Wallace's cave, the hero's traditionary hiding-place after Falkirk, with the "King's Knowe," where Bruce is said to have halted on his way to Bannockburn, are among the objects with which local history feeds the tastes of the archæologist. Of earlier date, or more mythical origin, the circular camp on Cairnpapple and the numerous Celtic names of places around went doubtless a great way towards rousing that interest in prehistoric antiquity which bore fruit in the series of papers the chief of which have since his death been given to the public in the two volumes of Archæological Essays. Conspicuous amongst these relics of the past is the mysterious "Catstane," to which the youth's attention was early directed, and concerning which he propounded those wondrous theories to which we adverted in our notice of the work. Nor were the classical tastes for which the youth of Bathgate at that time had a name less influential in moulding the mind and wideuing the sympathies of the scholar and professor that was to be. Books were at all times preferred by him to play. And of books the Bible and Shakspeare were with him the best. Next to these the greatest prize was Oliver and Boyd's Almanac. From the parish school he went at the age of fourteen to Edinburgh University in 1825, striking his friends and schoolmates with awe at the metamorphosis from the rough country schoolboy into the sharpish college student, wearing an actual long-tailed coat and sporting a small cane. What little pride in his attainments he brought from home and school was humbled, yet wholesomely stimulated, by contact with city-bred and city-trained competitors in the classes of Humanity and Greek, under Professors Dunbar and Pillans, those of Natural Philosophy under Leslie, and Moral Philosophy under Wilson. In the Arts classes he first got a glimpse of those wide fields of culture which, lying as they do outside the pale of professional study or practice, give nevertheless a higher fitness for each profession, and set a richer crown upon mere technical pursuits. A college bursary or scholarship in the second year rewarded Simpson's industry and came in aid of his slender means.

It soon became apparent that neither in classics, mathematics, nor moral philosophy was his reputation to be won. The companionship and example of a special college friend, John Reid, did much to confirm his growing preference for medicine as a profession. Reid's medical books and demonstrations helped him forward, and so did Knox's lectures, to which his friend took him as a special favour. As a medical student he was not long in making rapid progress under Liston, whose certificates spoke highly of his good qualities and promise. His sensitiveness to the sight of suffering was such as from the first well nigh to unfit him for the work of a surgeon. After witnessing the terrible agony of a poor Highland woman under amputation of the breast, he left the class-room and went straight to the Parliament House to seek work as a writer's clerk. But on second thoughts he returned to the study of medicine, saying, "Can anything be done to make operations less painful?" Herein was struck the keynote of Simpson's career. Rapidly as he rose to eminence in practice, and proud as he might well feel at the high price set upon his professional skill, all was clearly subordinated in his mind to what he was the first to achieve for the alleviation of human suffering. A member of the Edinburgh Royal College of Surgeons before he was nineteen, he made, in the interval before he was qualified for the M.D. degree, choice of obstetric medicine as his special department of medical science. His earliest paper on the Diseases of the Placenta won him the attention of eminent men both in his own country and abroad. It was translated into German, Italian, and French. A journey south brought him into contact and friendship with the heads of the profession in London, whence he made a rapid trip to Paris, his letters speaking of meetings with Arago and Milne Edwards, clinical visits with Littré, Dubois, and Larrey, and a round of Charenton Asylum under Esquirol. Oxford, Birmingham, and Liverpool formed successive halting places on his way back; the last of these greatly influenced his after-life, an evening with Mr. Grindlay and his family giving him an introduction which was followed four years later by one of the daughters of the house becoming his wife. A difficulty in the way of his obtaining the midwifery chair being done away by his marriage, he found himself in 1839 seated in that coveted place after a sharp struggle which had its consequences in more than one squabble with his brother professors or colleagues in the medical faculty. For the first time in the history of the University the midwifery class soon became the best attended of all. A rival professor who had changed his lecture hour to Simpson's, with the idea of cutting him out, had next to nobody. "Don't he deserve it?" writes Simpson in high glee. "He has broken his own head, and missed mine." His genial bearing, the forcible and lucid style of his prelections, the breadth of his teaching, and the sallies of humour which relieved the dryness of exposition, carried his class along with him, while his archæological tastes drew around him a not less enthusiastic audience of a more general kind. An early paper of his, entitled "Antiquarian Notices of Leprosy and Leper Houses in Scotland and England," showed immense research and knowledge. His appointment to lecture on General Pathology, the chair of which it had been in contemplation to suppress, gave him a further welcome opportunity of doing away with the invidious reproach of sundry of his colleagues that Simpson might know midwifery well enough, "as many old women throughout the country do," but that his knowledge of medical science and its literature was meagre. The extracts given by his biographer from his inaugural address show how little his special culture of one branch of practice had done to narrow his view of the general bearings of medical science or to impair his estimate of philosophical method. With the public at large it was his growing repute as a specialist that brought him in fame and fees. We find him called to London professionally in the autumn of 1845, and writing as of a scene in fairyland among the glories of Stafford House. It is only fair to him to say that the bad taste which dictated many of the details of his visit is far surpassed by that of his biographer in putting them into print. We may well conceive his amazing rise to the height of a fashionable accoucheur to have been too much at first for Simpson's head. Nor were his habits of business or his ideas of punctuality at all on a par with the demands of his new position. Grievous complaints of appointments forgotten, of letters from patients or professional brethren left unanswered, poured thickly in upon him. A serious albeit friendly letter of remonstrance upon these faults was addressed to him by an eminent London physician. Anyhow it could not be said that over-heed to fees was among the points which called for blame. There is a story of his being roused during a boisterous night, and stopping the rattling of the window frame with a bit of paper hastily drawn from his pocket, which Mrs. Simpson found in the morning to be a 10*l.* note; this very note having been the subject of more than one angry letter from a wealthy patient, who ought really to have paid 100*l.*, and felt indignant that his 10*l.* had never been acknowledged. Not a few of the letters which led to such outbursts of wrath or spleen were from that class of trivial or fanciful patients who form the plague of every physician's life.

In January 1847 Dr. Simpson was appointed one of Her Majesty's physicians for Scotland under circumstances peculiarly flattering; yet something more gratifying was behind. "Flattery from the Queen," he writes to his favourite brother, "is perhaps not common flattery, but I am less interested in it than in having delivered a woman this week without any pain while inhaling sulphuric ether. I can think of nought else." The proud mission of the physician is, he lays it down, twofold—namely, to alleviate human suffering as well as to preserve human life. A revolution in medical practice dates from Simpson's bold experiment. Not that the primary idea of employing ether as an anæsthetic in surgical operations is to be assigned to him. He was far from claiming it himself. To his friend Dr. J. B. Fleming in India he writes, March 9, 1847, "We do not yet know who was the original suggestor—Mr. Hickman, Mr. Wells, Dr. Jackson, or Dr. Merton. But it is a 'great thought,' if ever there was one." On the 21st of December, 1846, Liston had amputated a thigh, and removed by evulsion both sides of the great toe-nail, while the patients were under ether. It was in the practice of midwifery that no one, Simpson could assert, had ventured to test its applicability. The substitution of chloroform, nitrous oxide, and other agents, cannot in fairness be taken to detract from his right to priority in securing this boon to womankind, as upon him fell the brunt of the controversy, moral and theological even more than pathological, which greeted the innovation. Valuable notes of his own, touching the nature and history of anæsthetics, accompany this portion of his life. Abroad his reputation spread rapidly and widely, strengthened as it was by personal contact with the leading physicians of France, Germany, Holland, and Belgium during a Continental tour enforced upon him in 1850 for the recovery of health after a perilous risk from blood-poisoning. Three years later he received the exceptional honour of being nominated by acclamation a foreign associate of the Paris Academy of Medicine, followed in 1856 by the Monthyon prize for most important benefits done to humanity. Honours from across the Atlantic crowded thick upon him. All this while he was indefatigable with his pen no less than in the lecture-room or by the sick-bed. Nothing can be more delicious in its way than his short and easy method with the spiritists, or his piquant exposure, in the

latest years of his life, of the pyramid craze of John Taylor and Professor Piazzi Smyth. Unfailing temper and infinite *bonhomie* left, however, no sting in the wounds inflicted by his satirical logic. Light and playful as was his mood at seasons of this kind, he could show himself serious and unbending enough as the Free Kirk elder, or as the champion of the Bible in co-ordination with science. The record of his last days, as told by Dr. Duns, is marked by almost childlike simplicity of trust. Without claiming to be a deep or original thinker, Sir James Simpson had powers of concentration, analysis, and logical grasp which, added to a fearless sense of truth, led him to discoveries of no common order. In his professional writings, the most important of which have been republished since his death, there remains a monument to the energy, the breadth, and the subtlety of his mind. Able as he showed himself in general culture, in archæology, and in philanthropy, he was above all a physician. In him were to be recognized John Bell's four ideals of the perfect Esculapius—the brain of an Apollo, the eye of an eagle, the heart of a lion, and the hand of a lady. To these must be added the humility of genius and the tenderness of perfect manhood.

THE GAOL CRADLE.*

TO this little book we are quite ready to give the credit of good intentions. We may also admit that it contains some pathetic stories which are not altogether badly told, although their effect, considered from a purely literary point of view, is a good deal injured by an excessive indulgence in rhetorical language, which sometimes make them unintelligible and generally to some extent incredible. The book itself, as the title implies, is a variation upon the fruitful theme of *Ginx's Baby;* and the author fears that, like his brother author, he will be accused "of a weak sentimentalism and the like." To this he simply replies, "Be it so"; and adds that he can bear the censure if his book is the means of arousing a kindlier feeling towards our social outcasts. Sentimentalism is a term which has been much abused, like all others which become part of the popular vocabulary of praise and blame. It is a name for an excess of sentiment; and as there is no definite test for deciding what amount of sentiment may be fairly imported into any discussion, the blame which it connotes may frequently be undeserved. However, as we certainly do feel disposed to accuse the author of sentimentalism on the present occasion, we will endeavour to define our meaning a little more accurately. In the first place, then, we fully admit that it would be difficult for anybody to feel too strong an emotion in regard to many of the evils which are here described. We certainly should envy no one who could think without lively regret of the fate which dooms to criminal lives large masses of our fellow-creatures who, under a healthier state of things, might be converted into useful citizens. Statesmen and philanthropists, and all persons of religious feeling, may well be profoundly mortified when they reflect upon the immensity of the evil and the futility of many attempts to diminish it. The point, however, at which a right sentiment passes into sentimentalism may be defined as the point at which a man allows his judgment to be prejudiced by his feelings. In proportion to the magnitude of the evil is the necessity of coolly examining the remedies by which it may be most effectually encountered. The most palpable of all causes of failure is the utter want of system in our operations. Millions of pounds are annually thrown away, and a vast amount of devoted service is wasted, simply because we have no definite principles, and are so anxious to purchase immediate relief from disagreeable sights that we will not take time to examine into the causes of the evil. When a man writes in such a passion as to be often unintelligible, when he vehemently asserts that whole classes are foolish, selfish, and tyrannical, when he sees facts through the medium of his indignation, and proposes vague remedies without caring to work them out into a practical form, we begin to doubt whether he will do much good. He has relieved his own feelings, he has a complacent sense that he is a great orator and philanthropist, but he has not really contributed to the elucidation of the question. Such declamations are often so mischievous, and they are now so common, that we will say a few words upon a book whose intrinsic merits scarcely deserve much notice.

The author's theory is in one sense pretty simple. There is, it appears, a concrete object called the State, which he is always abusing as hopelessly stupid and brutal. The State, with its magistrates and policemen and Poor Law officials, does its best to demoralise and degrade the poor. It catches the youth of the lowest classes, sends them to gaol with callous injustice, and there makes them tenfold worse than they were before. The State is a Giant Blunderboro, locking up Englishmen in its dungeons and converting them into food for the gallows. On the other side is the neglected street boy who is the victim of this foul ogre. He is, in many cases at least, a really noble animal. He has the most generous impulses and the proudest spirit of independence. An accidental ebullition of animal vivacity or righteous indignation brings him into conflict with the strong arm of his monstrous oppressor. From that moment he is doomed, and by a shorter or a longer road is driven helplessly downwards as the game are driven into a pitfall by a savage tribe. This is a brief account of the writer's general theory, which is enforced by a number of special instances. One boy out of a batch of six, whose history is given to us, happened to see a garden door open and a rabbit running about within. He caught and sold it. He stole because he had nothing else to do. Should we consider him to be hopelessly bad? A second, being neglected by his mother, and nearly starving, stole a few coals from a yard to warm himself. Was he an abandoned wretch? A third, being in difficulties with his rent, took a few empty wine bottles and paid his landlady with the proceeds. Was he an utter villain? A fourth took a brooch out of a shop window to give it to the young woman with whom he was in love. Was he irredeemably bad? A fifth stole from hunger. Was he incurably vicious? The sixth punished a small tradesman who had been cruel to a servant-girl by stealing a board of advertisements from the shop. Was he utterly depraved? To such questions as these the first obvious reply is, We don't know. The anonymous writer professes to have "investigated" these and other cases in which crime has been caused by generous feeling or sheer want rather than general depravity. What does he mean by investigation? It is a very indefinite word, to which few people attach much meaning. Possibly he asked the boys their own story; or he may have inquired of their friends, when they had any; or have spoken to a policeman; or have talked to the clergy and the district visitors. We are left utterly in the dark as to the means employed, and cannot tell the value of the results. We only know that there never yet was a criminal who, on his own showing, was not wrongfully condemned, and did not owe his misfortunes to the brutality of the police. It is at least conceivable, however, that the young gentlemen in question had stolen a good many more rabbits and brooches than those which finally brought them to grief; and, for anything we can say to the contrary, every one of them may have been an accomplished young reprobate. We notice this, not by way of opposing the apparent inference—of which, on the contrary, we highly approve—that efforts should be made to reform youthful criminals; but because this method of reasoning puts the whole question on an utterly false ground. The author has fallen in love with his clients to such an extent that he holds them in every case to be injured innocents. As well, he says in one place, imprison an angel as one of these boys. When an angel takes to stealing jewelry we shall be in a very awkward position; but meanwhile we deny the angelic nature of our existing street population. The real evil is not that spotless lads are made into habitual criminals by law—though such cases may occur—but that the conditions under which many boys are brought up prevent them from being spotless. The author talks very truly about the many temptations to which London children are subjected. Brought up on the verge of starvation, amidst pickpockets and prostitutes, it is no wonder if they develop into prostitutes and pickpockets themselves in their riper years. The attempt to prove that they are all excellent children till the policeman gets hold of them would, if successful, prove only that our social condition is much better than we have any right to believe. "God help the heedless chivalry of the streets!" exclaims the writer. "Every day the State is busy, by vast machinery and lavish expenditure, capturing and cursing it"; and he proceeds to ask what would have become of "the noble, the daring, the rash, the generous soul" of himself and many of his readers "had they fought their indignation fights against cowards and sneaks under the resistless and undiscriminating dominion which sways its sceptre over the enthusiastic child of the street." The lawless chivalry of an enthusiastic child of the streets may be occasionally a reality; far be it from us to deny the possession of many good qualities even amongst the most neglected; but to ask us to accept these statements as an accurate account of the average state of things is to make too extensive a demand upon our credulity. "Weak sentimentalism" naturally believes that everybody it wishes to help is an innocent martyr, but such assertions only provoke disbelief and lead to disappointment.

Meanwhile, be the children of the streets angels or criminals, we quite agree that it is eminently desirable that they should be brought up to better ways. The more criminal, in fact, the greater the need of an improved system of education. What then are the practical suggestions of this advocate of the weaker classes? Unfortunately it is just here that we are most puzzled by the rhetorical haze which prevents him from speaking plainly. One proposal, which is thrown out only to disappear in a mass of declamation, is for a "new tribunal," to be composed of "citizens whose functions should be magisterial, whose legal qualifications should be their ability to read the living literature of English children, whose Act of Parliament should be their moral instincts, with the domestic powers of a *habeas corpus ad satisfaciendum;* above all who had committed and not forgotten the appetitive and pugnacious follies of youth, and could laugh them o'er again." That is, the State which is now diabolical is to become, for this purpose, angelical, and to provide good fathers and mothers for all the bad children. We need hardly observe that people who make their moral instincts into Acts of Parliament are apt to be the most tyrannical of legislators. Then the Ragged School Union is solemnly adjured "by ten thousand lives, pending between labour and the treadmill," to—do what? to "change its name"! It is to call itself the "Labour School Union," and then ragged rascals will probably disappear. Compulsory education is a good thing; but reading and writing, as has been frequently remarked, do not of necessity make children honest and industrious. They are therefore to be made industrious by a "compulsory labour law." Provision must be made for labour "wherever the normal condition of commerce does

* *The Gaol Cradle: who Rocks it?* London: Strahan & Co. 1871.

not supply it, and attendance at labour must be enforced—at the public school or in the ordinary shop—somewhere the boy must be compelled to labour." We will venture to add a corollary on our own account. It is plainly useless to teach boys to labour unless you provide a demand for the products of their labour where they have been taught. Therefore the State must provide national workshops—an expedient which has not been as yet found to answer. However, the author tells us that "interference to be efficient must be State interference." It is a general principle that whenever a man begins by abusing the State as the embodiment of all evil, he ends by proposing that the State should be a terrestrial providence for the cure of all misery. The Poor-law, of course, is to be retained and even extended, though, equally of course, the evil of the present system is to be destroyed by changing the name. The poor-house is to be retained for "sturdy vagabonds and noxious profligates," but the honest people are to be helped without being humiliated. The obvious remark that this would demoralize the whole nation at one stroke is evaded by a statement that the State is to act as a national club. We are all to form a gigantic Friendly Society. If this merely means that the State is to take charge of savings, and to allow people to buy annuities or to insure their lives, the thing is already done. If it is to force everybody to subscribe, we have merely a poor rate over again, and we do not see that any radical change will be effected by making the new organization a "department of the Board of Trade" instead of a part of the old Poor Law Board. However, in some way or other, the wicked State is to order everybody to be prudent and to lay by for old age. If some wretched agricultural labourer says that he is too poor to spare the money, we presume that the State will pay it for him, and then it won't matter whether he is prudent or not.

If the weak sentimentalism begins by perverting the facts, it certainly ends by proposing the most impracticable remedies, and we will venture to suggest to the author that a little more is required than sympathy and good will to the wretched before he can either detect the true sources of pauperism or suggest useful remedies. It is a real misfortune that everybody who dislikes to see people ragged and starving thinks himself qualified to pronounce offhand on these complex questions, and to call everybody else who suggests different remedies cold-hearted and cynical.

A TRUE REFORMER.*

ONE may fairly suppose, on the first reading of this remarkable work, that the author's intention has been above all to use his great powers over fiction and satire to win readers for his proposals for army reform. Such has been the view generally taken of it by the writers who have commented on it as it appeared in instalments. To us it seems just as probable that the design of making political life in high places the groundwork of a story of fiction was the real one, and that army reform has been introduced as the main subject of debate because it was already thoroughly mastered as a study by the anonymous author, and was but lately the first question of the day, and therefore offered a fair groundwork for his imagined political crisis. For ourselves, we have found that as we have read its lighter portions, and felt ourselves dwelling among the lights and shadows of Indian life, or admired the skilful touches which make us inmates of an old maid's home in an English country town, another and simpler solution of the threefold nature of the work flashed over us. The True Reformer would create again his own past experiences in the form of a tale, and, whilst doing this, the brilliant visions of youth, which were once as present as the events of the life he shared in, have rushed in upon him and become woven into its threads. He becomes—as he may once have dreamed of becoming—the companion, the equal, the guide of the leaders of the land. And what so likely to bring these visions within the scope of reason as the supposed crisis abroad which would make the War Minister of the day the most important functionary we possessed, and the profoundest thinker on military matters the most fitting War Minister? And since to invent lay figures of politicians to fill this act of the drama would be as tedious a process as uninteresting, what more natural than that those who are now before the world should each bear their parts as in real life they would bear them if the crisis came? Be the foundation of the tale what it may, no one who studies it can wholly separate either of the three purposes from the rest. The author has contrived to write a story as remarkable for its pathos as for the fine natural touches of description and humour with which it abounds. He has grafted on these a series of political portraits, so true, so sharply sketched, and yet so pleasantly withal, that, as none can mistake the originals, so none should take offence at the introduction of their counterparts. Finally, he makes both story and sketches contribute to the development of a thorough and complete scheme of army reorganization which has but the single fault that it is altogether beyond and above our unpractical ways and our faltering legislation, unless it be granted that there might come such a crisis to be faced as the tale supposes. For we are of those who believe that there lies hid among Englishmen a fund of patriotism not far behind that which the heathens of extinct empires could boast. A real scheme of army reform which should disregard or leap over all the petty jealousies, class interests, and personal views that now mar a necessary work, looking only to the desired end of an organization at once amply sufficient to ward off present peril and yet based on certain future economy no less than on efficiency—this we believe not to be wholly impossible to carry through among ourselves as we are, and that within the lives of living statesmen. It would be possible enough, if this slow-moving, divided, and often uncertain nation of ours once became vividly conscious of a league formed deliberately to crush our power, or at least to blot us out of our fair place in the confederacy of the world. It would be perfectly possible, in short, if it were put plainly before Englishmen as the needful and proper alternative to the misery and disgrace of a Battle of Dorking. And as such an alternative it is very happily pictured in the story of the True Reformer.

But to examine this scheme as it deserves would far more than exhaust our limits. We can at present only commend the task to all who have the reform of the army at heart. Here they have food for study indeed—study that must go to the very root of the work before them. And lest they should faint at the magnitude of the interests to be overcome, we would remind them of what one of the greatest of Continental writers, himself a soldier in the army of a peaceful, prosperous, and commercial country, has said on this very subject:—"It is the task of the military writer to smooth the way for the politician, and by judicious advancing of the proper reforms, and true delineation of their proportions in time of quietude, to put into the statesman's hands the means of executing them, when danger from political combinations abroad, or the restlessness of a powerful neighbour, shall suddenly strengthen the demand for their necessity." What is true of Belgium and her perils, and of the Belgian fortresses and army, is tenfold truer of England with her many complicated interests, and of her various means of defence.

Of the two remaining threads of the True Reformer's tale, we are unwilling to pass wholly from the sketches used to develop the plot itself to the political episodes which to many must seem the highest feats of the versatile author. It is no wonder that his name is connected with India by all who have perused the opening chapters; for surely Anglo-Indian life was never before so reflected to readers at home as in these inimitable sketches. Take from the opening chapter, as a chance example, the description of the arrival of the native letter-carrier at the camp of the party of "pig-stickers," and see how it places an English reader at once in the scene described! For other phases of Anglo-Indian life, which are portrayed with a lightness of touch as well as truthfulness which must strike those who know the East no less than stayers at home, we would go to the wedding at Sirmoori (for under the thin veil of that name our chief hill settlement figures), or the garden party at the Viceroy's. But to those who must spend the best years of their lives in the torrid land that makes England truly an empire in the world's eyes, it is more important to know the trials they may have to bear than the pleasures they may possibly share. And what an East Indian journey in the midst of the hot season is, even in these days of railroads, has never been described before as the hero describes his with the gentle bride whom he is hurrying home in pursuit of his schemes of ambition. Here are parts of the second and third day's journeys:—

> And now the day goes wearily on, marked only by the change in the sun's shadow, the rising of the day wind and its accompaniment of dust, and the ever-increasing heat. The country is everywhere the same—a perfectly flat, desert-looking plain of reddish-brown hue, with here and there a village, its walls of the same colour. It looks a desert, for there are no signs of crops, which were reaped two months ago, and no hedgerows, but perhaps here and there an acacia-tree. Not a traveller is stirring on the road, not a soul to be seen in the fields, but an occasional stunted bullock is standing in such shade as the thin trees afford. At about every ten miles a station is reached, each exactly like the previous one and the next following, and with the same set of expectant travellers crowding the platform, each with his bundle on the end of a staff, converted by the arrival of the train into the same excited, noisy, belaboured seekers for room as the travellers of the night. At twelve o'clock the thermometer in the carriage rose to 110°; at three it stood at 114°. At the Shahjehanabad Junction we stopped for an hour and found a meal prepared of sudden cutlets and curry, with a decoction of tea, the whole plentifully garnished with flies; but Eva was past taking anything but soda-water and biscuits, and I was not much more hungry myself, so the tempting viands were put away to serve for the passengers by the next day's train. At the Akbarabad Junction there was another halt and the same bill of fare. Gradually the sun went down, and the wind and the dust subsided, and another stifling night succeeded, with uneasy slumbers, broken by the ever-recurring hubbub of the half-hourly stoppages. But the short summer night is soon ended, and the fiery enemy makes his appearance again, this time on the left; we have passed the Prág Junction in the night, and the train has now changed its course and is working across the peninsula to the western coast. Now followed another long day much the same as the previous one, except that the thermometer showed a little less degree of heat; that the carriage, the seats, and everything within, were rather more dusty than before; and that, instead of the everlasting plain, hills can be seen on either side in the distance through the haze. But if the heat was less, the fair traveller was less able to bear it. All this day she was hot and feverish, and lay almost speechless on the couch I had made of the seat. Wet towels hung up to the windows made the carriage a little cooler, but it was difficult to keep them moist under the rapid evaporation caused by our motion through the parching air. Happily we had plenty of ice, otherwise I think Eva would not have lived through the day, so utterly prostrated did she seem by the heat.

We pass from the Indian sketches to the political, omitting, for lack of space, the scenes at Leatherby, which the reader can fit to any country town he knows that happens to return its two members, so true are they, with their light and but scarcely cynical humour, to such phases of English life as our Little Peddlingtons show. As we enter with him the Commons, the War Office, the Cabinet, we know that the author can hardly have lived through the scenes he

* *A True Reformer.* Originally published in "Blackwood's Magazine." 3 vols. Edinburgh and London: Blackwood & Sons. 1873.

depicts; yet we feel, as he gives the Parliamentary experience of his hero's first successful speech on the true principles of army reform—delivered of course before the foreign crisis came—that if such sentiments were indeed delivered to such an auditory, so forcibly and so clearly, their reception would probably be just what follows. And if the introduction here of the two leaders of parties seems too satirical, the satire is softened into pleasantry as the story passes on:—

It was sufficient proof of the impression made by this speech that not only did Mr. Braham, later in the evening, refer to it in complimentary terms, congratulating the House, as he put it, on the accession to their discussions of the honourable and gallant and ingenuous young member, but Mr. Merrifield himself replied to it at some length, and was indeed somewhat vehement and very discursive. War was a detestable thing, and it was to be hoped the nations of the world would come to see its iniquity in course of time. Meanwhile our insular position gave us an immunity from the dangers of war which other nations did not possess, and therefore the analogy from the condition of Continental Powers did not apply to ourselves. At the same time, it might be freely admitted that no Government would deserve the confidence of the House or the country which was not prepared to maintain the national honour, and to carry out any engagements which the sense of the country should declare ought to be fulfilled, but which it would be quite time to provide for when each particular case arose. Finally, he hoped the House would accept these assurances, and not be led away by specious appeals to the imagination, or temptations to indulge in the luxury of passion. All which, pronounced in a splendid, clear, ringing voice, with a good deal of emphasis, a copious flow of words, and an abundance of illustration and amplification, sounded highly impressive; but yet it was not quite plain what it all meant—whether the great speaker intended to imply that we ought to be satisfied with trusting in Providence, or that we could afford to be independent of that aid. In fact, it was the inconclusiveness of the speech which brought up Mr. Braham, who was quite in his best style of sarcasm and repartee while pointing out what he termed the political effeminacy and flabbiness of his right honourable opponent, although at the same time leaving it quite an open question which way his own opinions tended.

Into those mysteries of the Cabinet which he himself terms his Eleusis we dare not follow the author, nor guess how far his inner consciousness has created a true picture of the way in which business is done at such sacred assemblies. But if we forbear to quote largely from the triumphant debate on the new army measures, when Mr. Merrifield, head of the great Constitutional Coalescence (to use Mr. Braham's phrase) of the two parties, has been converted to views going beyond even the True Reformer's, it is because the one passage we are about to give, the great Minister's closing words, are so true to life—that is, to the life that would be if our country were indeed pressed upon by real danger—that it speaks for itself of the reality of the whole:—

When, therefore, Mr. Merrifield said that the Bill which had just been passed was defective, in his opinion, only because it did not go far enough, those who would have opposed it on the score of its sweeping character were left stranded by the tide of public opinion passing beyond them.

"I am free to confess," said the orator, "that in my poor judgment the assumption involved in the Bill, that the citizens of a free state like ours, while all in their several degrees liable for their share of the various obligations implied in the condition of citizenship, should yet be absolved from the highest and most important of all obligations—the call to bear arms in defence of their country—such a narrow view of the duties of citizenship appears, to my humble apprehension, perfectly indefensible on any grounds of morals or justice; that any man should not only deny the duty, but should desire to evade it, is a supposition almost too monstrous for the mind to conceive. Our Bill must therefore be regarded, as my right honourable friend has put it, in the light of a compromise of sense and justice with expediency."

That the wisest of public reformers should have an ill-managed household; that the greatest of public triumphs should touch on the deepest of private sorrows; that a Minister powerful in the country may fail to keep the one heart's affection which a nation's gratitude could not repay him for losing; that the sun of political success may be dimmed to blackness by the shadow of domestic grief: these, too, are truths familiar to those who study human nature as it lies around us. The touching contrast drawn between the brilliancy and smoothness of the hero's public success, and the darkness that overtakes his private life, is delineated with such mastery over the intoxicating and the tender phases of an imagined career as gives fresh proof of the power that has woven for us in the *True Reformer* at once a romance, a treatise, and a gallery of portraiture, each admirable in its way, as each is necessary to the completeness of the author's task.

LETTERS AND PAPERS OF THE REIGN OF HENRY VIII.*

(Second Notice.)

WITH the exception of the two documents referred to in a previous article, there is no letter or paper of any kind in this volume which alludes in any way to the first motions for the divorce. It was perhaps scarcely likely that any paper on the subject should have found its way into the State Paper Office, when the subject itself was for many months spoken of as "the secret matter," and nothing was divulged about it till it accidentally came to the Queen's knowledge that a systematic investigation into the validity of her marriage was taking place. One of these documents proves what was not known before, that Clerk, Bishop of Bath and Wells, had been taken into confidence; and the other furnishes us with the date and circumstances of the earliest step taken in the matter which can be described as being at all of a public nature. We had ourselves seen the record of the judicial proceedings at Westminster on May 17 and the following days at Wolsey's house, but are quite unable to account for the entire ignorance of all historians of its very existence. Its great length and the technical nature of its details furnish the reason, and perhaps also the excuse, for its omission from the *Records of the Reformation* recently published at Oxford; but no doubt it will be fully described by the editor of those volumes whenever the promised history of the period to which they refer shall make its appearance. It contains the first act of the farce which the King was playing, pretending scruples of conscience about his marriage, and alleging his earnest desire to keep Catharine as his wife if it were lawful so to do. Whether Mr. Froude was really in earnest, or whether he was trying to pass off a joke upon his readers, when he maintained that Henry was acting in good faith, we shall not attempt here to determine. In neither case are we likely to hear any more of the theory of the King sacrificing himself for the benefit of his people, which had been sufficiently exposed before this and similar documents ever came to light.

The proceedings of May 17, 1527, are a clue to all the subsequent history. Wolsey asks the King's leave to exercise his jurisdiction as Papal Legate in the trial of the case, and the King replies as defendant, asking to be allowed to appear by means of a proctor, and to allege all that can be said in his defence at a subsequent day. Accordingly on the 20th the King's proctor appears, and proceedings are continued till the 31st, when the document abruptly terminates with the mention of the names of the Bishops of Rochester, Lincoln, and London, whose opinions on the theological and legal questions involved are to be asked. Fisher's opinion was procured in writing, and sent to the King on June 2, enclosed in a letter of Wolsey's, and this letter, and that written on the preceding day by Wolsey to the King, assuring Henry of his zeal in the secret matter, and his conjecture that the thing had come to the Queen's knowledge, are the earliest documents relating to the divorce that had been printed before the appearance of Mr. Brewer's volume. There are some other letters of some importance which refer to the subject, which were written during this same month, one of which appeared first in the *Records of the Reformation*. It is the letter of Sampson to Wolsey, written from the Court, explaining that things were going on as regarded "the secret matter" in good train and without suspicion. This is of the 25th of July, and on the first day of the next month the Cardinal of York wrote to Spain denying to the Ambassadors that there was any foundation for the rumours about the divorce, but wishing them to ascertain how far the Emperor had been informed on the subject, and how he appeared to take it.

Before this, Mr. Brewer has inserted four of the celebrated seventeen Vatican love-letters addressed by Henry to Anne Boleyn. They are undated, and cannot of course all belong to the 1st of July; but, in placing them here, he has arranged them in a more probable order than we have ever seen them placed before. He numbers them 4, 10, 3, 1; but they correspond to the arrangement in Tierney's edition of *Dod's Church History* as 3, 4, 7, 1. Mr. Tierney has placed No. 7 as between June 9 and September 13. These four are all written in French, some of the others being in English. As they stand in their place in Mr. Brewer's volume, they draw out in full relief the duplicity of the King, who in the first of them professes to have been a whole year in love with Anne Boleyn, though probably the idea of making her his queen had not yet either entered his head or caused even a momentary suspicion on Wolsey's part. The next two letters, also written in French, are placed by Mr. Brewer at the beginning of August 1527; and if he is right in arranging them as Nos. 5 and 6, instead of 5 and 2, as they were formerly placed, they seem to imply that the King's illicit offers of love had been repulsed by the lady, and that Henry, in apologizing for any offence he had given her, does not give up all hopes of obtaining her on some terms or other. He now asserts that he esteems her more than any woman in the world, and as he says that he prays God daily that his body may be devoted to her as his heart already is, we may suppose that he had already determined that the divorce from Catharine should issue in a marriage with Anne Boleyn. This theory admirably fits these letters in with the other papers; for it is plain that, whilst Wolsey was absent—that is, between July and September of this year—the King had quite made up his mind on the subject, and for the first time in his life perhaps he wrote a despatch to Rome of the contents of which Wolsey was ignorant. The Cardinal was at the French Court, fully bent on marrying his master to a French princess. The next letter in the collection, which is placed by Canon Tierney as between September and December 1528, Mr. Brewer has calendared (p. 1772) as belonging to February of that year. It is in English, and was probably the first that was written after the King had resolved to make Anne Boleyn queen. The allusions in the remaining letters render it more easy to fix their dates, so we need say no more about them, but take our leave of them with the notice that the last, No. 17, contains a kind of apology for the non-introduction of the Papal Legate, Campeggio, to the future Queen, grounded on "the unfeigned sickness of this well-willing Legate."

But Mr. Brewer's volume contains one of the most interesting additions to the history of the earlier period of the negotiations for the divorce, in a letter of the 29th of July, written from Valla-

---

* *Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII.* Preserved in the Public Record Office, the British Museum, and elsewhere in England. Arranged and Catalogued by J. S. Brewer, M.A. Under the Direction of the Master of the Rolls, and with the Sanction of her Majesty's Secretaries of State. Vol. IV., Part II. London: Longmans & Co., and Trübner & Co., Paternoster Row. 1872.

dolid by the Emperor himself to Don Inigo de Mendoza, his Ambassador in England. The letter has indeed no business to appear where it does, for it belongs to the Simancas Records, and will of course appear in the next volume of Spanish Papers, which will be published by Don Pascual de Gayangos. Nevertheless we are glad that the Spanish editor has suffered it to appear in Mr. Brewer's volume, for it fits in with English papers which were already in print, and gives us the account of the first intimation of the probability of a divorce reaching the Emperor's ears. The matter was kept so quiet in England that we do not know how the Queen first became acquainted with the project; but we know that early in July 1527 Catharine despatched a secret messenger to the Emperor informing him of the proceedings which were being instituted. The plan adopted was that one of her servants, a Spaniard named Francis Phillipp, should apply for the King's leave to go into Spain, and that the Queen should appear unwilling to part with him. The King saw through the device, for a previous messenger had gone on the same errand. Ferdinand, her physician, had gone a few days earlier; but whether he ever reached Valladolid does not appear. So, in order to disarm the Queen's suspicions, Henry allowed him to go, but sent strict orders to Wolsey, who was then on his embassy to Francis, to detain him if he passed that way, to inform Ghinucci of the probability of his arrival in Spain, and to arrest him. The Spaniard left England before the middle of July, and, as the letter informs us, had reached Valladolid in less than a fortnight, having eluded all those who were instructed to detain him. Wolsey, writing from Compiègne September 5, had just heard that the Emperor was aware of the project for the divorce, which he had learned partly by the report of English merchants, and probably also from Francis Phillipp, who had arrived and held communication with the Emperor for a whole day (p. 1539). Accordingly the Emperor sent an autograph letter in cipher to Henry, remonstrating with him on the subject, and enclosed it in another, in which he instructed Don Inigo de Mendoza how he was to act in the matter. The pretence of conscience did not for a moment deceive Charles. But he thought proper to write with moderation, and promised to keep the matter entirely secret for the present, no one being made cognizant of it except the English Ambassador, the Viceroy of Naples, and the Pope, to whom he also wrote entreating him to revoke Wolsey's legatine authority in England, hinting very significantly that the affair originated with the Cardinal, who had ill will towards the Queen, his aunt. The letter, which was sent by the same messenger to the Cardinal, has unfortunately been lost; but in all probability it would not have added much to the light which has been thrown upon the matter by this interesting despatch. The news of the intended divorce seems to have spread wonderfully quickly, the very next despatch in the volume showing that the Lady Margaret had also heard of it and fully believed it. But Wolsey had not ventured to disclose it to the French King on August 16, when, as he told the King, he proposed to do so, "in so cloudy and dark a sort that he shall not know your utter determination."

This volume contains another important document from Simancas. The negotiations between France and England so alarmed the Emperor that on the 30th of September he wrote to Mendoza urging him to do all he could to bring over Wolsey to his interest, offering to pay up 45,000 ducats of pension which were in arrears, with the offer of the first bishopric that should fall vacant in his dominions, and a marquisate in the Duchy of Milan of 15,000 ducats annual rent.

And now we reach the end of the year 1527, that agonizing time for Wolsey, when it became necessary for him, upon his return from his embassy to France, to throw himself unreservedly into the King's plan for the marriage with Anne Boleyn. Till now he had fondly hoped for a divorce which should have enabled him to marry the King to a French princess and cement the alliance of the two nations; but before the end of the year he saw that Henry's determination was fixed, and that, if he was to retain his influence over him, he must be on good terms with the King's new mistress, who was too cunning to be had on the easy terms to which her elder sister Mary had consented. She played for a high stake and she won the game. Mr. Brewer has produced one additional draft of the dispensation which eventually found its way to Rome for the Pope to sign; and even if Mr. Froude affects any longer to doubt that the celebrated conditional dispensation was drawn up to meet the particular circumstances of Anne Boleyn's case, the first of the three drafts will probably convince him that Anne was connected with the King in the first degree of affinity by the illicit intercourse with her elder sister. The new draft, which we see for the first time analysed in this volume—and, considering how obstinately the point has been disputed, we wish Mr. Brewer had printed it at length, with all its interlineations and corrections—contains the additional proviso, which was afterwards omitted, allowing the King to marry one who had been within seven years previously contracted in marriage, supposing only the marriage had not been consummated. This case exactly applies to the circumstances of Anne Boleyn's pre-contract with the son of the Earl of Ormond, in 1520. The insertion of the words *in septennio* in the original draft prove how carefully worded it was with the view of excluding all possible objection to the intended marriage of the King with Anne Boleyn. Their omission by the corrector of the draft was owing to the fact that the person who overlooked it saw that it was unnecessary to specify the time, it being sufficient that *any clandestine* marriage should be declared to be no impediment to the King's desires. And what is still more remarkable about the corrected draft is that the original provided only for the case of affinity contracted by illicit intercourse in the general, whereas the corrected copy expressly excepts such intercourse as creates affinity in the first degree—the general exception not being thought sufficiently explicit for the case of the King's connexion with Mary Boleyn. That connexion was in canon law precisely the same impediment as if the parties had been lawfully joined together in marriage, and required special mention because of the extreme rarity of the case; there being at the most not more than two or three instances on record where a king had been allowed to marry his deceased wife's sister; and even then the case was not quite parallel, for Mary Boleyn was still living.

There are, of course, many other documents bearing on this subject, but we shall reserve our comment upon them till after the publication of the third part of the fourth volume, which we suppose may be expected in the course of the present year. In conclusion, we may observe that we are disappointed that the originals of so many documents which have found their way into print have not been discovered. It is possible they may yet be found by the exertions of the Historical Commission. We should have been glad also if the very imperfect documents printed in Le Grand had been sent to Paris to be corrected from the originals in the National Library. In some cases Mr. Brewer himself has been at a loss to explain passages in these letters. As to the skill with which he has arranged letters without date, and corrected important mistakes made by the most able of those who have preceded him over the same ground, that is entirely beyond our praise; but we think the records at St. Paul's, which apparently have not been consulted, would have afforded useful information additional to the extracts from them which appear in Fox and Strype, and which have been duly analysed and calendared in these volumes.

SONGS OF THE SUNLANDS.*

SOME short while ago the critics were all busied in settling Mr. Joaquin Miller's claim to the style and title of a poet. A completely new man, who had in a sense dropped from the clouds, he tells us that, until he thus took London by surprise, he had been nothing but

> a tender of herds
> And of horse on the ultimate Oregon shore.

And to some it seemed as if the clear-voiced lyre of early civilization had been taken in hand once more. The general verdict, though less enthusiastic than this, was nevertheless a very kindly one. Few strangers have ever received attentive notice from so many of the leading journals and reviews; and few indeed have had such liberal recognition granted to their merits, or such bountiful indulgence to their weaknesses. It was pretty unanimously agreed that Mr. Miller *is* a poet: that he "sings because he must"; that his offences and defects are outweighed by his acknowledged gift of spontaneity, and by what Mr. Swinburne calls the "excellence of sincerity and strength."

The present volume leaves this estimate of Mr. Miller's powers and of the literary work which he has done pretty much where it was. There can be no doubt that he has in past years, spent for the most part on the outside confines of civilization, if not beyond them, become enamoured of the natural beauties of the Western Continent in a manner only possible to a man gifted with the genuine poetical temperament, or, in other words, with that peculiar strength and subtlety of sensuous perception which makes such a man a keener and more passionate observer than his fellows. By some means or other, he was impelled to attempt the expression of himself in a literary form; and his success, within certain well-marked limits, has been, as we have said, undoubted. The limits to which we refer, the adverse considerations which seem to us to show that he would be wise to rest content with what he has already done, and really to act upon his own declaration at the close of the poem called "By the Sundown Seas," where he tells us that

> the minstrel's zest
> For fame is broken here, and here he pleads for rest,

are chiefly these. First, it is no detraction from his real merits to say that his genius is somewhat narrow; we feel that its true scope is nature, and the freedom of a purely natural life, regarded in a strong light of imagination, but with a certain simplicity that does not seem capable of much expansion. To use his own words:—

> The passionate sun and the resolute seas,
> These were my masters and only these.

Exactly so; and when these, and the splendid mountains, and forests, and plains, with which their disciple has become familiar, have been sung, the song may be looked upon as finished. For the only basis of further singing would have to be supplied in a knowledge of men and an experience of culture. With culture Mr. Miller owns, here and there rather defiantly, that he has not had any familiarity; and it may be readily observed that his human beings are all of one type, the mere passionate embodiment of those influences of sea and sky and mountain which are his true staple. And, further, we see no evidence in the volume before us that the grave defects in Mr. Miller's style are likely to be re-

* *Songs of the Sunlands.* By Joaquin Miller, Author of "Songs of the Sierras." London: Longmans & Co. 1873.

moved, or even to be materially modified. That he was able to write as well as he has done amidst the peculiar circumstances of his life is surprising; some of the earlier work in the *Arazonian*, and *With Walker in Nicaragua*, was thoroughly remarkable, and occasionally admirable; nor is the present series of poems deficient in worthy parallels to it. But what is excellent in Mr. Miller, in point of style, comes to us damaged with a very large portion of alloy, in the shape either of the falsetto of rant, or the capriccios of an untrained and ungoverned fancy. These, then, are two considerations which, to our own view, seem to make it clear that the poet of the Sierras would be well advised in reposing on the laurels which he has already won; the first being that his genius, though powerful and distinct, is confined within narrow boundaries; and the second, that his style, which is overlaid with many vicious characteristics, does not show signs of growth and improvement, nor can it very well be expected to do so. There is still a third point for remark, which presents to us an additional reason for desiring that Mr. Miller's muse may not be too prolific; and on that we will offer a few comments before we conclude.

It is always fortunate when a series of poems happens to present what are called salient features; and this is the case here. The opening poem, "By the Sundown Seas," a long rhapsodical tale called "Isles of the Amazons," and a collection of short pieces called "Olive Leaves"—these are of the essence of the volume, and to examine them is to examine it. "By the Sundown Seas" is written in the Spenserian stanza; it is closely moulded on the style of *Childe Harold*, the author clearly keeping his great hero Byron perpetually in mind; and it consists of three parts—the first descriptive of the coast scenery in Western North America; the second, commemorative of the early disastrous exploring expedition in search of California; and the third, a reminiscence of Mr. Miller's sojourn in England. These, that is to say, are the bare threads on which he has hung some of the best writing in the volume, and writing (we are bound to say) of very conspicuous merit indeed, taken as a whole. The author cannot speak of his familiar haunts without an energy of passion which it is no small achievement to have curbed even so far as he has been able to curb it. "See Naples and die" is transmuted by Mr. Miller into

> See once Columbia's scenes, then roam no more.

And it must be admitted that he strongly stimulates the desire to see them. His pictures of mountain and cloud are often excellent:—

> Here lifts the land of clouds! The mantle forms,
> Made white with everlasting snow, look down
> Through mists of many cañons, and the storms
> That stretch from Autumn time until they drown
> The yellow hem of Spring. The cedars frown,
> Dark-brow'd, through banner'd clouds that stretch and stream
> Above the sea from snowy mountain crown.
> The heavens roll, and all things drift or seem
> To drift about and drive like some majestic dream.

A second passage has equal force:—

> Lo! the clouds came driving in with morn
> Toward the sea, as fleeing from the day.
> The valleys fill'd with curly clouds. They lay
> Below, a levell'd sea that reach'd and roll'd
> And broke like breakers of a stormy bay
> Against the grassy shingle fold on fold,
> So like a splendid ocean, snowy white and cold.

And the following brief but strong touches, on one of the lofty ranges of Western mountains, are a good specimen of the poet's descriptive manner at its best:—

> The mounts make fellowship and dwell at home
> In snowy brotherhood beneath their purpled dome.
>
> The flight
> Of time is underneath their untopp'd towers.
> They seem to push aside the moon at night,
> To jostle and to loose the stars. The flowers
> Of heaven fall about their brows in shining showers.

The reminiscences of London and of England are disfigured by some crudities, but they possess merits which induce the wish that their author had bestowed more pains upon them, and made altogether more of them:—

> The Abbey broods beside the turbid Thames;
> Her mother heart is fill'd with memories;
> * * * * * *
> And stain'd in storms of grander days all things appear.

This is so well said that we think, had Mr. Miller spent the time and taken the trouble to become really well informed on what he was writing about, he might have commemorated the Abbey in a poem which would have been a worthier and more durable composition than any which he has yet produced. Hucknall Church, where Byron is buried, was a natural object of pilgrimage to his Transatlantic follower; and the few lines which follow are as good as anything that Westminster drew from their writer:—

> Lo! dust indeed to dust. The mould is set
> Above thee and the ancient walls are wet,
> And drip all day in dank and silent gloom,
> As if the cold grey stones could not forget
> Thy great estate shrunk to this sombre room,
> But learn to weep perpetual tears above thy tomb.

A composition called "From Sea to Sea" intervenes between this opening poem and "Isles of the Amazons." It purports to convey in words something of the impression created by a journey on the Pacific Railway, but it is sadly screechy, and bears about the same relation to poetical art that a railroad whistle does to music.

The "Isles of the Amazons" tells a wild and purely mythical story of a young Castilian knight, who in the early days of the Spanish conquest grew weary of bloodshed, and after a series of terrible conflicts and hairbreadth escapes managed to reach the isles of the Incas, and to join a splendid *corps d'armée* of genuine man-hating Amazons. He is fair and slim enough to be taken by them and tended as a woman, and then, *mutatis mutandis*, things move forward to a conclusion resembling the close of the *Princess*, as the knight marries the Amazon Queen, and a host of invaders arrive in time to induce the Queen's female warriors to follow her example, and to fuse with themselves into one nation. The whole poem is written in a melodious anapæstic measure, of which these lines from the Castilian knight's song of farewell to his old life are a good example:—

> And the years may come and the years may go,
> And men make war, may slay and be slain,
> But I not care, for I never shall know
> Of man, or of aught that is man's again.
>
> The waves may battle, the winds may blow,
> The mellow rich moons may ripen and fall,
> The seasons of gold they may gather or go,
> The mono may chatter, the parroquet call,
>
> And who shall take heed, take note, or shall know
> If Fates befriend, or if ill befall. . . .

And the Amazonian warriors, with their manners and customs, are treated with a delicacy of taste that might not be unworthy the attention of certain Cis-Atlantic writers. Still there is a monotony about every canto, a suggestion that the tale is nothing and the descriptions everything, which ought to make the author pause before he resolves to produce much more on the same model. The magnificent "scenes of Columbia" may be thought to deserve what is called luscious description, but the poet of the tropics should recollect that of luscious description there may soon come satiety.

The set of short pieces called "Olive Leaves" is taken up with the treatment of sacred subjects, chiefly from the New Testament. It is here that the limitations of Mr. Miller's genius, and his grave deficiencies of judgment, come into prominent view. He has a lyric on the "Woman Taken in Adultery"; and, though we are unwilling to drag forward blemishes where one would rather be on the look-out for subjects of commendation, yet we must not pass over this kind of raving without some remark. It is a well-recognized fact that the writing on the ground, mentioned in the Evangelist's narrative, may have been no more than a symbolical act; whether or not, that is to say, any words were actually written, must be left in uncertainty. But the writer of "Olive Leaves" decides that words were written, and that all the works of Homer and Milton would be a small price to pay for the inscription. We will confine our quotation to the following singular lines:—

> O better the Scian uncherish'd
> Had died ere a note or device
> Of battle was fashion'd, than perish'd
> This only line written by Christ.

The rhyme in the second and fourth lines is one which we will abstain from characterizing, and "Scian"—which occurs once again in the volume—is a completely original various reading for "Chian." But these slips are as nothing beside the general tone and inspiration of rant underlying the whole composition. It is the same with another lyric, in which the author speculates on what sort of "hymn" was sung by the Apostles on the eve of the Passion; the same again with some verses on the presentation of the Infants. We should have thought that Mr. Miller had enough strength of understanding, if not enough literary instinct, to see that the more sacred a narrative has been held by a long consent of humanity, the more easily it may have a maudlin turn given to it; and that to treat sentimentally what was never meant to rest on a basis of sentiment at all is less a desecration of records which cannot be reached by such strange handling than a plunging of oneself into a hopeless bathos.

We have reserved for the last a further consideration, besides those already mentioned, on the strength of which we venture to hope that Mr. Miller may abstain from writing further, at any rate for some while to come. This may be stated in very few words. At different periods of our literature groups of poets have arisen to whom, from some common characteristic, it has been possible with more or less accuracy to give some common name. We have thus had the "Metaphysical Poets," the "Correct Poets," the "Poets of the Reason," and so forth. Just at present we incline to think that several names might be placed together in a group to which the title of "Egotistical Poets" might not unfairly be given. The writers of whom we speak appear to be for ever concerned about their own poetry, and their reputation and claims as poets; and the sense of this sort of egotism becomes tedious and wearisome to readers who are not unversed in more vigorous composition and in healthier epochs. To this school, though probably with a better excuse than other members of it, Mr. Joaquin Miller belongs. And for this and other reasons we urge him now to wait; he has had ample recognition given to the powers which he really possesses; he should now abide a fuller experience and a maturer stage of culture.

PICTON'S MEMORIALS OF LIVERPOOL.*

IS the well-known collocation of men's cities and men's way of thinking in the third line of the Odyssey, after all, only a tautology? Might the Homeric Greeks in general, instead of putting their famous string of questions to strangers, "Who are you? where do you come from?" &c., have condensed them into the single query, "Which is your native city"? In other words, is there such an individuality about towns, modern as well as ancient, as to warrant our dividing our fellow-creatures, not only according to the laws of craniology or the distinctions of religious denominations, but also as cockneys, Liverpudlians, Manchester men in the strict sense of the term, and Boltonites according to the only generally intelligible application of the word? Such a problem can hardly fail to suggest itself after a perusal, however unconscientious, of the thirteen hundred pages in which Mr. Picton has detailed the *memorabilia* of an all but endless series of δικαιώματα (which etymology of Dickey Sam, "the local appellation for one born within the sound of the parish bells" of Liverpool, though rejected by our author, strikes us as too bad to be lost), all of whom, with few exceptions, bear an odd family likeness to one another. These exceptions, it is true, are the one or two men of genius whom Liverpool has produced; but even a *rara avis* like the late Mr. Roscoe, and a phœnix pure and simple like Mr. Gladstone, have in their plumage some feathers of the local hue; and to have been born and bred on the Mersey is apparently a possession, as it is a joy, for ever.

Mr. Picton's substantial volumes have, as he very modestly avows in his preface, not been compiled in the expectation of attracting a large circle of readers. He is aware that "provincial history and topography"—why does he use the absurd and degrading adjective, absurd and degrading, *i.e.* when applied in an improper sense?—have few charms for the general reader; and he pleads guilty to having, as was inevitable from the plan of his work, introduced a large number of trivialities into his pages. At the same time he fairly urges that the history of Liverpool possesses a typical as well as a general interest; and he might have added that it depends only on the manner of treatment whether the history of any town which is not merely of yesterday can be rendered instructive as well as entertaining. No apology whatever was needed for his design; and the way in which he has executed it is such as to entitle him to the gratitude of all to whom the streets of Liverpool speak of the past as well as of the present. We, however, as treating his work from a more general point of view, may be excused from following him into the details which he has accumulated with so indefatigable a zeal. The day may come when the histories of our principal English cities will be placed side by side with the same systematic care as that which the Munich Commission is now expending on the cities of Germany; in that day Mr. Picton's volumes will furnish valuable materials for a trained historian, who will have little difficulty in excluding the delectable rubbish which Mr. Picton has quite judiciously included in his pages. For his aim was not scientific, and the general bearings of the history of Liverpool upon the national history at large he has only discussed incidentally. His object has been to array annalistically the materials for a history of the commercial growth and social progress of the second mercantile town in England, and then (without fear of occasionally repeating himself) to act as a faithful guide through its streets and suburbs, making every house or site which has a tale to tell tell it with all the circumstance of genial communicativeness. And, wisely judging that a history of Liverpool unaccompanied by a special narrative of the origin and growth of the Dock Estate would resemble a history of Athens without an account of the Laurian mines, he has added to his first volume a sketch of the history of the famous six miles which so "astonished and astounded" the great orator with a quotation from whom this satisfactory summary is appropriately concluded.

From an author whose aims are at once so modest and so comprehensive it would perhaps be unfair to demand those graces of style which are, not indeed irreconcilable with, but not specially necessary in, a work of this description. We therefore cheerfully turn the first page, in which we were at first sight alarmed by three stale quotations in a single paragraph, and acknowledge that Mr. Picton has, as a rule, contrived to be decorous without being dull, and to avoid that breathless flippancy which "metropolitan" are wont to share with "provincial" topographers. He tells a good story, when he has to tell it, without spoiling it; and, after he has exhausted his stock of familiar quotations, generally abstains from wearying the reader's patience by recurring to them.

We wonder whether many of Mr. Picton's local readers will turn with special interest to the earlier pages of his first volume. Yet it is here that some of the most curious information contained in his book will be found. The commercial progress of Liverpool in the days of her prosperity is a familiar tale; the opening of the railway from Liverpool to Manchester, together with the disastrous incident which accompanied it, has been narrated a thousand times over; the humours of contested elections, on which Mr. Picton dwells with peculiar fondness, are after all capable of pulling upon the purified conscience of our own day; and Mr. Gladstone's speech at the opening of the Liverpool College, if it deserves to be remembered, deserves this fate less emphatically than his recent speech in the same walls deserves to be forgotten. But, as in the life of a great man whose latter days have been uniformly prosperous, the mind is apt to dwell with peculiar interest upon the brief records of his early struggles and difficulties, so, in the history of a great town like Liverpool, which, for good and for evil, has during recent generations played so important a part in the development of our national life, we turn with something more than curiosity to the long and weary years when it was, so to speak, striving for bare existence. To follow the course of the history of such a town from its beginnings to its turning-point is to us at least as interesting as to watch the wonderful rapidity of its progress, when that progress had once become an established certainty.

Whatever the origin may be of the "primæval relics" of Liverpool, and whether or not the "Calder stones" are a structure originally erected by what, for want of a better name, Mr. Picton is pleased to call a "Turanian" race, the history of the port, which is the history of the town, of Liverpool, may be said to have begun with the formation of the harbour itself. As the Roman geographers make no mention of that estuary, it is assumed with much probability that, in the Roman times, "the broad sheet of water from the Sloyne up to Runcorn was" still "a freshwater lake, the overflow of which found its way to the sea by a comparatively small outlet through low marshy lands, and that either by the subsidence of the coast line, or from some other natural cause, the sea broke in and formed the present narrow portion of the estuary. If this were so, as there would be no harbour, the insignificant stream might well be overlooked by the Roman geographers." The incursion of the sea which determined the future of Liverpool may thus very likely have been about contemporaneous with the cessation of the Roman dominion over Britain and the period of the English Conquest. In any case, the earliest mention of the river Mersey itself falls as late as the reign of Æthelred the Unready, though there are traces in the names of *Low* and Brown*low* hills of settlements belonging to a much earlier, *i.e.* pagan, date. But the real founder of the borough and port of Liverpool was King John, who, after confirming his father's grant of Liverpool and other lands to Henry Fitzwarine before his own accession to the throne, after his accession exchanged Liverpool, and himself entered into possession of it, at the same time causing the first so-called "charter" constituting the borough to be executed (1207). Mr. Picton facetiously expresses his esteem for King John's unhappy memory by a reference to Burns's "Address to the Deil"; but he also more appropriately points out the probable reason why John's attention was directed to the port, which had become a necessity for the North-West of England after the partial conquest of Ireland. We may take the opportunity of pointing out that when another admirer of King John, Bishop Bale, was in his play of *Kyng Johan* racking his loyal brain to discover all that could be discovered in favour of his hero, yet could find little to say except that

> In hys dayes the brydge the cytizens did contryve,
> Though he be now dead, hys noble actes are alyve,
> Hys zele is declared as towchynge Christes religyon,
> In that he exyled the Jews out of this region—

he would probably have welcomed even so small a mercy as the fact of King John's foundation of the borough of Liverpool, had Liverpool in the early Tudor period already emerged from its obscurity. For its progress, though it began prosperously, was anything but rapid. Under Henry III. the borough was incorporated, and received a charter proper, granting to its burgesses a mercatorial guild with a *hanse* and other liberties; and this appears to be the time of the origin of its so-called "common" seal (the original of which was lost in 1644), bearing the inscription "*Sigill. communæ Borgesid*" (*i.e. communæ Borgensium de*) *Liverpool*, and the figure of a "liver," or cormorant, which we learn was intended to represent "the symbolic eagle of St. John the Evangelist, to whom the inscription on the seal, *Johis*, a contraction for Johannis, referred." On the etymology of "Lever," or "Liver," we can give no opinion. Baines, we observe, rejects "the fanciful derivation from the heraldic bird," and seems to incline to lide pol, or the gentle lake, whence the more ancient orthography Litherpool; but it is cheering to know that there are forty variations of the spelling of the name.

The privileges of the Royal charters were freely violated under the Plantagenets by Edmund Earl of Lancaster and his successors, who treated the freedom of the borough with lordly contempt, and levied the tolls on their own behalf; but Liverpool was of sufficient importance to be represented in that Parliament of Edward I. from which, as is well known, the continuity of our present Parliamentary system properly dates. Its population was then probably under a thousand, and it was still a quite insignificant port. The Scottish wars of the next reigns interfered with its progress; yet its traders were forced to contribute both money and ships for the needs of Edward III. Nor was its prosperity advanced in the reign of Henry IV. (when we meet with the first mention of a connexion between the Stanley family and Liverpool), or in those of his successors; and, partaking in the general decay of national progress during the Wars of the Roses, it seems even to have suffered a diminution of population. The accession of Henry VII. brought to Liverpool, which he of course appropriated together with the rest of the possessions of the Duchy of Lancaster, little but a characteristic, though in this case futile, attempt at royal extortion; and the economical changes of the reign of his successor could not but, so far as they affected Liverpool at all, affect it disastrously. Thus in 1544 Liverpool is included in the list of decayed towns set forth in an Act of

* *Memorials of Liverpool, Historical and Topographical, including a History of the Dock Estate.* By J. A. Picton, F.S.A. 2 vols. London: Longmans & Co. 1873.

Parliament, and Leland, whose *Itinerary* was composed about the same time, describes it very briefly, though not altogether hopelessly, thus:—

> Lyrpole, alias Lyverpoole, a pavid Towne, hath but a chapel, Walton a iil miles off, not far from the Se is a Paroche church. The King hath a Castelet there, and the Erle of Darbe a Stone Howse there. Irisch Marchauntes cum much thither, as to a good Haven.

"In the margin he remarks:—'At Lyrpole is a smaule costome-payid that causeth marchantes to resorte.' Again:—'Good Marchandis at Lyrpole, moch Irisch yarn that Manchester men do by ther.'" The latter part of Henry VIII.'s time is also noteworthy in the annals of Liverpool as having first placed in the hands of the Molyneux family, whose time-honoured connexion with the town is all but cooval with its existence, the lease of the Crown rights, and as having restored to the borough the right of sending representatives to Parliament, which had been suspended for more than two centuries.

The evil days of Edward VI. and of his successor dragged on; the plague decimated—perhaps more than decimated—the thin population of the decaying, but still promising, town; and, finally, in 1561, a hurricane destroyed the breakwater of the old haven. But, at the very lowest of their fortunes, the burgesses gave proof of the spirit which must be native to the place. Mr. Mayor (his name was Robert Corbett) called together the whole town, to resolve on the construction of a new haven; "of his own free will gave a pistole of gold towards the beginning, which that day was good and current all England through for 5*s.* 10*d.*, although after, in a few days, it was not so; but by proclamation in London, by the Queen's Majesty, was prohibited and not current. Also, the same day, Mr. Sekerston did give, also the rest of the congregation did give, so that in the whole was gathered that present day the whole sum of 13*s.* 9*d.* current," with which sum the work was begun by these brave men; and we will gladly on this occasion absolve Mr. Picton for enthusiastically quoting a passage from the prophet Nehemiah as a parallel. Corbett and Sekerston (whose adroit management of the Earl of Derby as the proper person to nominate a burgess in Parliament we must pass by) are justly remembered for their services to their native town; and the latter boldly brought its grievances before Queen Elizabeth herself, praying her to "relieve us like a mother." His saying, "Save me and mine, and the good town of Liverpool and theirs, and then let the nobles kill whom they please," may not savour of a very advanced species of patriotism; but patriotism, like charity, begins at home, and the spirit of Sekerston's prayer is that which has made small towns great, and great towns powerful, in other ages and countries as well as his own. From this period the trade of Liverpool (which now boasted seven streets) went steadily, though still at first slowly, forward. Forms of government have little influence on prosperity at such a stage of development; and the establishment in Elizabeth's reign of a Common Council, which was to fill up its own vacancies, as well as the gradual supersession of the burgage tenants by the freemen as common burgesses, acquired no vital significance for the history of the town till a much later date. It may be mentioned that from 1588 to 1592 Liverpool was represented in the House of Commons by Bacon, a fact which, according to Mr. Picton, is noted by none of Bacon's biographers.

It is unnecessary to follow the fortunes of the town through the Civil War, which are exceptionally well known. Mr. Picton says that the trenches cut in the rock by Prince Rupert during his siege of Liverpool, after it had been taken by the Parliamentary forces, are still visible in Lime Street. Finally, the place was recovered by the Parliament, and, in spite of much suffering from war and plague, survived through these, as through previous troubles, for the advent of a brighter day. With the Restoration at last begins a visible increase of trade and prosperity. After the Plague and the Great Fire of London it appears that "several ingenious men settled in Liverpool, which originated the trade of the port to the plantations and other places. This so enlarged the trade of the port that, from scarcely paying the salaries of the officers of customs, Liverpool before the close of the century possessed the third part of the trade of the country, and paid the King upwards of 50,000*l.* a year in customs." This statement, extracted from the case laid before Parliament in 1699, on the application for an Act to constitute Liverpool a separate parish, Mr. Picton characterizes as "no doubt exaggerated"; but it shows how the tide had at last set in. It was the beginning of the West India trade, supported by a considerable influx of capital from London, which laid the foundation of Liverpool's commercial prosperity. By the end of the seventeenth century Liverpool numbered over five thousand inhabitants; and the number of vessels in the year 1699 was 102, with a tonnage of 8,619.

We must at this point break off our survey, which we intended to restrict to the less familiar part of the history of Liverpool. The various trades (one of them we need not particularize) in which Liverpool successively and simultaneously engaged, and the gradual extension of her shipping and of the appliances to meet its necessities, are all discussed by Mr. Picton; but, except in the history of the Dock Estate, the annalistic method which he has from the nature of his plan pursued makes the bulk of his work more suitable for reference than for consecutive reading. This method at the same time leads him to enumerate events great and small with the same degree of conscientiousness, and to give as much space to the starting of the first stage-coach out of Liverpool as to the completion of the Bridgwater Canal, which latter event, in point of fact, may be said to open the second epoch in the history of Liverpool's commercial prosperity. But, as we have said, Mr. Picton does not profess to be a scientific historian.

Leaving then all these facts, important and unimportant, omitting also all notice of the tremendous Parliamentary contests of the good old times, when Brougham might make immortal speeches though General Gascoyne was sure to be returned, but when Canning's name also shed lustre on the Parliamentary annals, not otherwise of high national interest, of Liverpool—we may, in conclusion, advert to one pleasant and encouraging fact to be gathered from the records of this great commercial town. Liverpool may, as Mr. Picton is not unwilling to admit, "love a lord"; but when it has once become conscious of owning a genius, it is as true to its veneration for him as to its native devotion to a Molyneux or a Stanley. To minds innocent of cotton, there is no name which connects itself so inseparably with Liverpool as that of William Roscoe; and it is pleasant to find this name pervading both the volumes of Mr. Picton's loyal records. Roscoe's politics, like his poetry, may belong to a past age; and in the progress of historical study and historical criticism even the work upon which his lasting fame is based may fail to satisfy in many respects the severer tests applied by a better trained and more sternly inclined generation of students. But, after this has been admitted, it must remain incontestable that not only is his career an instance of self-help of a more elevated description than that which enables a man to die a millionaire and leave half a dozen munificent bequests to half a dozen exemplary institutions, but that it furnishes signal proof of the power of genius to control circumstances, instead of being controlled by them. It would not be incorrect to describe Roscoe as the refuge of art and literature in what was, comparatively speaking, a wilderness of counting-houses; but he did what is infinitely more than encourage by kindness—he stimulated by example; and if there is nothing more pleasing in the recent progress of Lancashire than the evidence of its becoming alive to other demands than those of mere material advancement, no small share of the influence which has contributed to that result is due to the career of one whom every true son of Liverpool will long continue to remember among her foremost worthies. Roscoe once spoke, in reference to his own exertions, of the "perversity of disposition which delights to be employed in anything but what it ought to be." If his native county would at times similarly forget itself, life in it, at the risk of being a little more varied, would lose nothing of its activity, and would gain something in its influence upon the current of national progress.

BY AND BY.*

IF the late Lord Lytton could have foreseen the number of imitators which his unfortunate squib, the *Coming Race*, has produced, it is possible that he might never have given it to the public. It was a novelty in its way, and it was marked, or rather the earlier chapters were marked, by originality and ability of a certain order. People read the book and talked about it. A mild form of literature dealing with an imaginary future seemed acceptable, and the inventive genius of writers like the authors of *Erewhon* and *Colymbia* was stimulated to make capital out of this newly developed taste. Nor is the vein yet exhausted. There is a lower deep even in prophetic literature; and until Mr. Edward Maitland produces another work of fiction of the same character, that place of honour must be assigned to *By and By*. It is difficult to reproduce the past effectively, and even an attempt to do so requires some reading and some historical knowledge. The present is cramped and fettered by the unwisdom of antiquity, and any treatment of it is exposed to the rude assaults of a commonplace and unappreciative criticism. A great soul like that of Mr. Edward Maitland is weary of the stale treatment of everyday life with its dogmas and conventionalities, and little feminine decorums. His spirit pants for the boundless prairies of an illimitable future, where human nature goes about without even a moral figleaf to cover its nakedness. In the vastness of the future the spirit may "evolve." It may dream dreams wilder than any that are dreamed in Hanwell. It may rid itself of all conventionality, and reconstitute society according to its own divine dogmas. The part is an easy one to play now that Lord Lytton has suggested it. You have only to go far enough into the future, and treat of it with adequate incoherence, and the greater nonsense you write the more successful your book is likely to be.

Mr. Maitland has followed Lord Lytton's lead in this spirit. In justice, however, to the *Coming Race*, we must say that his book can hardly be called an imitation. The general framework was probably suggested by it, but the treatment of what for courtesy we may call the design of the book is entirely the author's own. He has the courage of such convictions as he has the capacity to form, and it would be unfair to him, and cruel to Lord Lytton's memory, to offer any suggestion which might seem to deprive Mr. Maitland of any credit he may derive therefrom. The life represented in the book is supposed to be that of many centuries hence, and the scenes in which this future life is portrayed are carried on mostly in the air. The hero is called "Christmas Carol," Christmas being—we were going to say his Christian name, but Mr. Maitland would repudiate such an interpretation as savouring of dogma—his first name,

---

* *By and By.* An Historical Romance of the Future. By Edward Maitland, Author of "The Pilgrim and the Shrine," "Higher Law," &c. 3 vols. London: Bentley & Son. 1873.

and Carol his surname. There is no particular reason, unless it be for euphony, why the order of the names should not be reversed, or indeed why he should have had any name at all, considering the exceptional circumstances of his birth and upbringing. But the author has called him Christmas Carol, "and never," it appears, "did name and nature more closely correspond." He was born in a balloon upon an iceberg near the North Pole; he lived his life in a balloon; he loved the poetry of balloons, of which the following is a stave:—

Balloon! Balloon! Balloon!
Go up and hunt the sky;
Then come and tell us soon
What you have found on high.
* * *
Balloon! Balloon! Balloon!
Tell us of what the stars are made,
What are their children like?
We're always told they're good as gold,
And never sulk or strike.
But arn't they often giddy found,
With always rolling round and round?

He was brought up with a childlike faith in the "Holy Trinity of the Excellencies," Goodness, Beauty, and Use, impersonated by three guardians, "each of whom was an exponent of a different yet co-ordinate factor in the sum of triune perfection."

He married two wives. The first was "reared in tropical Africa, and possessed a temperament so ardent and impulsive that she found it impossible to tone herself down to civilization point." She was also (we are quoting the style of the future, and cannot be held responsible for it) "regarded as the most perfect specimen of simple womanhood for the potency of her instinct of monopoly, and the absolute concentration of all the faculties of her being in the main function of her sex." By this wife our hero had a daughter who was "the due resultant of the compounded natures of her parents"—a person of "a rich and roomy nature, who required all the larger brain she had derived from her father to balance the mighty impulses of her heart." The second Mrs. Christmas Carol was of a different type. "She had the aspect of one from whose veins all the blood has been drawn, and whose vitality is nourished only by a cold colourless lymph." She was "an ingrained liar" (we are again quoting the language of the future), who had the perversity, in her husband's eyes, to be faithful to him, and uncharitable towards people of ambiguous character:—

"Hear me," he said sternly, "and lay to heart what I say. It is no matter for boasting to have the physical characteristic you call purity, when every thought and word is an outrage against every virtue of the soul. Infinitely better is the ardour of the fire than the chastity of the iceberg, for with warmth there is a possibility of life; whereas, of the disposition you evince, there can come nought but utter death. My whole moral nature rises in revolt against the insincerity and hardness you seem to delight in exhibiting. Unless you amend, we must dwell apart."

"Every nerve," we are told, "in Mr. Carol's moral nature quivered with indignation" as he administered this well-merited rebuke to his "lymph-nourished" partner. Between these opposite types of the matrimonial temperament the hero of the romance had a hard time of it when he was out of his balloon. It is not therefore surprising that he spent most of his spare time in it, and that at the end of the third volume he died, as a gentleman should, in his own balloon:—

Born in a balloon, I verily believe [says the narrator of this incident] that by his own choice, through the action of some divine instinct, he is also buried in a balloon. Buried, as Bertie will says, not to moulder in damp dark earth, but far above the corroding influences of our lower atmosphere; far above the lightning ranges; far above the breezes such as we know them; even in those blue depths of air whence he was wont in life to seek his inspirations. Let us rather envy him his euthanasia.

These incidents seem but slender threads on which to weave so great a web as *By and By*. And it may be that they hardly give an adequate impression of the full-blown splendour of the book. Though the modest title-page describes the work simply as "an Historical Romance of the Future," it contains, like the Scotchman's sheep's-head, "a dale of fine confused feeding in t'ill't." To the uninstructed, indeed, it is only a grotesque conglomeration of foolish and impure imaginings, but to the disciples whom Mr. Maitland has called around him, the "Romance of the Future" is another name for a Divine Revelation. Two chapters of this new Evangel have already, it appears, been given to the public. But nobody seems to have been aware that they were a revelation at all. In this the third chapter now presented to us, the author has taken pity on poor humanity, and expounded their hidden purpose in the following words:—

In the *Pilgrim and the Shrine* was represented a youth escaping from the trammels of traditional belief, and laying himself wholly open to the influences of the living Universe, so as to allow his entire system of religious faith to evolve itself freely from the contact of external nature with his own soul.

In *Higher Law* a similar method was applied to Morals.

Having endeavoured in these two books to exhibit the evolution of Religion and Morals out of the contact of the world with the human consciousness, the author cherishes the hope of being able some day to complete the series by a third.

It is hard upon a man to have to explain his jokes; but to call upon a prophet to translate into popular language the inner meaning of a revelation many years after even his disciples had forgotten all about it, is almost unprecedented in the history of creeds. But the worst of it is that the riddle is still unsolved. "What the general intention of the series now completed may be," Mr. Maitland says, "as well, of course, as how far that intention finds its fulfilment in *By and By*, the reader is left to determine for himself." If any reader thinks it worth his while to determine anything about either this chapter of the series or any other, he had better get the book and try. We have wasted some time upon it, far more than such a worthless book deserves, and we have failed to form any idea whatever as to the general intention of all or any of the lot. They seem to us to contain little else than some shreds and patches of crude philosophies picked up at public lectures and places where smatterings of great subjects are easily acquired, and a great deal of unpleasant folly about the relations of the sexes. We cannot, therefore, offer any assistance in the solution of this grand enigma. But, in default, we can direct attention to some of the more striking characteristics of the future as they are pictured in *By and By*.

The great feature is the effect upon posterity of what the author calls the "Victorian Emancipation," "a movement which constituted the crown and completion of the Reformation." Before this great moral event the world, like the Wiffle-waffle of the Desert with its beak in the sand, was sitting on an "inverted pyramid." Three causes were supreme in turning the Pyramid upside down, or downside up, and so putting it all right again. These were, Mr. Edward Maitland, "the Maids' Revolt," or the "woman's movement," and what, with a keen appreciation of the humour of the future, Mr. Maitland calls "the *drat*atory clauses of the Athanasian Creed." The face of the world was changed when Mr. Maitland proclaimed the Emancipation. All dogmas, and especially the "dogma of marriage," were abolished, and men and women—more particularly women—lived and moved and had their being in a moral (or an immoral) state of nature. The religion of the Emancipation was the worship of the "Holy Trinity of the Excellencies"; and "the essence of the Emancipation was to follow our individual temperaments," as is beautifully illustrated by the following description of the character of Susanna Avenil, daughter of one of "the exponents of a different yet co-ordinate factor in the sum of triune perfection":—

Inheriting the strongly marked independence of character belonging to her race, Susanna Avenil was one of those women who valued liberty above love, and placed her own individuality and work before her affections. She felt that as a woman she had a right to complete herself, and she regarded no human being as complete until he or she had become a parent. In her own case, it was a duty owed to the race, as well as to herself; a duty from which, had she been weakly in body or brain, she would have considered herself exempt; or, rather, her duty would have lain the other way. The lowest types and worst specimens of humanity, she argued, are sure to breed; so that if the best abstain, the world will soon be given up to the worst, and the struggle for existence will end in the survival of the least fit.

* * * * * *

It was without a particle of vanity that she regarded her own noble development of constitution and form. She had inherited them, and it was no merit of hers to have them. But the inheritance brought a duty with it. Having inherited, she must transmit them. It was only by repaying to posterity the debt owed to her ancestry, that she would deserve well of her kind.

The old-fashioned domestic life had no charm for her. She deemed it fatal to independence and individuality; and scorned, as an oriental extravagance, the notion that it is a woman's chief end to minister to the comfort of a man. She scorned also the man who wanted such comfort. People had said that although so fine a creature, she was of a hard nature. But a time came when she appeared to them to soften. She had experienced a grief, a mortification, and for some time held her head less high than had been her wont. Had she been crossed in love? No; the man with whom she had entered into matrimonial partnership had exhibited no symptom of indifference to her. He was a noble fellow, but she had failed to become a mother, and the failure was to her a bitter sorrow. She feared that, after all, she was not to be a complete woman, and at this thought her stately head drooped. The terms of her contract made a severance easy, even had the Legislature not regarded childlessness as a valid plea. Their compact had been one into which but little of sentiment, as commonly understood, entered. Mingling with his feeling of profound respect for her nobility of character, was a regret on the score of the too business-like nature of her disposition. Her temperature could not rise to the level of such love as was likely to prove creative.

At least, such was his theory. As for himself, he soon married again, and then came a new mortification for Susanna. It did not consist in that which ordinarily constitutes a humiliation for women. She knew not how to be jealous. But in his new association her late husband became a father.

At length she gathered courage to try again. This time, to her joy and pride, she had the success for which she pined.

After this illustration of what our descendants are destined to achieve, it may be unnecessary to mar the effect by any further quotations. There is much to be learned of the future in these pages, and some very choice specimens of both the humour and the poetry of posterity may be found sprinkled about. These may, it is true, disappoint the sanguine, but they are quite as good as either the philosophy or the prose.

The most interesting point connected with the book is, strange to say, to be found in the advertisements attached to the third volume. They are but an illustration of the trite old saying (to which we may presume in Mr. Maitland's presence to borrow from a familiar Book of Dogmas) that a prophet has no honour in his own country. It is in Brooklyn, U.S., and in Chicago that the New Revelation comes like words of glad tidings. "Amidst the barren verbiage, the arid fruitless waste, which constitutes the plane (*sic*) of ordinary fictitious literature, this remarkable book," says the *Chicago Times*, "is a sparkling oasis, where the thoughtful reader can satisfy the demands of both brain and heart. . . . Among the few notable examples in the region of fiction, in which it requires genius at white heat to triumph over all difficulties, are Goethe's *Wilhelm Meister* and the *Elective Affinities;* Richter's *Flower, Fruit, and Thorn* pieces, and *Titan;* Hawthorne's *Marble Faun;* and George Eliot's *Romola*. *Higher Law*" (a former work of Mr. Maitland's, one of the series) "is equal to any of

these in eloquence and depth of insight, and in the art of construction superior to all except the last two." Happy Chicago! we now know the pastures from which the Prophet of the Emancipation leads his silly sheep.

GERMAN LITERATURE.

Of all Oriental countries, Egypt* is undoubtedly that in which the inoculation of European ideas has been most complete, and perhaps it may be further described as the only one whose rulers have embraced these ideas as a matter of genuine preference, and without any suspicion of *arrière-pensée*. The Shah of Persia may possibly regard his European journey as a necessity imposed upon him by the hardness of the times; but the Khedive is unquestionably as alive as any European to the advantages of railways, banks, newspapers, and other appliances of Occidental civilization. The great questions, how far this revolution is being accomplished in an enlightened spirit, and whether it does not merely graze the surface of society, leaving the innermost core unaffected, are discussed in a somewhat desponding spirit by Herr Moritz Lüttke, a German clergyman, recently of Alexandria, whose long residence in Egypt unquestionably gives him a *primâ facie* claim to attention. If we are unable to repose implicit confidence in his observations and deductions, it is not from distrust of his veracity, or from overlooking the optimistic illusions to which those are exposed who seek to estimate the progress of an Oriental country from a European point of view, but from the writer's obvious deficiencies in sympathy, sagacity, and intellectual power. It is apparent that he has merely viewed Egyptian society from the outside, and that he has not been able so to identify himself with its spirit as to judge it from the point of view of the natives themselves. We are told much that must be perfectly obvious to every foreign resident, and with which, by dint of constant repetition, we ourselves had become pretty well acquainted; but, had we only Herr Lüttke for a guide, we should be at a loss to understand how this defective society still manages to subsist, how every kind of public extravagance, corruption, and malversation is still compatible with national prosperity and actual progress. For an answer to the latter class of questions we must resort to the excellent, if somewhat too favourable, work of Herr Stephan; for an answer to the former, so far as the Fellah is concerned, to Lady Duff Gordon; as relates to the Levantines, to Mr. Bayle St. John. These writers, cordial, genial, unshackled by prejudices, and domesticated among the classes of whom they respectively treat, attained a comprehension of their ideas and feelings which must, we fear, be denied in any case to a foreign clergyman, whose profession marks him out as an alien, and who has need of much discretion to escape being regarded as an enemy. Without imputing intolerance to Herr Lüttke, it is still manifest that he has never been able to free himself from the conception of Mohammedanism as something to be put down, and that he can only tell us how it appears to a respectable Lutheran pastor. This is not exactly what we want to know, and the same remark applies in a less degree to his account of the native Christians. In treating of the European element he is more at home, and his volumes contain much useful information with reference to the progress and prospects of schools and missions. The Roman Church, he says, spares no pains to increase her influence in the country. The religious and educational chapters are the most distinguishing features of his volumes. On all questions of administration and statistics he is far inferior to Herr Stephan. It is interesting, however, to learn his opinion of the present Government, which is by no means favourable. Little, he thinks, can be expected from its egotistic innovations, but the superposition of a thin varnish of refinement upon the indigenous barbarism; and he directly accuses it of conniving at the slave trade for the sake of the tax upon the transit of slave merchandise up the Nile. We can easily believe that the Khedive's government is very far from disinterested or truly enlightened, but the consequences which may arise from the disturbance, from whatever motives, of the inveterate stagnation of Egyptian society, require to be estimated by reasoners of a different calibre from Herr Lüttke.

The fallen reputation of Spain is in no way retrieved by the observations of the latest traveller, Professor Geppert†, which indeed seem calculated to bereave that unfortunate country of the last one illusions that still cling to her. It must be considered in fairness, however, that Professor Geppert had more to try his temper than is likely to befall the generality of travellers. He visited the country with a view to literary research, and his adventures on this quest were little but a long series of disappointments. At Madrid he found no edition of a classical author less than a century old; at Toledo he had to inform the librarian of the existence of his own catalogue, of which that functionary himself was profoundly unconscious; at Seville he ascertained the existence of two important Roman inscriptions only to learn that he would not be allowed to copy them until they should have been edited by a gentleman unacquainted with Latin. A still greater disqualification for a cheerful view of Spanish affairs is the Professor's morbid disinclination to be robbed, or even cheated—incidents which the traveller [illegible] as things of course. We can imagine that his tour might have worn a very different aspect to him had he been a younger man, endowed with a keener sense of the beauties of nature and art, negligent of books in a country where nobody reads, and less sensitive on the theme of his abstracted clothes-brush and misappropriated boots. His entire inability to bring himself down to the Spanish level—a great descent from the German level, it must be owned—tinges his narrative with a more pronounced air of querulousness than properly belongs to it; for the expression of his grievances, even when he feels himself most aggrieved, is moderate enough. On political matters he has little to say, but remarks, as others have remarked, that the one institution in the country with any vitality is the army, and that in the last resort everything will depend upon the action of its leading chiefs. The possibility of the total dissolution of this last representative of the principle of authority had evidently not presented itself to him. He sensibly observes that the evils of Spain are principally due to moral and social causes, and is fully impressed with the paramount duty of the Government to remedy before all things that which he has found especially detrimental to himself—the circulation of counterfeit money.

With the exception of an old version of the "Leviathan," the rendering of Hobbes's treatise "De Cive"*, now before us, is the first translation of any of his writings into German. The compliment to our countryman is somewhat impaired by the fact that, with every acknowledgment of his acuteness and his position as a representative of a leading school of philosophic thought, he is still apparently exhibited as an example of what his translator considers a pernicious method in philosophy. The philosophy of ethics, politics, and jurisprudence is not, he says, sufficiently inductive; it pays too little attention to the actual experience of human nature. The *ought*, as he expresses it, is already inherent in the *is*, and should be deduced from it, instead of *vice versâ*. This does not seem so very different from Hobbes's own practical conclusions; but it contradicts the theory on which they are based, of a social contract, which becomes superfluous. This and other points of difference are discussed with much ability in a copious, but not diffuse, commentary, which also furnishes useful explanations of the text. The translation is very perspicuous and readable. The translator is as much of a Conservative in political matters as his author; and his work must be considered as an indirect contribution to the support of the existing order of things in Germany. He carries the same feeling into religion, and bestows on Hobbes a much higher character for orthodoxy than general repute has usually allowed him.

A. Spir's *Thought and Reality*† is a remarkable work, both on account of its acuteness and (the abstruse nature of the subject considered) its lucidity, as well as for the exceptional situation of the author and of the intellectual position assumed by him. He is, we believe, a Russian, and it is probably owing to this circumstance that the English school of empirical philosophy has received a much larger measure of attention at his hands than is usually vouchsafed to it in Germany. At the same time M. Spir is by no means a follower of this school, in so far as its sensationalism is concerned; though he approaches it nearly in maintaining that our cognizance, which can never be a cognition, of the Absolute must be based on the actual observation of facts. A system of metaphysics is consequently impossible, and he devotes much space to a caustic criticism of the contradictions in which metaphysicians have, as he considers, involved themselves. At the same time he is a strong advocate for the actual existence of causality, as distinguished from the mere observation of sequences of phenomena; and in general his conclusions seem to differ little from those which common sense is wont to reach without the aid of a process of philosophical reasoning. Deriving so much from various schools of thought, his vigorous individuality insures him against mere eclecticism, and the character of his work as an independent criticism on our national school of philosophy and its chief antagonists should procure it a considerable degree of attention in England.

The proposals of Herr Fabri‡ for the reorganization of the Protestant Church in Germany, commented upon in an anonymous work showing considerable acquaintance with the subject, appear to contemplate the disendowment of the Church, but at the same time her maintenance in a condition of subservience to the State, without, as it would seem, the offer of any fair equivalent on the part of the latter. Two great practical difficulties beset the project—that of inducing the Lutheran and Reformed Churches to remain united, and that of prevailing upon the laity, who, according to Herr Fabri's theory, ought to come forward and supply the want of direct State control, to give themselves the least concern about the matter. Disestablishment under such circumstances could only increase the influence of the clergy, a result so antagonistic to the genius of Prussian policy that the question will no doubt be allowed to rest for the present.

Herr T. Büdiker* apprehends that an endeavour may be made to introduce the English system of local taxation into Germany. He has accordingly investigated blue-books and similar documents with the view of establishing its inequitableness and cumbrousness, and the disrespect in which it is held within the four seas. The multiplicity of our local authorities, the indefiniteness of their jurisdiction, and the difficulty of putting their ordinances into execution, afford ample material for his disparaging criticisms.

A supplement to Dr. Walcker's Manual of Political Economy† contains much sensible and genial, perhaps too optimistic, criticism, on the leading modern schools of the science. The author's own position is perhaps best described by the epithet which he applies in a spirit of disparagement to Stuart Mill; he is an eclectic, and his eclecticism is chiefly evinced in his anxiety to combine the views of the Manchester school with those of the "academic socialism" which, while respecting the rights of property, invokes the intervention of the State with a view to its equitable distribution. Could the acquisition of land in small parcels be facilitated, we should, he thinks, hear no more of socialism. He entirely concurs with the hostility of the Manchester school to protective duties, while reminding them that they have for the most part abandoned their other cardinal principle of *laissez-faire* by assenting to the control of education by the State. The book also contains a number of interesting remarks on miscellaneous practical matters, especially the practicability of the introduction of an Income-tax into Germany, a measure congenial to each of the schools of thought whose reconciliation the writer is endeavouring to effect.

The strict application of the maxim "Amicus Plato sed magis amica veritas" threatens to deprive Plato of biographers for the future, or to restrict their operations within the narrowest compass. The last of these amicable beings, the late Karl Steinhart‡, a Platonic scholar of established repute, and author of a series of valuable introductions to the several Dialogues in the version of Hieronymus Müller, appears to have felt some doubts whether any adequate materials existed for the accomplishment of his task, and much of his book is directly or indirectly occupied with establishing its right to existence. As must inevitably be the case, it is rather a dissertation on the circumstances of Plato's time than a narrative of his career; but the subject is in itself so interesting that we are not tempted to inquire too curiously into the strict relevances of all Herr Steinhart's details to his professed subject. One of the most useful parts of his book is the introductory conspectus of what has been already effected for Plato's biography, whether in the department of authentic tradition, legendary accretion, or modern criticism. He would have strengthened his case considerably if he could have seen his way to accepting Mr. Grote's views as to the genuineness of the Platonic Epistles, which, however, he rejects with something like contempt, declaring Grote's work a decided retrogression on the path of critical inquiry. We hope it is not an article in the modern critical creed that any ancient writing on whose genuineness suspicion has once been thrown is to be incapable of vindication ever afterwards.

The second volume of Dr. E. Buchholz's§ learned and agreeable work on the Homeric world treats of Homer's acquaintance with the three great natural kingdoms, including the physical constitution of man. Homer is clearly shown to have, like Dante and Shakspeare, known all on these subjects that his age could teach him, and to have probably far surpassed the average standard of its knowledge. It may be added that the general uniformity of natural knowledge displayed throughout the Homeric poems is a strong argument on behalf of their substantial unity of authorship. The question of Homer's feeling for scenery is also discussed, and he is shown to have possessed it as thoroughly as was compatible with the simple objectivity of an age which had not yet learned to associate natural objects with spiritual ideas. The latter part of the volume is devoted to the frequently difficult task of the identification of the animals, plants, and minerals mentioned by Homer.

Dr. von Mauck‖ claims to have solved the problem of the origin of the Etruscans. His solution will afford satisfaction on the Sister Island, if nowhere else. The Etruscans were Irish. We must leave his hypothesis to the judgment of comparative philologists, with the observation that it is not recommended to us by the production of such notoriously borrowed words as the Irish equivalents of *myrtus* and *fabula* in support of it. The existence of a Celtic element in Latin is no new discovery, but we do not see how this helps the case with reference to the Etruscans.

Selinus¶, a Dorian colony in Sicily, was founded about B.C. 628, and flourished until its destruction by the Carthaginians in 409. Its six magnificent temples long survived its destruction, and, protected like those of Pæstum by their seclusion, remain like these to this day comparatively exempt from injuries, except-ing of the weather. They were first accurately examined and delineated by Angell and Harris in 1823; subsequently by Hittorff in his (unfinished) work on the ancient architecture of Sicily (1827); once more in the Duke di Serradifalco's great treatise on Sicilian antiquities (1834). The present Italian Government has caused excavations to be resumed under the superintendence of Signor Cavallari, by whom much has already been effected. The work before us contains excellent tinted lithographs of the extant metopes of three of the temples, with an illustrative text by Otto Benndorf, penned with great elegance and perspicuity, and embodying the latest results of archæological science. The great interest of these remains arises from their chronological succession, presenting within a narrow compass a complete view of the progress of Dorian sculpture from a condition of extreme rudeness to one of almost perfect mastery. Architecture had evidently obtained a high degree of development ere the plastic art had emerged from the most primitive stage. The oldest metope, representing Perseus despatching Medusa, is almost as grotesque as a Mexican carving, and powerfully illustrates the affiliation of Greek to Oriental art. Yet, as Herr Benndorf well observes, with all the rudeness of the design, it is surprising how much is conveyed by it; and, if technically inferior to most Assyrian sculptures, it bears the palpable germ of higher things than Assyrian art was ever able to attain. From this point progress is continually apparent, and the last two metopes, representing the amorous scene in the Iliad between Zeus and Hera, and the catastrophe of Actæon, are wrought in a most poetical style, and are singularly impressive. Herr Benndorf's volume deserves to be most cordially commended to the attention of archæologists.

The question of the development of a taste for the romantic in scenery is investigated in an essay by Professor Friedländer*, who arrives at the usual conclusion that, up to the eighteenth century, pleasurable associations with scenery usually had more reference to its agreeableness or suggestiveness of physical comfort than to its picturesqueness, and that the name chiefly to be connected with the revolution of modern ideas on this point is that of Rousseau. The term "romantic," he says, is of English origin, and was first employed by Addison, but received its present application from Thomson.

Unlike the other posthumous publications of his works, Rückert's poems on the death of his infant children†, written in 1834, fully maintain his reputation. Though occasionally over-minute and with a tendency to triviality, they still display the deep feeling and the simple grace, the copious imagery and fluent melody, of the best of his poems on domestic subjects.

RUSSIA.

KHIVA, it is stated, has fallen, and thus the success of the Russian expedition is assured. The mode in which this difficult undertaking has been carried out reflects the greatest credit on the commanders and troops employed. So severe were the trials to which the men were exposed that one detachment was forced to abandon the enterprise; and the soldiers, worn out with the difficulties against which they had to contend, declined to proceed further, and made the best of their way back to a place of refuge. But the general endurance of the troops, and the skill with which the combinations of the commanders were formed and carried out, were admirable. M. VAMBÉRY, who hates and fears the Russians, behaves like a generous enemy, and bears his ungrudging testimony to the qualities of mind and body which must have been displayed in order to effect in so short a time the union of several detachments, each marching through districts which it seemed scarcely possible to traverse. He describes the region through which the detachment that ultimately turned back attempted to pass as one where a well-seasoned caravan can advance only with inexpressible difficulty and contempt of death, and where he himself, who was never ill in his life, sat for days half senseless on the camels. Nor were the routes taken by the detachments which arrived at their destination full of obstacles much less trying. The vicissitudes of climate which the soldiers of all the detachments had to undergo may be judged by the fact that when the troops moving from Orenburg reached the northern end of the Sea of Aral, they found it a sheet of ice, while they had afterwards to march through sands the surface of which to a depth of four or five fingers' length glows like an oven. The little water that can be found in the steppes is brackish, and it was discovered that some at least of the wells had been poisoned by the Khivans. The difficulty was to get to Khiva, not to take it; for the Khan could not, it is said, get his subjects to fight, and the mercenaries he scraped together were hardly armed at all, and were totally unequal to resisting disciplined troops. The outlying posts on the Oxus were captured after a very slight resistance, and the capture of Khiva appears to have caused the Russians absolutely no difficulty. The Russian success has therefore not only been complete, but it is of a character to impress in the highest degree the barbarous tribes over whom Russia seeks to establish either a sovereignty or a protectorate, as it was precisely because they thought that nature had interposed an insurmountable barrier against a Russian expedition that they were inclined to defy the power of the CZAR. The Russian Government in the course of the negotiations of last autumn compared their expedition against Khiva with the English expedition into Abyssinia, and the points of comparison are numerous and obvious, more especially as we can now add that both were rewarded with a brilliant success. The cause of war was in each case the same—the ill-treatment of captives; the physical difficulties in both cases formed the only real obstacle to be overcome; and in both the nicest calculations were necessary in order to enable the troops to march forward effectively. Lord NAPIER, however, had one great difficulty which did not present itself in the case of Khiva. He had not to avenge captives so much as to get captives out of the clutches of a savage, and it was his skilful diplomacy, quite as much as the military qualities he displayed, that commanded admiration. On the other hand, the Russian troops appear to have had to endure sufferings far beyond anything that the English were called on to undergo in Abyssinia. M. VAMBÉRY goes so far as to say that the task they have accomplished throws quite into the shade the campaigns of HANNIBAL and NAPOLEON. Whether this is so, history will pronounce; although here, as usual, history will have to pronounce without having any very complete materials for coming to a decision. But at any rate the Russians have done something of which they may be most justly proud, and which will no doubt be highly satisfactory to them at a time when the great triumphs of the Germans have seemed to throw other armies, and the Russian army amongst others, into a kind of obscurity.

The Russian Government proposed last autumn that the expeditions to Abyssinia and to Khiva should also resemble each other in another point of importance—namely, that they should both end with the retirement of the conqueror from the scene of conquest. The Russian public, so far as it has or ventures to express an opinion on such a point, appears to have regretted that its Government should have given any such undertaking; and the portion of the Russian press which is thought the most patriotic has been constantly explaining for months past that if the English think that Khiva, when conquered, will be abandoned, they are very much mistaken. If the Russian Government wished to slip out of its engagement, it might perhaps find a loophole for doing so; but it would be incontestably breaking an engagement which it has chosen to make. For reasons of its own, it chose to promise that Khiva should not be permanently occupied, and it cannot be doubted that one of the chief motives from which it acted was the wish to make a difficult task somewhat easier by appeasing any jealousy that England might be inclined to entertain. The Khan of BOKHARA, who is a dependent of Russia, made himself very useful to the expeditionary forces, furnishing them more especially with extra boats for the passage of the Oxus; and it is not at all impossible that, if he had had reason to suppose that England would like to see the Russians fail, he might have been more lukewarm in giving the invaders aid. But we have not to do with the motives of the Russian Government. All we have to consider is that it has chosen to make us a promise, to break which would be an act of bad faith which would not in all probability lead to war, but which would make the relations of the two Powers in the East in the highest degree unpleasant. But we can neither expect Russia to withdraw her troops from Khiva at once—for it is said to be physically impossible that the soldiers should accomplish their journey home so long as the intense heats of summer last—nor can we interfere with the terms which Russia may choose to impose on the barbarians she has conquered; and if she thinks it worth while, she may easily manage to make Khiva practically dependent on her, without subjecting it to the direct rule which a permanent occupation would involve. Nothing can deprive Russia of what is the main part of her success—the conviction she has brought home to the KHAN and his people that she can get at them whenever she likes. Nor will it be necessary hereafter to surmount the difficulties which she has now had to overcome. The experience of the Khirgiz steppes shows that labour and patience can make a route practicable which presents the greatest obstacles when troops have to take it for the first time. Khiva can never be an easy place to get to, but it may be made a much easier place to get to than it now is; and Russia may be expected to insist that, for the sake of trade or under some other pretext, the communication between Khiva and the Russian frontier shall be made much less difficult than it is now. What are the real projects of Russia in Central Asia, no one out of a very limited circle of Russian officials knows, and it may even be doubted whether any Russian has any clearly defined plan. But the conquest of Khiva, and the establishment of ready means of communicating with it, will do so very much to ensure whatever objects Russia may have in Central Asia being gained, that it can scarcely be worth while for Russia to arrange at once for the

permanent occupation of the country in the teeth of the promise which she thought proper to make to England before the expedition was undertaken.

The same portion of the Russian press that has got excited about Khiva has also been moved to anger and scorn by the accounts received of the splendid reception given to the SHAH in England. It is apprehended that so much is being done for him in England that it may tempt him to forget how much was done for him at St. Petersburg. An indignant Russian paper recalls to his treacherous memory, not only how well he was received in Russia, but how dangerous a friend England is, and how much harm we have already done to Persia. It invites him to notice the hidden growls of the perfidious and cruel English tiger amid all the siren strains of English diplomatists and journalists. How can a wise SHAH really like being friends with a tiger or a siren, when there is kind, honest, peaceable Russia always ready to support and assist him? England, he should understand, is desperately wicked, having got up the Indian Mutiny of 1857 for its own private ends, and at the same time completely impotent, as its ironclads cannot guard the Indian frontier. To argue with such disputants is mere waste of time, nor would it be easy to explain to him the real meaning and causes of the enormous fuss that has been made here about the SHAH. Perhaps if we could bring a foreigner to understand that in this country twenty thousand people will go miles in densely packed third-class carriages to assist at a Foresters' fête, he might be put in the frame of mind which would make the excitement about the SHAH seem not wholly unnatural. Every one in England has apparently time and money to go to see anything anywhere, and every one likes to see the things or persons most eminent in their own circle made the centre of attraction to strangers. The Scotch are much disappointed that the SHAH has not made a round of the Scotch burghs, and has wilfully avoided an opportunity of seeing Provost after Provost in his full robes. As every one wants to see everything, and to show off something, an illustrious stranger has had a good many sights to get through, and is himself a sight to innumerable thousands. There is, too, no doubt some sort of wish felt even beyond official circles that the SHAH should take home a high notion of English power. No very great result is produced by the impressions which public spectacles convey; but still the SHAH may realize, better than he could otherwise have done, that England, although a long way off from him, is not to be forgotten as a friend or an enemy. The position of Persia as regards Russia and England is very simple. Russia can do Persia much the most harm, and England can do Persia the most good. England wishes him to be independent, and will perhaps lend him some money. As fear or hope preponderates he will turn to the one country or the other, and, so far as he may be guided by personal sympathies rather than by considerations of policy, he will probably retain a sufficiently pleasant recollection of what was done for him in England, greatly as he must have suffered under it at the time, to make him doubt whether a siren-voiced tiger is an accurate description of the nation he has been visiting.

THE CRISIS OF THE JUDICATURE BILL.

WE deeply regret to see that the Government has adopted a course which, if persisted in, is almost certain to prove fatal to the hope of legislation during the present Session on the great subject to which so much effort has been directed. If the important amendments which have been proposed are to be bitterly contested, there is little chance of bringing the debates to a satisfactory, or indeed to any, conclusion; but the statesmanlike breadth of the ATTORNEY-GENERAL's speech had warranted the expectation that the acknowledged defects of the Bill would be frankly remedied, and that all valid objections would be met in a conciliatory spirit. This, however, is not the temper indicated by the amendments of which notice has been given in the name of the ATTORNEY-GENERAL. We do not like to call them the ATTORNEY-GENERAL's amendments, for it is difficult to suppose that the hand which drew them could have been guided by the mind which dictated Sir JOHN COLERIDGE's speech. There is no congruity between the rough hand of ESAU and the silky voice of JACOB.

On all sides it has been admitted that the Court of Chancery has not the numerical strength which its work requires. Common Law men and Equity men are agreed on this point, and if the *Times* may be taken, as we think it may, as a fair exponent of public opinion on the subject, the country is more anxious that the Courts should be made efficient than that a few thousands a year should be saved. Now let us see how this desire is responded to on the part of the Government. The present judicial establishment—so far as Judges of First Instance are concerned—is eighteen Common Law Judges, four Chancery Judges, one Divorce, and one Admiralty Judge, in all twenty-four. The Bill as it now stands proposes to reduce this staff to twenty-two, by making five instead of six the number of each Common Law Court, and by adding a new Equity Judge to compensate for the interruptions which the Appellate duties thrown upon the Master of the Rolls will occasion. These twenty-two Judges would have to do all that is done now by twenty-four Judges, and also all that is done by deputy in the Bankruptcy Court and in the Equity Chambers, and all that is done by a number of official and special examiners who now waste their time in the idle occupation of taking depositions out of Court. More work to be done by fewer Judges was so far the Government programme, and it was not surprising that Mr. FOWLER's proposal to bring the strength of the Equity Courts up to the level of their new duties should have been welcomed as warmly as it has been. It was imagined that the Government would meet Mr. FOWLER with a disposition to discuss fairly the real requirements of the case, and to yield to his proposals so far as he might sustain them. They have taken a diametrically opposite course. Their amendments propose that the strength of the Courts shall be diminished instead of being increased; that is to say, that there shall be only twenty-one Judges of the High Court besides the Lord Chancellor, who will not be a Judge of First Instance. Mr. FOWLER, as the exponent of the really unanimous opinion out of doors, asked for more judicial strength, and the retort is that he and the public shall be punished for their presumption by having that which the Bill provides still further reduced.

The form of the Government amendments indicates the line of argument which they mean to adopt. One additional Judge, said Mr. FOWLER, is wanted to do the Judge's work now delegated to Bankruptcy Registrars. This cannot be and evidently will not be denied; but the Government propose to meet the difficulty by transferring Bankruptcy administration to the Court of Exchequer. It matters very little what Court does the work if there is strength to do it well; but this amendment assumes that the Court of Exchequer, hitherto manned by six Judges, can do its work with four—one being absolutely cut off by the Bill, and one other having his whole time absorbed in Bankruptcy, according to this amendment. If this is really possible, the original Bill must have been very improvidently drawn. But this is not the only difficulty. One principle paraded on the face of the Bill, and dwelt upon in the LORD CHANCELLOR's speeches, was that all administrative business should go to the Chancery Division because it had the requisite administrative organization. Bankruptcy law is incidentally applied both at Common Law and in Equity, but the Appellate tribunals in Bankruptcy administration have always been the Chancellor, the Lords Justices, and a selected Vice-Chancellor, the present Chief Judge having been specially designated for the post by Act of Parliament on account of his exceptional mastery over the subject. But the principle of constituting one great Administrative Division is thrown over without hesitation, in order to save, in appearance only, the necessity for another Judge, by shifting his duties upon a Court to which a full share of duty was already assigned.

Another of the Government amendments shows still more clearly how recklessly the vital principles of the measure can be sacrificed in order to effect a petty saving. It is proposed to restore to the Chancery Division the power which modern legislation has taken away of directing an action at law in aid of Chancery proceedings. It needs a little explanation to convey to the lay mind the full meaning of this retrograde proposal. Years ago it was the practice of the Court of Chancery to decline to decide for itself a variety of questions of law and fact, and to suspend bills before it until the result of an action at Law was ascertained. This was by far the most flagrant form of that "bandying" of the suitor from Court to Court, the prevention of which has been put forward as the crying necessity which called for a sweeping reform. Another form of this "bandying" which has been more talked of, though it is much less real, arises when a suitor having a good case at Law, and at Law only, is foolish enough to file a Bill in Equity, or the converse; but we are within the mark in saying that there have probably not been twenty such cases in the last twenty years. Suitors are generally too well advised to make such blunders, and the cases in which they seem to occur are almost always cases in

which the plaintiff's chances are desperate in either Court, and he chooses what seems the least hazardous of two forlorn hopes. But the delay and cost of "bandying" when the Court of Chancery used to direct actions at Law was a very grave mischief indeed. This has been remedied for years by enactments that in such cases the Court of Chancery shall decide its own cases, and now by an amendment in a Bill, which was specially aimed at abolishing the little remnant of such abuses, the Ministry cynically propose to restore in all its old flagrancy the very mischief which they have so loudly denounced. And why? Simply as an excuse for saying that they will thereby relieve the Court of Chancery of a large measure of its business, and so render it unnecessary to increase or even to keep up its strength.

The amendments, translated into simple language, say just this:—"It is admitted that the Chancery Division, if it is to do "its own work, will need to be strengthened in some such way as "Mr. FOWLER has proposed, but instead of doubling its strength, "we will halve its duties by transferring them to Common Law "Courts, which we have already weakened in the ratio of six "Judges to five. To do this, it is true, will compel us to disregard the principle that the Chancery Division shall be the "Court of Administration, and to aggravate the serious evil "of bandying suitors from Court to Court, which originally "inspired us with so much indignation. But, if we sacrifice "principle, we save money; and, while we throw upon the "Judges of First Instance a largely-increased aggregate of "work, we shall reduce their numbers from twenty-four to "twenty-one, and save the public 15,000*l.* a year. Is not "that a clever bargain, and will not a frugal people applaud "us for what we have done? Carping critics may say that, "if you put upon the Judges more work than men can do, "some of it will be left undone, but we cannot help that. "We shall have done our duty by enacting that it shall be "done, and if the scheme breaks down in practice, that is no "affair of ours."

Some such argument as this is all that can be urged in favour of the amendments, and Parliament will be able to judge whether it is a sound and statesmanlike contention.

SPAIN.

THE homogeneous and unanimous Cortes of Spain have already submitted to the laws of Parliamentary nature by spontaneously distributing themselves into parties. It is not easy at a distance to distinguish between the Right and the Left, nor even to ascertain which denomination includes the present Ministry. Señor PI Y MARGALL, in one of his recent speeches, denounced the Unitarian Republicans as reactionists; but it is not quite certain that any member of the Cortes professes the Unitarian doctrines which would a year or two since have been thought revolutionary. No Cabinet and no majority since the meeting of the Cortes has hitherto lasted for a fortnight. PI Y MARGALL himself, though he has during the interval been almost uninterruptedly Prime Minister, has held his office by three or four different titles, at the head of several successive Cabinets. He was first elected on the nomination of FIGUERAS and CASTELAR; then he returned after a temporary resignation, while all his colleagues were separately chosen. The next change was to give him the power of appointing the other Ministers; and possibly some still more recent combination may have been by this time devised. On one occasion PI Y MARGALL dwelt strongly on the necessity of concentrating all power in the orthodox hands of the Federal Republicans. The other political parties having taken no part in the elections, were not represented in the Cortes; and, as the Minister truly observed, abstention is in Spain almost synonymous with conspiracy. It may undoubtedly be assumed that all the Monarchists, the Progressists, and even those who were lately moderate Republicans, are thoroughly disaffected to the rule of the dominant minority; yet the conciliatory language of the President of the Cortes was less unstatesmanlike than the factious declamation of the President of the Council of Ministers. Señor SALMERON, elected by the same majority and at the same time with Señor PI Y MARGALL, urged the Cortes to consider themselves as the representatives of the whole nation, although they had only been returned by the Republicans. CASTELAR also, whose recent conduct has justified the general faith in his political integrity, constantly warns the intolerant Republicans that the chief danger to which they are exposed is caused by their own violence and dissensions. It is not surprising that the eloquent enthusiast should be slow to recognize the disenchantment which must have been produced by recent experience. It is probable that there are no longer a dozen genuine Republicans in Spain outside the ranks of the extreme or Socialist faction. The unworthy retreat of FIGUERAS indicates the collapse of theoretical or sentimental Republicanism.

The Committee which has already begun to elaborate a new Constitution is as seriously occupied as a child planting a full-blown flower which it will probably dig up to-morrow to see how it grows. For sixty years Constitutions have been the staple product of Spanish revolutions; and it would have been difficult for the present projectors to devise any novel contrivance beyond the abolition of royalty, but for the new-fangled doctrine of Federal subdivision. It now appears that Spain and the Colonies are to be parcelled out into a dozen provinces, which are then again to coalesce into a single Republic. It is not yet known whether each State will, as in the American Union, enjoy the principal attributes of domestic sovereignty, and especially the exclusive control of civil and criminal justice. Some complication might arise if property were abolished in Catalonia or Andalusia, while it was still maintained in less advanced portions of the Federation. Conflicts are likely to arise between the little Parliaments of the component provinces and the Cortes which must necessarily receive some share of legislative and administrative power. It is scarcely worth while to discuss constitutional dreams which will in all probability not attain a real existence. The Ministers are already approaching the familiar revolutionary stage in which nominal liberty can no longer be secured except by a restriction of civil rights. PI Y MARGALL has plainly intimated his opinion that extraordinary powers must be conferred on the Government; and some members have even proposed an adjournment of the Cortes while the Committee on the Constitution is prosecuting its labours. A much more important matter than a paper Constitution is the question whether the Government will be able and willing to suppress street revolts. As the Republicans are a minority in the country, the uncompromising faction are a minority in the Cortes; but they have repeatedly prevailed over their adversaries, for the simple reason that their partisans are ready to fight. The respectable inhabitants of Madrid and the bulk of the Spanish nation would be delighted with any chastisement which might be inflicted on the insolent rabble of Madrid; but the volunteer battalions which might be inclined to support the cause of order are unfriendly to the Government, and probably they are not a match in resolution for their anarchical opponents. The regular troops in the capital are few in number, and the Ministers can scarcely trust them. No interest can attach to the deliberations of an Assembly which is from day to day subject to the dictation of an armed revolutionary mob. The rhetoric which was in former days an effective weapon against established institutions is utterly powerless to repress the excesses of the sovereign people.

The latest demand of the Uncompromising faction is intelligible and candid. A Club at Barcelona, which had previously attempted without immediate success to assume the character of a Committee of Public Safety, objects to the execution of the mutineers who lately murdered their commanding officer, Colonel LLAGOSTERA. With perfect consistency the Club requires that capital punishment shall no longer be inflicted on soldiers guilty of military insubordination. It is not likely that the proposal will find favour with the Ministers, for all Governments, whatever may be their origin, have a leaning in favour of obedience; but it is not certain that orders from Madrid will be obeyed in cities which are about to become capitals of the States of the Federation. When the Republicans were successfully exerting themselves to undermine the discipline of the army, they perhaps overlooked the possibility that they might themselves at some time have to govern the country. If the Socialists and Internationalists of Barcelona succeeded in emancipating themselves from the control of superior authority, they would in their turn require the aid of a military force to compel obedience to their commands. The MINISTER of WAR, an obscure deserter, lately spoke with levity of the possible occurrence of shooting a General, and it is impossible that his ephemeral tenure of office can insure him the willing obedience of the army. Anarchy itself, when it has dissolved society into its elements, tends to reproduce some form of organization. For a certain time Spain is perhaps destined to exist under a system which, not having yet received a technical name, may with approximate accuracy be described as the Government of the Worst. The Jacobins of 1794, though they almost exhausted the possibilities of wickedness and folly, have partially redeemed themselves from the contempt

history by their vigorous prosecution of foreign war. The army was always popular in France, though several of its chiefs were judicially assassinated during the Reign of Terror. The Spanish Republic seem incapable of repressing the Carlist insurrection, which is much less considerable or respectable than the war of Vendée. In consequence of recent changes in the condition and policy of Europe, the Republic has no foreign enemy to fear; but the country has succumbed to declamatory cant, and it has not energy enough to recover the control of its own affairs. Respectable and patriotic Spaniards must look back with regret to the days of AMADEO or of PRIM, and even to the unsatisfactory reign of ISABELLA II. Whatever might be the proceedings of the Court or the Cortes, the ordinary laws were then enforced; public order was maintained; and property was not called in question. Neither O'DONNELL nor PRIM would have listened to any discussion whether soldiers who had killed their officers ought to be shot.

The financial condition of the Republic is, as might be expected, almost hopeless. Two or three Finance Ministers, respectively holding office for less than a week at a time, have proposed extemporaneous Budgets which have been disallowed by the Cortes. Spanish credit, never highly esteemed, is now non-existent; and the Government will at the same time find itself impeded in the collection of taxes, and unable to borrow. PI Y MARGALL, though he may perhaps now be considered Conservative and reactionary, first acquired a literary reputation by translating into Spanish the Communistic writings of PROUDHON. He will scarcely be able to obtain the aid of any Finance Minister who will command confidence at home or abroad; yet it would be a lighter task to administer the Spanish Exchequer than to manage or reorganize the army. The majority of the soldiers in the ranks have but a short term of service remaining; and they have no disposition during the remainder of their military career to expose themselves to hardship or danger. The Republicans, in the days of the Monarchy, with characteristic disregard for the public interests, pledged themselves to the abolition of the conscription; and they have not yet discovered any alternative mode of raising or maintaining a regular military force. The officers regard with contemptuous disgust the upstarts who have spread mutiny throughout the army; but any disposition to revolt would be checked by the fear that the soldiers would refuse to follow their chiefs. It would have seemed strange to a political student of a century ago that a Republican form of government should in modern Europe be either impossible or intolerable. The French Jacobins were primarily responsible for the discreditable associations which have ever since attached to the cause of Republicanism. Their imitators at the present day have reproduced the vices of democracy in the most repulsive form. When every enemy of society is a professed Republican, it is not surprising that the converse proposition should be believed, even when it is only partially true. The respectable character and great ability of CASTELAR himself fail to compensate for his alliance with the most desperate and mischievous faction of his country and time.

MR. LOWE'S BANK BILL.

THE objections from opposite quarters to the new Government Bank Bill might answer one another, if it were certain that legislation was necessary. Sir JOHN LUBBOCK and other advocates of relaxation show that the conditions imposed in Mr. LOWE's Bill might probably not be satisfied at the moment when the interference of Government would, in their opinion, be most urgently required. The exchanges might not be favourable when the domestic pressure for money was most severe; and they were in fact adverse when the last suspension of the Bank Act occurred in 1866. Sir JOHN LUBBOCK also holds that a rate of ten per cent. is sufficiently high to justify an extension of paper currency. The difference between ten and twelve per cent. is perhaps of little practical importance, because the money-dealers would in case of need soon advance the rate to the point which would enable the Treasury to interfere. Those who object to the principle of the Bill contend, not that the conditions of extraordinary aid are too easy, but that the most effective check on imprudent and culpable speculation consists in the ruinous consequences which the Bill is intended partially to avert. There is a legend to the effect that a great capitalist, who was also an economist of the most rigid type, asserted on the occasion of one of the panics that, but for the suspension of the Act, every firm in London but a dozen or a score would have stopped payment the next day, and that such a result would have been highly conducive to the future stability of trade. Less extreme theorists maintain that debtors ought in all cases to meet their liabilities, or to incur the penalties of failure. When the supply of money is artificially increased, its value diminishes in proportion; and the creditor may in some instances be deprived to a limited extent of the reward which would have been due to his foresight and prudence. Even if it were universally admitted that the restrictions on the amount of paper currency ought to be relaxed in times of panic, the expediency of providing for such emergencies by law might still be disputed. The anomaly of permitting foreseen irregularities appears to have been considered by the Government as a strong reason for legislation; but if the object is to render interference difficult, and yet not impossible, the responsibility incurred by a Chancellor of the Exchequer who suspends the Act offers perhaps a better security against undue interference than the severest conditions established beforehand.

The most plausible argument in favour of the Bill is contained in the enactment by which the Treasury is to be satisfied "that a large portion of the existing amount of Bank "of England and other banknotes in circulation is rendered "ineffective for its ordinary purpose by reason of internal "panic." The implied and well-founded assumption that banknotes are likely to be demanded and hoarded in times of panic, is the best illustration of the soundness of the paper currency of England. A run for gold appears not to be contemplated by the authors of the Bill as a distinct and separate risk against which it is necessary to guard. All modern panics have taken the form of an apprehension that discount would be unattainable, not that notes would cease to be convertible. While bankers and other traders are increasing their stock of gold and of notes, the available amount of currency which remains is necessarily smaller. The most conspicuous effect of an occasional suspension of the Bank Act is to allay the general alarm, and consequently to disperse the accumulations which have been made in anticipation of danger. In 1857 the announcement that the Bank was authorized to issue additional notes sufficed to terminate the panic without producing any actual expansion of the currency. In 1866, when there was a simultaneous demand for money at home and abroad, an additional issue of notes failed during several weeks to diminish in any great degree the scarcity of money. The rate of discount remained at ten per cent., and perhaps it might have been raised still higher with advantage. No solid trader would be seriously injured by almost any price which could be temporarily paid for the use of money, if only he could be assured of obtaining ample accommodation. The best remedy for domestic scarcity is to attract money from abroad, which can only be effected by raising the rate of interest so as to make the transmission profitable to capitalists. Mr. LOWE has made the suspension of the Bank Act conditional on the previous contingency of a flow of gold setting towards England. If it is in any case desirable to relax the ordinary rule, it can scarcely be contended that the worst panics should be excluded from the hope of remedy; yet it is true that a measure which tends to lower the rate of discount, or to check its increase, tends to discourage the influx of bullion.

The stipulation that the profit of an extended issue shall accrue to the Treasury is unobjectionable, although captious critics might suggest that the Government or the State ought not to have a pecuniary interest in relaxing the ordinary law. It is not to be supposed that any Finance Minister would be biassed in the exercise of his discretion by the prospect of making ten per cent. for a few weeks on bills discounted with notes issued for the express purpose. The alternative of allowing the Bank of England to retain the profit would have been both less equitable and more invidious. As it is possible that a crisis might have been produced or aggravated by errors in the policy of the Bank, it is not desirable that the shareholders should derive a benefit from the misfortune of the trading community. The two per cent. which is to be allowed to the Bank for expenses and risk is certainly not excessive. The extraordinary issue is, like the permanent excess of notes over bullion, to be guaranteed by a corresponding amount of Government securities. It is scarcely possible that the operation should endanger the solvency of the Bank; but it is difficult to reconcile a process equivalent to a temporary deterioration of the coinage with sound financial principle. When the amount of banknotes in circulation is said to be rendered unavailable for commercial purposes, the framers of the Bill mean that money is hoarded by the actual holders, as corn or cotton or any other commodity is with-

held from the market when the supply is insufficient to meet the demand. In all instances dearth is the corrective, as well as the immediate result, of scarcity. It is singular that during three successive panics within a quarter of a century the experiment of a higher rate of discount than ten per cent. has never been tried. A demand for accommodation at fifteen or twenty per cent. would, unless it increased the panic, probably tempt lenders who had not been accessible to more moderate offers. Mr. LOWE, by his adoption of twelve per cent. as the point at which exceptional interference may become necessary, shows that he considers the suspension of the Act by his predecessors to have been more or less premature. It is true that the immediate cause of suspension was not the high rate of discount, but the apprehended exhaustion of the fund on which traders rely for the fulfilment of their engagements. A year or two ago the American Secretary of the Treasury reissued, in violation, as it was thought, of the letter and spirit of the law, a large amount of Government notes previously withdrawn from circulation, for the avowed purpose of mowing the crops, or, in other words, of conferring a boon on the Western farmers at the expense of the rest of the community. The new Bank Bill renders legal a proceeding which is evidently irregular and partial, though the maintenance of the solvency of the mass of traders in times of crisis may possibly be an object sufficiently important to justify the anomaly. The balance of authority, if not of argument, perhaps inclines in favour either of legal or of arbitrary interference, and in questions of this kind special knowledge perhaps affords safer guidance than abstract reasoning. It would seem that Mr. LOWE and Mr. GLADSTONE waver between two opinions; for the Bill would in some respects increase the stringency of the existing practice, although it admits the contingent expediency of relaxation. In 1866 the CHANCELLOR of the EXCHEQUER authorized the suspension of the Bank Act when two out of three conditions imposed for the future by Mr. LOWE had not been satisfied. If the Bill were passed, Governments would in future properly refuse to incur the responsibility of suspending a law which had been recently modified by Parliament for the express purpose of rendering irregularities unnecessary. Bankers and traders would consequently in their utmost need be compelled to wait till the rate of discount rose to an unprecedented height; and even when they were willing to pay twelve per cent., they would be at the mercy of foreign operators, who might perhaps have rendered the exchanges unfavourable to England. It may be forcibly contended that a safety-valve should be adapted to the escape of steam which had been before dangerously confined. On the other hand, Sir J. LUBBOCK's amendment seems to offer excessive facilities for an expansion of the currency. It by no means follows from the existence of a ten per cent. rate of discount that a serious panic is to be apprehended; but when money is unusually dear there is always a certain amount of apprehension, and the circulation is diminished by hoarding. On the whole, it would perhaps be better to tolerate for the present the possible or periodical recurrence of an administrative anomaly. A Minister is likely to be cautious when he is consciously breaking the law.

THE BATH ELECTION.

THE Bath election will now have given occasion to nothing but a contest of the most pleasant and amicable kind between the Conservative candidate Lord GREY DE WILTON and the Liberal candidate Captain HAYTER. These candidates fought for their respective causes with energy, but with the utmost moderation. They had been at school together and wished each other well, and they do not appear to be divided by any but the most nominal differences of political opinion. In the place where an election is held, each party naturally likes to win, and the Liberals at Bath have been stimulated to some kind of excitement by the desire to retrieve their recent defeat. But from the point of view of general politics it appears to be of no more importance which candidate wins than if the contest had been a cricket-match. The present Government can confessedly do nothing. It just manages to remind the world that it is in existence by affording such matters of controversy as the Zanzibar Contract, and by offering such astonishing instances of official indiscretion as the recent order of the War Office that men accepted as recruits below the standard of measurement should, for the purpose of a Parliamentary return, be described as having attained the standard. The Government lives on, doing nothing, and a new Liberal member for Bath would only help the Government to do nothing, while a new Conservative member would only add to the number of the party which watches the Government doing nothing. Captain HAYTER, in addressing his Bath friends, naturally referred to the great services and distinguished career of Mr. GLADSTONE, and every one who thinks Mr. GLADSTONE's Irish measures substantially good must allow that this personal argument has great weight. Mr. GLADSTONE is entitled to some reward; but then what is the personal object that, as he himself has declared, he has most at heart? It is rest; he wants to be allowed to go out of office and recruit his strength and spirits. Lord GREY DE WILTON is therefore perhaps more likely to help Mr. GLADSTONE to reach his wished-for goal than Captain HAYTER. The return of the latter would be the greater immediate compliment to Mr. GLADSTONE, the return of the former may do Mr. GLADSTONE the most real good. The result of the Bath election is accordingly of no great moment, but there are one or two points in the history of the struggle which are worth noticing. The Liberals appeared throughout the contest to be in very good spirits. It was evident that something had happened to cheer and elate them. They spoke as men who had been lately defeated, but who had now a certain promise of victory. The secret of their cheerfulness was this. They had secured the great beer interest. At the last election their man had foolishly defied beer, and was ignominiously beaten. But they had been wise enough to take the lesson to heart. They secured in Captain HAYTER a candidate after the publicans' heart. He adored beer and every one who sold it. He scorned the base Permissive Bill as an attack on the first principles of drink. He lauded the publicans to the skies. They had behaved in the most noble, the most gallant manner, and presented the finest example of heroic public spirit. What Captain HAYTER meant was that the Liberal publicans, having found that the Liberal candidate was thoroughly sound on the beer question, had seen no reason why they should desert their party, and would condescend to vote for him. There is nothing whatever to blame in Captain HAYTER's conduct in the matter. He has already sat in Parliament, where he gave many indications of sense and capacity, and he was not at all likely to be misled by the nonsensical crotchet of the Permissive Bill. But nothing could mark more strongly the difference between the early and the latter days of the present Parliament than that, instead of the furious excitement and discussion of blazing questions of 1868, there should now be a languor so intense that the Liberal candidate announces to his supporters as the crown of his triumph, that his humble efforts have received the blessing of the publicans.

But at one time things did not promise to go on at Bath with the smoothness with which they began and ended. Into this happy political arena, where two schoolfellows, arrayed in their respective appropriate colours, were playing a quiet gentlemanly match for a seat, down came, like a thunderbolt, Mr. COX, of the National Education League. The object of this gentleman's mission was not to get a seat for himself in Parliament, but to punish the Government for not having done with regard to education all that Mr. DIXON desired they should do. The Liberal party was to be divided, and the Liberal candidate to be defeated, in order that Mr. GLADSTONE's Government might see what angry Nonconformists could do. Unnumbered woes were to illustrate the wrath of the League, and then perhaps it would get its way. The advent of Mr. COX spread dismay and consternation into the Liberal ranks. Victory seemed to be snatched from them just when it appeared so certain, and they had worked so hard to secure it. It was agonizing to think that even the publicans might have been pleased in vain. Some irritation was natural under the circumstances; but unfortunately the irritation that was awakened showed itself in the form of a most dastardly outrage. Mr. COX had arranged to address the electors in the Guildhall, and was coming up the staircase to the platform with two friends when he found himself in the midst of an excited crowd, which at first proposed to get rid of his candidature altogether by throwing him out of the window. This was, however, thought to be going rather too far, so the rioters contented themselves with throwing cayenne pepper into his eyes and the eyes of his friends, and temporarily blinding them. They then proceeded to push their victim downstairs; but, as the local papers put it, "luckily, when "Mr. COX had fallen some distance, he was caught round the "waist by two policemen." The rioters are said to have been well dressed and their names must have been known to many people; yet no one was taken up, the policemen did not interfere, and although Mr. COX offered a reward for in-

he offered it in vain. Captain HAYTER at once denounced the proceeding as it deserved, repudiated all connexion with it or approbation of it, and expressed the greatest sympathy with Mr. COX. There was not, therefore, any shadow of reason for making Captain HAYTER responsible for the mischievous folly of his friends; and no one apparently, except one lady who spoke at a meeting on the highest possible principles, thought of suggesting a calumny against Captain HAYTER. But the disgraceful fact remained, that mere political differences could in a great and orderly town like Bath lead to an act of brutal violence and blackguard ferocity, and that the perpetrators were by no means men of the humblest social rank. The fact also remains that it was tacitly agreed to pardon this disgraceful conduct on the old plea that it will not do to be too censorious at election times. The plea is as wretched as the act was disgraceful, but we may hope that this was a mere survival of the habits of old times, and that gradually, as the memory of former elections with their riots and nomination days dies away, such a scene as has occurred at Bath will become impossible.

Mr. Cox ultimately retired, but it must be owned that he had not altogether lost his time. He got a small, though inadequate, return for the cayenne pepper in his eyes and for his descent into the arms of the policemen. He managed to make Captain HAYTER adopt his educational programme, and issue a statement that he was in favour of compulsory education and of School Boards being set up everywhere, and that he did not consider the proposal to transfer the payment of school fees to the Guardians a satisfactory one. It makes no difference in real life whether Captain HAYTER takes this view of the educational question or not, as the party with which he has thus associated himself is powerless in Parliament. But one of the greatest of the obstacles that deter men of principle and character from standing for boroughs is the number of pledges which they find themselves obliged to give; and although most candidates in his position would have done what Captain HAYTER did, it is to be regretted that men of standing and promise should thus find or think themselves obliged to forfeit a portion of their political independence. It is necessary both for the candidates and the electors that a firm stand should be made against the dictation of crotchet-mongers. On the whole, Bath has set a good example on this head. Mr. COX was the idol of all the forlorn people who had got a crotchet to air. He was of course for the repeal of the Contagious Diseases Acts, for Women's Suffrage, and the Permissive Bill, and he thus secured the support and advocacy of a Miss ASHWORTH, who addressed a public meeting on his behalf, and vowed that she considered principle above everything, and assumed to speak on behalf of her sex generally in declaring that the first thing women have to do is to see that a candidate is dead against the Acts on which rampant ladies love to dilate, and she believed that an inundation of female voters is exactly what the constituencies want to make them perfect. But Miss ASHWORTH apparently addressed a whole audience of GALLIOS, and no one seemed to care much for her or her opinions. Captain HAYTER was also enabled to assure his friends that, although he had conciliated the publicans, yet many temperance men were going to vote for him, which, it must be said, was highly creditable to the temperance men, as they knew that they had been the cause of the defeat of the Liberal candidate at the last election, and that it was the support of the beer interest on which Captain HAYTER mainly grounded his hopes of success. The chief lesson to be drawn from the Bath election is that, provided the publicans are satisfied, the opposition of other special interests is not very formidable. It would be a great deal more satisfactory if a Liberal candidate could hold himself independent of the publicans as well as of the temperance people; but it is something that, with their support, a decently honest man may hope to escape having to descend into the slough of abjuring the conclusions of common sense in order to secure the good will of a variety of petty and fanatical cliques.

THE FUNERAL QUESTION AT LYONS.

FORTUNE has not shown herself implacable even to M. BEULÉ. His speech in defence of the decree regulating civil burials lately issued by the Prefect of the Rhône was arranged with much skill, and probably did a good deal towards securing a majority for the Government. The Prefect of the Rhône has ordered that every notice of death shall be accompanied by a statement whether the funeral will be of the period by a minister of any of the religions recognized by the State; that in the event of its being proposed that no such minister shall attend the body to the grave, the funeral must take place at six in the morning during the six summer months, and at seven in the morning during the six winter months; that the funeral procession shall pass through the least frequented streets, or by a special route to be ordered by the Prefect; and that no collections shall be made in the cemetery. Before the Minister rose it seemed impossible that anything could be said in defence, or even in palliation, of this monstrous decree. If men are to be left free during their lives to profess any religion or no religion, to attend any form of worship or none, to decide whether they will be married in church or be content with the civil ceremony, whether they will have their children baptized or merely insert their names in a civil register—and on all these points even the Right in the French Assembly would hardly venture to restrict individual liberty, however keenly they may wish to do so—why should this liberty be suspended in the single case of burials? From an ecclesiastical point of view it is of much less moment that a corpse should receive Christian burial than that a child should receive Christian baptism, that a man should set the seal to the convictions of a life which is past by rejecting the priest at the grave, than that a man and woman should give an anti-religious tone to the lives which they have yet to lead by repudiating the priest at marriage. From any other point of view it seems impossible to draw any distinction between one act and another. Liberty of conscience means that each man is to be free to profess and practise as much or as little as he believes, without being the worse for his choice in any of the secular relations of life. Conscience is not free if those who do not belong to the religion recognized by the State are compelled to carry their dead friends to the grave, or to be themselves carried there, at inconvenient hours and by inconvenient routes. It is as much a penalty on wrong belief as if Protestants were only allowed to hold their services at night, and forced to build their churches outside the city walls. The inconsistency of the Prefect's decree is all the more conspicuous because the Roman Catholic Church, in whose interest it may be supposed to be framed, is by no means over-ready to bury persons with whose conduct in life it is dissatisfied. The Paris Correspondent of the *Times* yesterday mentioned a case in which a priest positively refused to attend a corpse to the grave because he had arrived too late to administer the last sacraments. If a Protestant minister had not consented to take his place, there would have been no choice left to the family but to have a civil burial. On grounds, therefore, of abstract principle, of ecclesiastical consistency, and of the action of the Catholic clergy themselves, the decree of the Prefect of the Rhône is altogether indefensible; and yet it was this decree that M. BEULÉ, already discredited in the Assembly by his circular on the press, was obliged to defend on Tuesday.

He began by treating the question as having exclusive reference to Lyons. Speaking generally, he declared that burials without religious rites ought to be, and by French law were, as free as burials with religious rites. But at Lyons civil burials imply much more than the mere absence of a priest; they are part of an aggressive organization which stops at nothing which is necessary to its purpose. For the last two years they have been under the management of an association called the Society of Free-Thinkers, which takes for its motto "No priest at birth, no priest at marriage, no priest at death." The funds of the Society go to defray any expenses to which its members may be put in avoiding ecclesiastical ministrations at these times. It declares that its object is to increase by every means in its power the number of persons who prove their independence of theological superstitions by limiting themselves to civil ceremonials, and every member of the Association and of its allied Societies is bound under pain of fine to attend every civil funeral of which he has notice. It is clear that death is the only one of the three occasions mentioned in the Society's motto in which this general concourse of members can be of much use. There would be a certain want of point in making a party to see a child not christened, and as the civil ceremony at marriage always takes place whether there is or is not a marriage in church, there would be no means of making it evident that the couple at whose civil union the Society had just been assisting might not be meditating a marriage in church the next day. Only a funeral combines the two essential requisites—a necessary ceremonial of some kind, and an unmistakable exclusion of the religious element; and consequently it is to the multiplica-

tion of civil burials that the Society of Free-Thinkers address all their efforts. The first requisite of a civil burial, as the Minister justly observed, is something to bury; and if M. Beulé's statements are exact, the Lyons Free-Thinkers are not scrupulous as to the means taken to satisfy this indispensable condition. Their object is to impress the public with the belief that they are a far more numerous body than they really are, and they achieve this by bribing persons who are themselves careless on the subject to give up to the Society the bodies of their dead relatives. In most cases poverty is the motive of the bargain; widows are tempted to sell the bodies of their husbands, orphans the bodies of their parents. In other cases the motive is the absence of any strong affection, as when parents sell the bodies of their new-born children. In a great number of cases, says M. Beulé, the persons thus buried have lived religious lives, and have even declared their horror of being buried without a priest. Two children are specially mentioned as having made their first communion shortly before death, and having then been buried at the wish of their fathers without any religious ceremony. One of them, a boy of eleven, was followed to the grave by more than four thousand Free-Thinkers. It is further stated, on the authority of the Lyons police, that they are often appealed to by the families of dead persons for protection against annoyances offered to them by the Free-Thinkers on the ground of their refusal to have their relatives buried by the Association. Reinforced by these means, the civil funerals at Lyons have reached the number of 107 during the two last months, so that once or twice every day public order has been disturbed, and the feelings of the Catholic population outraged, by the passage of these irreligious processions. The most busy hour of the day is chosen, the body is carried through the most crowded streets, and the attendants at religious funerals are often insulted when they accidentally meet one of the civil funerals.

Some allowance must probably be made for convenient exaggerations; but we are inclined to believe that M. Beulé's account of the state of things in Lyons is substantially true. Here in England we have little knowledge of the furious and unscrupulous hatred of which religion in every form is the object in some Continental countries. It may be that the fact is in a great measure accounted for by the political action of the Roman Catholic Church; but that it is a fact of which Governments have to take account, and which may at times justify measures of unusual severity, hardly admits of doubt. M. Beulé is best answered, not by denying the right of the Prefect of the Rhône to subject civil burials to exceptional regulations, but by denying that the particular regulations put forth by him are those best suited to the object he professes to have in view. M. de Pressensé, who spoke next after M. Beulé, expressed as great an abhorrence of the proceedings of the Society of Free-Thinkers as the Minister himself, but he insisted that their misdeeds ought to be punished without the liberty of burying their dead at whatever hour they liked being denied them. Under the Prefect's decree no man who is not a Christian can be buried except at an hour which seems to convey a sort of censure on the opinions he held during life. Why should a man about whose desire to be buried without religious rites there can be no question be made to suffer for the sins of a Society with which he may have had no connexion? It is possible that M. Beulé might reply that the action of the Society is so secret that there is no means of defeating it except by depriving civil burials of the publicity with which the Free-Thinkers seek to invest them. But his own evidence seems to prove the contrary. If the police are often invoked to protect families against the intrusion of Free-Thinkers who wish to undertake the burial of some dead relation, why cannot the intruders be punished as well as defeated? And even granting that M. Beulé is right, to confine civil funerals to particular and inconvenient hours is not the proper way to deal with the evil. Such a restriction is too sweeping as regards the persons affected by it, and not sufficiently efficacious as regards the manifestations which it is directed to check. It applies to all persons who wish to be buried without the intervention of the ministers of a religion in which they had no faith during their lives, as well as to those who wish to make their funeral an occasion of propagating their opinions; and instead of preventing a crowd from collecting, it only makes its collection the more remarkable from the fact that those who compose it have had to attend at the cost of some personal inconvenience. A better plan would have been to limit the number of persons allowed to follow the funeral procession through the streets or to accompany the body into the cemetery. Probably, however, a decree of this sort would have been far less popular with the majority in the Assembly than the decree actually issued by the Prefect. The Right are not satisfied with insulting those who insult them; they are equally anxious to insult those whose only offence is that they hold opinions which the Right do not hold.

MR. HARCOURT'S CONSPIRACY BILL.

Mr. Harcourt's Bill for the amendment of the law of conspiracy as applied to Masters and Servants will scarcely become law in the present Session, or in the form in which it has been drawn. A part of the first clause would of itself accomplish Mr. Harcourt's main object, and perhaps it might be just or expedient that no person should be prosecuted for a trade conspiracy unless the contested acts were in themselves offences indictable or punishable. It is a more questionable provision that the punishment for such a conspiracy should not be greater than the punishment for the act itself, and there seems to be no reason for requiring the consent of the Law Officers of the Crown to a prosecution for trade conspiracies. There is at present no officer invested with the functions of a public prosecutor; and there is a difference of opinion on the question whether the right of the party injured to seek redress might not be preserved even after the establishment of a prosecuting department. The consent of the Attorney and Solicitor General to a prosecution is required by various statutes, where the propriety of enforcing the law depends on considerations of general expediency rather than on the duty of protecting private persons from injury. But the offences which are committed by workmen against their employers and their comrades are among the most direct and formidable attacks on liberty and property. If the law declares that it is criminal to use threats or violence against those who resist the dictates of Trade Unions, no official functionaries ought to have the power of depriving the injured person of his right to protection or to compensation. Although it is improbable that any Attorney-General would be guilty of private partiality, successive incumbents of the office would be liable to the influence of special theories and of political prejudices. Some might incline to a stringent interpretation of the law, and others to absolute non-interference; and even if the Law Officers were at any time entirely free from bias, the rules which they might adopt would be regarded by prosecutors and defendants with jealousy and suspicion. The Bill itself, in its present form, indicates a leaning to the cause of the accused, which might, if it were adopted, be regarded as a legislative direction to discourage prosecutions. The preamble would have accurately expressed the occasion and object of the Bill if it had included a recital that one of the Judges had passed an unduly severe sentence against workmen indicted for conspiracy, and that it was expedient to prevent similar excesses of severity in the future. It has been often and truly said that hard cases make bad law; and though Mr. Harcourt's intervention was not officious nor unnecessary, he has been tempted into the opposite extreme of undue laxity.

During recent discussions of the question it has been generally agreed both that the English law of conspiracy is anomalous and vague, and that it cannot with safety be summarily abolished. Mr. Harcourt himself proposes to except from the protection afforded by his Bill persons guilty of combination for a mutinous or seditious purpose. It is doubtful whether mutiny is a crime of which civilians are capable; and there can be no objection to exceptional legislation for the case of soldiers or sailors who are subject to military discipline. In excluding seditious conspiracies from the purview of his Bill, Mr. Harcourt admits the principle that a combination for the purpose of committing an act may sometimes deserve a heavier punishment than that which would be awarded for the act itself. He therefore concurs with the apologists for the general law of conspiracy, although he proposes to establish a different measure of guilt in the case of conspiracies for interference with trade. There is no necessary inconsistency in special legislation for exceptional cases; but the burden of proving that the distinction ought to be made undoubtedly lies on the advocate of particular and limited exemptions. Nothing can be clearer than that a seditious conspiracy may be a graver offence than an isolated act of sedition. If a multitude casually assembled is tempted by a sudden provocation to resist lawful authority, even the ringleaders may comparatively excusable. The deliberate promoters or irregular assemblage for the purpose of in deliberations of Parliament, or of intimid

justice, are guilty of a crime which ought never to be lightly regarded, though it is sometimes condoned through factious motives. In cases of seditious conspiracy, the acts contemplated are punishable either at common law or by statute; but the guilt of those who commit the offence is confessedly aggravated by previous concert. The establishment of an opposite rule in the case of trade offences seems arbitrary and partial. That Unionists are for the moment more likely to conspire than political agitators is scarcely a reason for extraordinary leniency.

The various exhibitions of trade malignity which have acquired special names are in themselves sufficiently odious; but rattening and picketing are far more deeply culpable when they are arranged by a secret combination or by the Council of a Trade Union than when they are perpetrated without the sanction of an extra-legal authority. To a certain extent such offences are almost always the result of conspiracy; but there are various degrees of moral guilt in different kinds of criminal combination. The actual offender is seldom one of the principal promoters of the conspiracy; and it may well be that his instigators ought to incur a heavier penalty than that which would be appropriate to a simple violation of the law. The artificial equality which Mr. HARCOURT seeks to establish between parties to a conspiracy and actual offenders is not essential to his principal object. Plausible arguments may be urged in favour of the proposal that trade conspiracies shall only be punishable when they are intended to promote the commission of indictable offences. Many cases may be suggested in which conspiracies are justly deemed criminal although the object of the combination may be only morally culpable. The clubs which have in former times been actually or according to popular belief established for the encouragement of various immoral but not illegal practices, would properly have rendered their members liable to indictment and severe punishment. On the other hand, the acts of trade combinations, when they are not in themselves legally punishable, ought perhaps to be tolerated by law. Mr. HARCOURT's Bill will not provide an exemption for workmen who conspire to use threats, or violence, or molestation; but there seems to be no reason for the provision that the offence must have been created by statute. If men conspire for a purpose which is indictable at common law, they ought to be liable to prosecution. It would be advisable to remove, as far as possible, all disputable matter from the Bill, if it is to have even a remote chance of passing the House of Commons during the present Session. Even in a Bill which occupies little more than a folio page, Mr. HARCOURT has not deviated from the curious practice of legislating by reference to previous Acts. Nothing contained in the Act is to affect prosecutions under two enumerated sections of two recited Acts.

Mr. GLADSTONE's invitation to Mr. HARCOURT to undertake the amendment of the existing law was not highly encouraging. A Government which professes its inability to legislate for any particular object can only recommend a private member to remedy its shortcomings in a spirit of irony. It was not thought prudent absolutely to reject the demands of the Trade Unions, but it is convenient to remind their leaders that concessions will not be easily extorted from Parliament. Mr. GLADSTONE and Mr. BRUCE, if they approve Mr. HARCOURT's Bill, ought themselves to have introduced a similar measure. The complaints which associated workmen have urged against the present state of the law are perfectly sincere, though they may be perhaps unfounded, as they are certainly exaggerated. To the uninstructed and prejudiced mind the principle on which the entire law of conspiracy rests is not likely to commend itself as obviously just. It is doubtful whether Mr. BRUCE or the majority of the House of Commons were aware, at the time of the last amendment of the law, of the extent of the power which still remained to criminal tribunals. It has for some time past been admitted on all hands that combinations to raise wages or to regulate the hours of labour could no longer be regarded as criminal, or even culpable, for the simple reason that it was impossible to prevent them. The acts which render a workman liable to prosecution are few and are plainly specified. The malcontents would perhaps be satisfied if the guilt of a trade conspiracy were defined exclusively by reference to its object. Even Unionists would acknowledge that it ought to be illegal to conspire for a purpose in itself illegal. It is unnecessary to apply the same rigid standard to the measure of punishment. If a man conspires to perform an act which will be criminal if it be consummated, his liability to punishment ought to depend on the character of his conduct, and on the motives and circumstances of the case, and not on the nature of the actual offence. Parliament ought never to forget that, in facilitating the action of trade combinations, it necessarily diminishes the liberty and security of the majority of workmen which still remains outside the trade combinations.

PARLIAMENTARY PICNICS.

WHEN it was first announced that the SHAH was soon to arrive in this country, nothing could exceed the tender and affectionate solicitude which was displayed by many members of Parliament on HIS MAJESTY'S behalf. It was insisted that no expense must be spared in receiving our distinguished guest, and that all sorts of grand entertainments must be got up in his honour. Every afternoon the Treasury Bench was overwhelmed with questions and suggestions; and it was quite beautiful to see how hard-working legislators, even in the midst of their most wearisome drudgery, could still find time to think of the expected visitor, and to plan arrangements for his pleasure and amusement. Presently, however, it turned out that all this enthusiastic hospitality was not entirely disinterested, and that members, in speaking one word for the SHAH, were speaking two for themselves. Their thoughtful consideration for HIS MAJESTY assumed a less romantic aspect when it was discovered that it was only another name for consideration for themselves. It appeared that the entertainments to the SHAH were to be also entertainments to the House of Commons, and the members of that assembly soon made it quite clear that what they were most anxious about was the accommodation to be provided for themselves and their families on these occasions. It must have struck many persons that the way in which the Government was badgered on this subject day after day last week was simply indecent. Would there be a ship for members at Spithead? would there be a gallery for them at Windsor? would there be room for their wives and daughters? would trains be provided for them? and how about refreshments? Every afternoon there was a shower of these inquiries. One member, a descendant of WALLACE, grumbled because the Government would not throw in a railway ticket with the rest. Fancy a descendant of WALLACE balancing his patriotism against his pocket-money, and hesitating whether he should avail himself of a treat provided for him at the public expense because it was offered on the hard condition that he should pay his own railway fare. The next thing, we suppose, will be that members will expect to have carriages sent round to pick them up at their houses and take them to the railway station. Altogether the petty greed and vulgar rapacity exhibited by some members of the House of Commons in connexion with this matter have certainly not tended to exalt the reputation of that body. This miserable grabbing at gratuitous treats is the familiar vice of the lowest sort of vestrymen, and it is anything but pleasant to find it breaking out so violently in an assembly which ought to set an example to all other public bodies in the country. There is no particular reason, as far as we are aware, why the Houses of Parliament should be present in their official capacity at either naval or military reviews; and peers and members who have a fancy for these amusements may reasonably be left to indulge their tastes, as other people do, at their own expense.

We do not happen to remember exactly when the practice of making special provision for members of Parliament at public displays of this kind first began; but we have a notion that it is of quite recent introduction, and it would seem to be developing in a way that demands attention. In the first instance, various privileges are conceded to members as a casual favour; the next step in the process is that they are claimed as a permanent right; and then members use their influence to manufacture occasions on which they can be enjoyed, and endeavour to get them stretched so as to include their wives and families. Members seem to think that their own title to have special accommodation provided for them at public displays is clear enough, but the provision to be made for their wives and families is still an open question. Some members have no wives, and the Government has refused to allow them to take other people's; but it would seem that unmarried members resent the married ones having an advantage of this kind unless they have an equivalent.

We shall perhaps be told that this is a very small matter, and not worth making a fuss about. Our legislators, it will be said, go through a great deal of hard work for the public benefit, to say nothing of what they spend on their seats; surely they are entitled to a little relaxation, and a

trip to sea, with lunch on board ship, does not cost a great deal. It is only once in a way that these things happen, and it is churlish and shabby to grudge a cheap treat to such a deserving body. There is an obvious answer to arguments of this kind. In the first place, members of Parliament voluntarily renounce all remuneration for their services, and even insist upon paying their own election expenses. Whether this is a good system or a bad system need not be debated here; it is the system which exists, and, while it exists, it should be carried out thoroughly and scrupulously. If members are going to vote themselves treats and jollifications whenever they choose, it will be better to consider at once whether it would not be more satisfactory to give them salaries at a rate to be settled beforehand. It is also necessary to consider how far this principle of standing treat out of the public funds, if once established in the case of the House of Commons, is likely to be carried in the case of other public bodies. Last year the Metropolitan Board of Works took upon itself to erect stands in order that the members of the Board and their friends might see the QUEEN and PRINCE of WALES drive past on Thanksgiving Day. They paid the expenses out of the rates, but the auditor struck out the item as illegal, and the members of the Board have since had to refund the misappropriated money. It will be difficult to convince Boards of Works and other local Boards that it is wrong to spend a little money on an occasional treat to themselves if the House of Commons is to set the example of treating itself at the public expense. Just at the present moment all beadledom is in more or less open revolt at the efforts which are being made to cut off traditional perquisites and pickings. Vestrymen and guardians are no longer allowed to feast at the cost of the ratepayers, and find it difficult to realize the fact that they must themselves pay even for a modest biscuit and glass of sherry. The School Boards have also been warned that, if they have a mind to go in for any celebration that costs money, they must be prepared to put their hands in their own pockets, and that no expenditure of this kind will be allowed from the public funds at their disposal. It is impossible, however, that these restrictions can be maintained if the House of Commons is to get into the way of voting itself a bit of fun at the expense of the country whenever it has a fancy. There is no auditor over the House of Commons; it is, in fact, the auditor over the Government; and when we find the auditor using all his influence to force the spending body to spend money in giving him a treat, we have clearly got upon dangerous ground.

The argument that it costs comparatively little to give members of Parliament with their wives and daughters a little trip in a man-of-war, with lunch or dinner to make them comfortable, is of course no argument at all. The question is, or should be, one of principle, not of amount. Nobody would accept as a justification for a breach of the self-denying ordinance which is imposed on members the plea that there was no harm in accepting a Government contract for a small figure. It is obvious that the rule must be applied absolutely, and that it would soon be frittered away altogether if there were once to be a question of the more or less. It seems to us that the House of Commons ought, for the sake of its own honour and self-respect, to impose upon itself a similar rule in regard to spending public money on its private pleasure and amusement. It is impossible to shut our eyes to the fact that these things, when once started, have an awkward tendency to grow. In the present instance, we have seen members, not content with accommodation for themselves, demand as a matter of course accommodation for their families as well; while some of them have got to such a point that they think they are very ill-used because they cannot enjoy the jollification provided for them without paying their own railway fares. This time the House of Commons is content to share the entertainment prepared for the SHAH; but the presence of a Shah is not an indispensable circumstance, and there is nothing to prevent members from voting themselves a holiday on any other pretext. It might have been expected that, in a House elected on a cry for economy, and under a Government which boasts of its thrift, some sort of protest would have been raised against a practice which is not only improper in itself, but dangerous in its growth. As yet, indeed, no great harm has been done. All that the Government has spent on Parliament on this occasion is an insignificant trifle, but the mischief lies in the danger of the precedent, and in the probability—almost the certainty—that, if once fairly established, it will be gradually widened. It is well that abuses of this kind should be nipped in the bud, if only because it saves further trouble. Observers who are disposed to believe that more depends on the spirit in which institutions are worked than on the form of the institutions themselves, have perhaps some reason to be disquieted by various symptoms of a gradual lowering of the tone of the House of Commons. For a senate it has already, perhaps, too many of the attributes of a vestry, and it is impossible to view without alarm the spreading taint of the vestryman's worst vice. It is right and fitting that when a great country entertains a distinguished stranger, it should do so with appropriate magnificence, and nothing can be more contemptible than the hesitation of the Paris Municipality to vote any funds for the SHAH'S reception. One of the most splendid entertainments of the present week was given by a member of the Government entirely at his own expense, but the charges of public hospitality may fairly be left to the public purse. It would be well, however, that our public men should be careful to avoid incurring the suspicion that they are treating themselves in the name of their guest.

THE ARCHBISHOPS AND THE SIXTY THOUSAND.

EPISCOPAL answers to petitions for the forcible suppression of the High Church party are usually characterized by an obvious desire to bark so as to impress the petitioners with the belief that this time the bishops are really going to bite. It is the consciousness perhaps that this belief can no longer be created which has moved the two Archbishops to reply with unusual candour to the memorial against Romish teaching in the Church of England lately presented to them at Lambeth. You must not doubt, they say in effect, that we are anxious to do our duty in this matter. So far as lies in our power, illegal ceremonies and practices shall be suppressed, superstitious ornaments shall be banished from churches, and candidates who teach doctrines subversive of the principles of the Reformation shall be excluded from Holy Orders. But you must remember that our power in these matters is very small. If we were to make every complaint of violating the rubrics or teaching unsound doctrine the subject of proceedings in a court of law, the Church would be harassed by endless contests. Before the laity blame us for our supineness they ought to show a little more energy in their own behalf. They have their natural protectors in their churchwardens, and if there are to be public prosecutors in ecclesiastical matters, the churchwardens are the right persons to undertake the office. We do not believe, however, that more frequent prosecutions will bring about the result you desire. You had much better allow us to use our personal influence in our own families and neighbourhoods, and to dissuade the clergy from error by sound arguments and telling appeals to their loyalty. And even if these expedients should fail, perhaps no great harm will be done. It is true that efforts are being made to subvert the principles of the Reformation, and that the position of the Church of England as the established religion of the country is seriously imperilled by them. But superstition is not the only evil we have to fear. Infidelity is very objectionable, and indifference is very objectionable, and which of the three is the worst is more than we can undertake to say. On the whole, therefore, our advice is that you should wait upon Providence. Nothing goes on for ever, and you may be sure that this will prove as true of Ritualism as of everything else. It is an unpleasant visitation while it lasts, but, after all, where can the cause of Divine truth be so safely left as in the hands of its Author? Heaven, we feel sure, will ultimately help you, and in the meantime we see no objection to your helping yourselves. The one thing that you ought not to do is to ask us to help you.

There is not much dignity in this mode of stating the case, but for all that it expresses the facts with very fair accuracy. The "principles of the Reformation," at all events as they are understood by the two Archbishops, are not held in much favour by one of the three parties which make up the Church of England. Further, the party which dislikes these principles is very zealous and very indiscreet, and zeal without discretion is always a dangerous quality in an Established Church. On the other hand, considering that the Established Church is attacked with a great show of zeal, it is well that there should be zeal inside as well as outside, and it is by no means easy to ensure that zeal shall always be alloyed with the proper percentage of prudence. You must be content to take it as you find it. No doubt there is some point at which the two elements are blended in the precise proportions in which they most help and benefit each other, but the difficulty is to keep a zealous man in this happy state of equilibrium. Ordinarily speaking, he has hardly

he has gone beyond it in the opposite direction, and become such a specimen of pure prudence that he is only fit to be a bishop. The Sixty Thousand meet this state of things with a proposal that zeal after their fashion shall be encouraged, and all other forms of zeal forbidden. But the archbishops are wiser in their generation, and know perfectly well how impossible it would be to keep the Church of England going with no clergy but such as sympathize with the Sixty Thousand. They would be willing enough to discourage extreme Ritualists—the discouragement of extremes of all kinds is a function specially suited to the Episcopal character as it is understood in this Church and Realm—but there are a number of clergymen who, without being extreme Ritualists, are quite capable of being made so by any sustained attempt to narrow the existing boundaries of the Church of England. And then, at bottom, the bishops have as little sympathy with the Sixty Thousand as with the persons against whom the memorial is directed. In their secret hearts they probably think that the Church would be well rid of both of them. This is not the frame of mind which makes men blind to difficulties, and bent upon carrying out their views without thought or care of consequences.

In this juncture the *Times* comes forward with advice which shows even more than its ordinary ignorance of ecclesiastical politics. It is all nonsense, it says, for the bishops to deprecate endless prosecutions in matters of opinion. No one wants them to prosecute clergymen for heresy; all they are required to do is to prosecute clergymen for disobedience to the law as declared by the Privy Council on plain matters of practice, such as the position of the priest at the time of the consecration of the elements. It is possible, of course, that if the bishops showed themselves determined to enforce the judgment of the Judicial Committee in the PURCHAS case, the Ritualist clergy would surrender at discretion. But supposing they did not—supposing that they allowed themselves one after another to be deprived of their benefices, rather than abandon a practice to which they attach special significance, how long would the process be allowed to go on? How long would it be before the point was re-argued on some pretext or other, and a judgment leaving the question open delivered by the Privy Council? Or, if this expectation proved unfounded, and the expelled clergy remained out in the cold, what would be the effect of the spectacle on the fortunes of the Established Church? It stands now by virtue of its comprehensiveness. No one of its roots may be very strong in itself, but there are so many of them that they strengthen one another. The expulsion of the Ritualists would supply no new root, for the days of comprehension of Dissenters are over, and the opposition of Nonconformists is directed not against the composition of the Established Church, but against the principle of Established Churches. They would agitate against the Church of England just as actively if it consisted of only two parties as they do now when it consists of three. The only difference would be that the object of their hostility would have lost a large number of its clergy, and be harassed by all the furious controversies to which such a loss would certainly give rise. The *Times* is prepared, however, with suggestions of a less drastic character. "If the bishops have so great a dread of "prosecutions, there are other means of influence open to "them." They need not preach or confirm in Ritualist churches; they need not encourage Ritualist incumbents by allowing them the services of Ritualist curates; they may refuse to accept the services of men who have become notorious when applying for admission into their dioceses The expectation that the refusal of a bishop to preach or confirm in a Ritualist church would induce the incumbent to change either his opinions or his practices displays a curious innocence as to the relations usually existing between a Ritualist clergyman and his bishop. The main desire of the former for the most part is to give the bishop as wide a berth as possible. Inside his own church an incumbent, provided that his congregation go with him, is master of all he surveys. He stands as he likes, he lights his candles when he likes, he burns his incense where he likes. It is only when the bishop pays a visit to the church that he has to reduce his ritual to a level which will not provoke the bishop to startle, and perhaps corrupt, the congregation by some conspicuous act of disapproval. A church hermetically sealed against the bishop would usually be a church in which the practices which the bishop disapproves would flourish in especial luxuriance. The refusal of the [illegible] Ritualist curates on the nomination of Ritualist [illegible] London is open to more than one objection. It is a mean [illegible]ay of doing in part what the bishops are afraid [illegible]altogether. If the practices objected to are illegal, they ought not to be passed over in the beneficed clergy; if they are not illegal, they ought not to be punished in curates. Supposing again that a parish is worked with great energy and self-devotion by a Ritualist incumbent and three curates of the same way of thinking, and that the licences of the three curates are suddenly withdrawn, what is likely to be the effect on the influential parishioners? They see all the good works going on in the parish suddenly suspended or mutilated, and the work which has been almost too much for four men left to be done, or not done, by one. If the parishioners in question are included in the Sixty Thousand, they will no doubt view this state of things with pious satisfaction. If they are themselves extreme Ritualists, we will assume that they have no influence with the bishop. But far more often they will be neither. They will be men who, without strong opinions of their own, can yet appreciate good work, by whomsoever done, and regret when its progress is interfered with merely to gratify excited partisanship. No sensible bishop will care to excite the displeasure of men of this stamp. They are the real strength of the Established Church, and rather than offend them he will in the end license forty curates, if need be, instead of four. The third suggestion offered by the *Times* on the assumption that the bishops are afraid of prosecutions would simply result in making the bishop the defendant in a suit instead of the prosecutor. Instead of a series of PURCHAS Cases we should be plagued with a series of GORHAM Cases.* Clergymen usually "apply for admission" into a diocese when they have been presented to a living. The *Times* must have peculiar notions, both of presentees and of patrons, if it supposes that either would submit to be deprived of their legal rights without taking the opinion of a court of law.

ARCHITECTURAL WORKS IN OXFORD.

THE man who should undertake to keep a record of the architectural changes in the University of Oxford would undertake a task almost as heavy as he who should undertake to keep a record of the contemporary statutory changes. As the constitutional state of things is ever changing, so the outward face of things in stone and lime is ever changing also. As far as great public works go, the legislators have perhaps the advantage of speed over the builders. A whole system of studies or of examinations can be pulled to pieces and put together again a good many times during the time that it takes to pull down and build up again one large building, like a college or a museum. Law-making is a very easy business. As soon as some young and active legislator has a new thought, the system which was set up by acclamation a term before can be at once altered again according to the last lights. Nothing is needed for the purpose but a little talk and a little printing; no great expenditure of money is needed; as for reflection and experience, those are things which it has long since been found out have nothing whatever to do with the matter. It would be more serious if, as soon as a hall or a gate-way-tower was built, or perhaps while it was still building, it had to be pulled down because some ardent devotee of culture had hit upon something prettier than the last design. Thus great buildings of this kind are somewhat slower in their growth than statutes, and they are less easy to be got rid of when they have once grown up. But, if we may take in private buildings as well as public, we suspect that the works of the architect grow up yet faster than the works of the legislator. A generation back the academical population of Oxford consisted mainly of Fellows and undergraduates, who lived mainly within the walls of the colleges, save those few graduates and senior undergraduates who lodged in the houses of the citizens. The married graduates consisted mainly of Heads and Canons, who had, in defiance of Queen Elizabeth, contrived to find places for their wives and children within the college walls. A few married Professors here and there contrived to find houses for themselves in the older parts of the city. But now that Fellows of colleges live everywhere except in Oxford, while all kinds of people live in Oxford except Fellows of colleges, the growth of private houses has become the great feature of the place. New suburbs are springing up, each consisting of new and elegant houses, each of which thinks it a duty to be built in a style different from the style of any of its neighbours. Now a single house, unlike a great public building, may be put together in as short a time, and with as little thought, as a statuté itself. And, as there is but one Legislature while there are many builders, more houses than statutes can be going on at the same time. Thus, if we take public and private buildings together, we may say that architectural change and legislative change go on at pretty nearly the same pace. Far be it from us to attempt to criticize, or even to chronicle, all the works of either. But here and there something happens or does not happen, something gets built or fails to be built, which can hardly be passed by without notice by any one who professes to keep any kind of eye upon Oxford matters. We will pick out two specimens of what has been and of what has not been done. And as, in the order of nature, nothing comes before some-

thing, as chaos is more ancient, and therefore, we suppose, more honourable, than Kosmos, we will say what we have to say about that which has not been built before we rise to the harder task of speaking of that which has been built.

Every visitor to Oxford for some time past must have remarked that a large part of the High Street has been fenced off with a wooden wall, the object and merits of which are less clear than the objects and merits of the older wooden walls either of Athens or of England. Such a wooden rampart commonly marks the place where something is being built. Here it marks the site of a building about which all that is as yet settled is that it is not to be built. No one has yet begun to lengthen the cords and strengthen the stakes of any great building on that spot. All that has as yet arisen on the famous "Angel site," a site which has filled so great a place in the dreams of many an architect and amateur, is a crop of yellow flowers which might cheer the heart of a Liberal candidate in these days of reaction, which might afford materials for a field day for the Professor of Botany, but which may be thought a poor substitute for the great academical building which has been so long talked of as about to arise on the spot. New Schools were to have been built there; but all that has as yet been done towards building them has been for Convocation to throw out the design which its own Delegacy proposed to it. Perhaps indeed it may not be too late to go back to first principles, and to ask whether, in these days of progress, so antiquated and forsaken a region as the High Street is a fit place for academical buildings at all. Such a site might have been all very well a thousand years back, when King Alfred stopped out of his own realm to found a college on another man's territory, when doubtless at the same time he designed the two gateways and the many gables which show how, in his material buildings as well as in the nature of his foundation, he hit upon ideas which so strangely found no imitators for so many ages. But we have got beyond this stage. Oxford is no longer pent up in the cloistered seclusion of colleges, or imprisoned within the streets of a mediæval city. The real University, its teachers, its society, its amusements, all that distinguishes the Oxford of to-day from the Oxford of thirty years back, have taken flight far beyond the ramparts of Robert of Oily and William of Wykeham. It may be fairly questioned whether, for the general convenience, new Schools or new public buildings of any kind should not follow the tide and set themselves up in the newer and more fashionable quarter. But, letting this question pass, a word or two may well be said as to the design which was recommended by a Delegacy, but which was thrown out by a small meeting of Convocation. The design had its faults, but it also had its merits; and it would be well to know whether it was on account of its faults or on account of its merits that it was cast aside. Without going more into detail, it is enough to say that the street front was not a front but a side. A front should consist of a gable, a tower, more than one gable or more than one tower, and the entrance, as in the old colleges, should be made the main feature. In the design for the new Schools the face to the street consisted, not of a gable or a tower, but of a ridge, like that of a hall or a chapel looked at from the side. And the doorway was not made the chief feature, but looked rather like an afterthought. The main building would have had a noble effect as one internal side of a college quadrangle; but it was not suited to be the street front of a great public building. On the other hand, the adoption of the design would, in the present state of Oxford architecture, have been a wholesome step backwards. The design was English; it was straightforward. It would have been better still if it had more strictly followed the forms of a somewhat later date, when English secular architecture reached its highest point of splendour at Westminster, at Eltham, at Thornbury, in Oxford itself. Still it contained some parts fit to range with the very best pieces of English secular architecture, though as a whole the air of the building would have been too ecclesiastical. Notwithstanding all this, for a public building to have been raised in Oxford, purely English in style and distinguished by no crotchets or queernesses, would have been a vast gain after the mass of foreign vagaries under which the University has suffered for the last five-and-twenty years. Now we greatly wish to know whether the design was rejected because of its real faults, or because of what in many eyes would be the greatest of all faults, the unpardonable crime of Englishry. We have hardly any means of knowing which it was. Convocation was taken by surprise, as it not uncommonly is. On the very eve of the voting, when it was wholly impossible for any one not on the spot to do anything in the matter, a paper came out signed by three sets of initials which to most people gave no idea, and one of which, it was rumoured, represented a gentleman who is not a member of Convocation at all. The objections to the design were set forth in that mysterious dialect which is perhaps intelligible to the votaries of culture, but which left ordinary minds uncertain what the grounds of the rejection were. Convocation met; Mr. Rogers made a speech which won him a place in *Punch*; but the real question was not discussed; there was no time for anybody to be there to discuss it.

Now what is to come of this? If the design has been thrown out on account of its faults, if its rejection is likely to lead to the choice of some other design, as strictly English in style, but allowing a larger quadrangle and making the street front more truly a front, we shall be the last to grumble. But if it is thrown out, simply for being English, if it is sacrificed to the strange foreign taste of the day, if it is thrown out in order to bring in something like new Merton or new Christ Church, then every Oxford man who values the architectural reputation of his University should be on his guard that Convocation may not be surprised a second time.

From what has not been done we turn to what has been done. Every one who has lately been in Oxford, every one who has had much talk with those who have been there, must have heard something about the "meat-safe" and the "tunnel." All the wits of the place have had their fling at them, while we have not heard that any one has been so hardy as to say a word on their behalf. Both of these great works are connected with the late restoration of the cathedral. It has been found expedient to take away the bells out of the central tower, where in truth they ought never to have been put, and some other place had to be found for them. A detached bell-tower was the obvious thing; but a tower like Pisa, or even like Chichester, cannot be built in a day, and some temporary place had to be found. But even a temporary tower need not be absolutely hideous, and surely something better could have been done than to stick up the monstrous wooden box at which all Oxford has been laughing ever since by the name of the "meat-safe." Of all places in the world, this ugly box is set on the top of that noble staircase which stands unique both at Oxford and elsewhere, and which shows what English architects could do even so late as 1640. To such a building as this we can hardly complain that a part even of the old cloister was sacrificed; and surely it deserves some better treatment than to be crowned by a capping at which every one who passes under the great gateway points the finger of scorn. Rumour, to be sure, says that it is to be only temporary; but rumour also adds that this temporary work has cost 2,000*l*. Rumour also adds, what is more wonderful still, that, when the temporary period shall have passed by, the four walls of the staircase are to be carried up so as themselves to grow into the bell-tower. We tremble when we hear of such a scheme, lest the only result should be to bring down that exquisite roof and central pillar which is the one great ornament of the college as distinct from the older monastery. But, if no such ill luck should happen, let us try and enlarge our faculties to conceive what would be the size of a tower carried up from such a basement, with anything like the reasonable proportions of a tower. Beside such a tower, Wymondham, Boston, Ely, San Zeno itself, would be trifles; it would be almost entitled to rank next to the Great Pyramid. The comparison is stale, but it irresistibly reminds one of the first of all attempts at tower building, the "donjon" of Sir David Lindsay, whose top was to reach to heaven. Perhaps indeed that may be the object. Tradition says that a former Dean of Christ Church defined the advantages of learning to be, that "it not only enabled us to look down with contempt on our inferiors, but often led to places of very considerable emolument, even in this life." Should the emoluments of the deanery of Christ Church ever be made less considerable, the contemplated tower would supply a means of going up to seek for those still more valuable rewards of learning which it would seem that the author of the saying we have just quoted expected to find in another world.

So much for the "meat-safe"; now for a word as to the "tunnel." Every one who knows Oxford knows that the nave of St. Frideswide's church, which afterwards became the cathedral of the diocese, was cut short by Cardinal Wolsey to make the great quadrangle of his college. The minster has therefore a very inadequate nave, and no west front at all. The place where the west front ought to be is occupied by part of the quadrangle till lately forming one of the canons' houses. In such a case there are two alternatives. The thing may be left as it is, as a piece of destruction for which the present age is not responsible, and the blame of which must rest on the great Cardinal. Or, on the other hand, the work of Wolsey may be thoroughly undone. The uniformity of the quadrangle may be sacrificed to the perfection of the minster; the nave may be carried out to its original length, and finished with a fitting west front. For either of these courses there is a good deal to be said. But there is surely nothing to be said for the course which has actually been followed. The nave has been prolonged westward, but only so far as to make a half arch, abutting on the back of the quadrangle. Two holes have been bored in the other wall of the quadrangle, leading into a vaulted space which again opens into the church to the east. This space is popularly, and very naturally, known as the "tunnel." Such a compromise as this is simply a case of doing things nohow. The regularity of the quadrangle is broken in upon, without providing the church with a west front or with a worthy approach of any kind. No one would expect to find the way into St. Frideswide's minster through two doorways just so much bigger than the other doorways of the quadrangle as to make every one ask what they mean, and which have the domestic windows of the college carried over them. Perhaps, like the "meat-safe," the thing is only temporary. The new half-arch indeed suggests the idea that the nave may some day be carried on further, but the "tunnel" itself is done in a way which looks very much as if it were meant to be permanent. Perhaps, after all, what the authorities of Christ Church meant to do was to give an architectural illustration of the famous definition of a dilemma, that it is "when a man attempts to prove two things, and proves neither." If this be so, they certainly succeeded beyond fear of rivalry.

SOCIAL ANATOMY OF THE SECOND EMPIRE.

IN its time the *Daily Telegraph* has certainly had some very wonderful Correspondents, and perhaps none of them have been more wonderful in their way than the gentleman who was until lately its representative in Paris. Originality has not always been the strong point of Correspondents of that journal, but at least this one was original. There never was anything like him before, and there has never been anything like him since. His successor or successors have been only a weak imitation of the original article, and the recent spasmodic effort of one of them to distinguish himself by telegraphing in breathless haste a long and detailed narrative of a particularly confidential interview with a too celebrated lady who had just been requested to relieve Paris from her presence was almost a confession of despair. It has been thought worth while to reprint a collection of the great Correspondent's letters, under the title of *Court and Social Life in France under Napoleon the Third* (Tinsley Brothers), and it must be said of them that they constitute a worthy monument both of the *Daily Telegraph* and of the Second Empire. From the preface we learn that the Correspondent had had some personal acquaintance with the Emperor in the devious bypaths of his shady exile, and this won for him "peculiar social advantages" at Paris. We are also assured that his "style was peculiarly his own." It would certainly appear that, by a rare combination of remarkable qualities, he was peculiarly fitted not only to represent the *Telegraph*, but to be the chronicler of the Empire. The friend of royalty, the confidant of chamberlains and statesmen, the cherished darling of aristocratic coteries, descended to common earth when he sat down to describe the doings of Olympus. He had a happy way of writing history in the racy language of the Turf and the smoking-room. His letters had all the charm of that free and easy conversation which is associated with unbuttoned waistcoats, seltzer and brandy, and short black pipes; and an unbuttoned Correspondent was obviously an appropriate historian of a *débraillé* Empire. The writer of the preface assures us that, although the letters may seem at first sight scattered and incoherent, there will be found running through them "a distinct idea, steadily gathering consistency and strength," and this is certainly true. The volumes have really an historical value, for they illustrate in a very striking way the peculiar social characteristics of the Second Empire, and enable us to understand the sort of loathing and contempt with which the Bonapartist Court was regarded by all decent people in France.

The truth is, that down to its last hours the Empire could not shake off the evil taint of its origin. The political crime of the *coup d'état* most Frenchmen would have been ready to forgive, and probably had forgiven. It was the social surroundings of the Court which ruined it. All at once a little knot of men who until a short time before had been living from hand to mouth as mere adventurers, swindling tradesmen, bilking landladies, punting in low hells, and otherwise exercising their wits in the pursuit of a precarious livelihood, suddenly found themselves the masters of one of the richest countries of the world. The transition might have been too much even for a more austere virtue than was represented in a circle to which the creator of Vautrin could alone have done justice. As it was, the result was inevitable. The *filoutage* of Mazarin and Fouquet was revived by the conspirators of December. Never perhaps before in the history of the world was so much hungry scoundrelism suddenly put in the way of helping itself to what it wanted. The leader of the set had to tolerate his companions, and found when too late that they would not submit to the prudent restraints which, for their own sake as well as for his own, he would have liked to impose. If he had been a very great man he would possibly have got rid of troublesome associates by banishing or shooting them; but then he was not a very great man, but easy, kindly, and generous in his private friendships. And besides, unless he had done it very boldly, it might have been dangerous for him to break with his former confederates. It is the penalty of all conspiracies that, however excellent may be the motives with which they are undertaken, they cannot be accomplished except by the aid of persons whom it is difficult afterwards to shake off, and with whom contact is pollution. The plunder of the State, suspected rather than known, did less harm to the new Empire perhaps than the inherent Bohemianism of its tone and manners. The Emperor himself never emancipated himself from the loose, free and easy habits of the confirmed man about town; but his position imposed on him a certain regard for appearances which was disregarded by the Fleurys and Mornys. There was a taint in the atmosphere of the Court which corrupted all who were brought within its influence, and repelled both virtue and honour. We are not speaking now so much of actual vice, but rather of that good-humoured, easy tolerance of vice, and disposition to smile at it and make light of it, which is so destructive to the moral sense. Very scandalous persons came and went at the Imperial Court, and left a bad whiff in the air. This is the society into the midst of which the great Correspondent introduces us. The *Daily Telegraph* went in strong for the Empire in those days, though it has had its little kick at the dead lion since, and it was the Correspondent's business to glorify it and sing its praises. And [illegible] be a chaises are full of historical significance. What they come to is [illegible] proves much this—that the Bonapartes knew how to keep a good [illegible] Rifray gave no end of parties, with floods of champagne [illegible] is open, and did all they could to make their guests feel [illegible] my of us. Everybody knows the sort of house in [illegible] altoge[illegible]

private life which corresponds to this, where the family antecedents are shady and will not bear looking into, and guests are baited for by lavish feasts and freedom from the restraints of rigid etiquette, with something more than a touch of fastness in the freedom. There can be no doubt that the Tuileries in the Emperor's time was a very jolly sort of house to go to, and the popularity of the Empire with a certain section of English society and with travelling Americans had its root in this free and easy hospitality. The burlesque of the *Grand Duchess of Gerolstein*, which is said to have driven the Queen of Spain from her throne, also supplied a bitter commentary on the social aspects of the Empire, which, like the Grand Duchess, had all the vulgar looseness of a common *grisette*, and every now and then kicked out its fine clothes with a sudden fling.

The Correspondent's letters begin at the end of 1864 and end in the summer of 1870. All at once we are plunged into a whirl of dancing and late suppers. We are at a ball at the Foreign Office, and the Emperor and Empress are pointed out to us under their masks and dominos. Princess Metternich gives a masked ball in Lent, the great feature of which is a party of penitents from a convent, who glide in two and two in spectral robes and hoods, and, by way of a practical joke, as it is a fasting season, the company are sent off without supper, to seek refreshment in the adjoining taverns. The Emperor and Empress are here too, but disguised so that nobody knows them. The Union and the Jockey Club give a ball at the Trois Frères, at which all the ladies are dressed as *grisettes*. M. Dupin delivers his great speech against the unbridled extravagance of women, but it has very little effect. The joke of the day is the butler coming up to tell a lady who has just taken her seat in the drawing-room that her dress is shut in the carriage-door. "You can't handicap Paris and London," we are told, "as to vice; London has been pulling for years to get well in, but Paris can still give two stone of iniquity." We go to a party in the Rue de la Victoire—"no crinoline, long dresses cut very low, and made on what is called the *tirez le cordon et parlez au concierge* model, and the hair arranged in wonderful horns; add paint and patches to taste, and you have a lady of the First Empire, as she reproduces herself in the Second." The dancing is somewhat eccentric. "I confess that a middle-aged gentleman with spectacles, turning heels over head while he is doing *cavalier seul*, his partner the while sitting on the floor and gesticulating—nay, even the *vis-à-vis*, when his turn comes, advancing like a crayfish—are novelties in the graceful art of quadrille dancing. What then? We must change sometimes." Here is a paragraph that reads strangely by the light of subsequent events:—

> Monday, Oct. 30.
>
> To-day the Prussians marched on St. Cloud and effected a lodgment. Fortunately it was only to play music to the Court. The 34th Regt. of Herr von Bismarck's Line is come to delight the musical ear of Paris, and it played last night at the Cirque de l'Impératrice. Why Prussia should favour France with "a few friends and a little music," I cannot imagine.

At a fancy ball at the Tuileries the Emperor does the honours in a mantle of white *moiré*, "apparently in the highest possible spirits," the Prince Imperial appears as Masaniello, the Empress in a gorgeous Louis XVI. costume of ruby velvet trimmed with fur, the hair raised to a vast powdered tower, profusely decorated with diamonds, and the Marquise de G—— as the Angel Gabriel with a flaming sword. At one of the Ministers' parties, the Empire, "pure and simple," was represented by a lady whose "head was like a golden glory, no waist to speak of, and as for crinoline, not a hoop, not a hair, not a spare petticoat; her clothes clung to her like—what shall I say? Well, like a tight fit." A tasteful article in jewelry is next presented to our notice—a necklace with twelve lockets hanging from it of exquisite workmanship, emblazoned with the devices of the best and oldest families in France, and containing portraits of the "well-wishers of the golden-haired daughter of dissipation," who wore the ornament. Then we have a flattering account of the appearance of Madlle. Cora Pearl as Cupid at the Bouffes. At a masked ball at the Foreign Office—every other night there seems to be a ball, masked or plain, at one of the Ministries, or the Hôtel de Ville, or the Tuileries—Cæsar is detected coming out of a private supper-room, intriguing one of his fair subjects, and then returning to the room laughing. At 4·35 A.M. there are still piles upon piles of truffles, and waiters are coming in with fresh asparagus, and this is the 3rd of March. There is a ball at the Hotel of the War Minister, where you step out of a hot and crowded ballroom into a cool and shady grot, with a cascade falling over rocks into a valley of exotic plants; and a few nights after another ball at the Ministry of Marine, flowers growing everywhere, and sailors with drawn cutlasses standing at attention in a line from the carriages to the reception-room. In the summer of 1867 the King of Prussia, with Moltke and Bismarck, pays his memorable visit to Paris, and a party of military students from St. Cyr at a dinner-party drink to their meeting next year at Berlin. Some of the invitation cards of the period are characteristic. Madame de A. receives on such a night, and *on sautera sans cérémonie*. Madame de B. gives a *bal intime*, ladies going to which must be dressed as nurses and the men as conscripts. The Correspondent is obliged to admit that very odd sort of people get admission to the State balls. At one he heard a countryman of his exclaim, "I say, this is d——d bad wine, not so good as Pinard's," which shocked him very much, "for really," he adds, "the Tuileries is the only place where the champagne is not as sweet as sugar and iced to death." At these grand festivals

gallant warriors struggle at the buffets for hot punch and coffee ices, champagne flows in rivers, and a little pheasant *au bois*, a few truffles *en serviette*, a little salad *à la paradis*, some pine-apple, a few sweet cakes, and an ice are reckoned a light supper. It is mentioned incidentally that an Imperial salad was an artistic compound of potatoes, asparagus, peas, beans, and truffles, dressed with oil, vinegar, and salad. It is pretty clear that the Emperor, who had in the first instance won over the army with champagne and sausages, baited for society in pretty much the same way. Entertainments of this kind were constantly being given, and the chief duty of the army of Paris was to serve as decorations for balls and supper parties. Life in the Cent Gardes must have been rather exhausting about this time; and what went on in the capital was repeated in various degrees throughout the country. Prefects and sub-prefects kept open house at the expense of the State, and the Empire, in short, was a grand system of wholesale treating. The gay and hospitable Prefect of Rouen who was pulled up by M. Thiers for his defalcations was only a type of the system.

This aspect of the Empire is sympathetically depicted by the Correspondent of the *Telegraph*. At the Tuileries there is open house for all comers; balls, routs, supper parties follow each other in rapid succession, and there is always something going on. Aristocracy and *cocotterie* are oddly confounded; fine Court ladies copy the dresses of the *demi-monde*, and sometimes import, as an excellent jest, the slang and manners of the original wearers. It must have been evident to many of the revellers that this Bohemian paradise could hardly last; and the closing chapters of the correspondence are full of the shadows of coming events, although the writer tries to explain them away as only passing clouds. There is street rioting in Paris, and the Correspondent, like a good Bonapartist, from the snug window of his restaurant, longs for "one good volley, and one good charge of cavalry." The general discontent is shown in the disposition to turn the shooting of Victor Noir against the Emperor, who of course had nothing whatever to do with it; in the elevation of Rochefort into the hero of the hour; and the political emphasis given to passages in Victor Hugo's play of *Lucretia Borgia*. Respect for, and confidence in, the Emperor had fallen so low that in his own palace he was mobbed by deputies, each anxious to put him up to his only chance of safety. Looking back, we can see now how the failure of the *plébiscite* and the Ollivier Ministry to restore confidence drove the Emperor into the gulf of a disastrous war. But the Correspondent breaks off before that period, and we take leave of the Emperor and Empress "supping beneath the shadow of the most gorgeous plateau ever seen—a perfect village of dead silver, representing Victory, Triumph, and Success." All that has happened since imparts a somewhat ghastly effect to this retrospect of the junketings and merrymakings of a defunct Empire, but it has an historical meaning which should not be missed.

THE PRINCIPLES OF THE REFORMATION.

WE have before now taken occasion to remark on the matter of course way in which some persons are apt to talk of "the Reformation," as if, like the Commonwealth or Catholic Emancipation or the first Reform Act, it were a definite event, occurring at a certain fixed date on which everybody could in a moment lay his finger. To any one who has the most moderate apprehension of what Germans would call "the historical sense," such language is sufficiently trying. It betrays an utter incapacity or obstinate refusal to look beyond the most superficial, and therefore misleading, aspects of the gravest phenomena of history. But, absurd as is such a method of speaking of the Reformation, there is a double absurdity in the popular fashion of appealing to "the principles of the Reformation." The Reformation is at least an historical fact, though it is a very wide and complex fact, and not to be disposed of in an oratorical flourish or made the middle term of an argument without some explanation of the meaning intended to be conveyed. But "the principles of the Reformation" is about as intelligible a phrase as the principles of Christianity, or the principles of justice, or—to take a favourite French "idea"—"the principles of '89"; indeed it is a good deal less intelligible than this last formula, which must necessarily bear a pretty definitely democratic sense, whatever further details it may be supposed to include. But just as orthodoxy was defined by Warburton to be "my doxy," the principles of the Reformation usually mean in the mouth of a Protestant, of whatever school or communion, "my principles," and in the mouth of a Roman Catholic, the "principles I abhor." What the aforesaid principles are depends in either case on the opinions held by the speaker, and can only be measured by our knowledge of his personal belief. In Ireland a Protestant means a member of the Episcopal, now the disestablished, Church; at one period of our history the term was used in political circles to designate the opponents of Catholic Emancipation; in ordinary parlance it is applied to all professing Christians of whatever creed who are neither Roman Catholics nor members of the Greek Church. And if the word Protestant is thus fatally vague, the principles of the Reformation is a formula vaguer still. Dr. Pusey and Dr. Cumming, Archbishop Laud and Prynne, Hengstenberg and Strauss, could appeal with equal sincerity, but with the most widely diverse intention, to these hardly worked "principles," which seem somehow or other to form a common bond among them all.

Thus we could not help being a little amused, though we were not at all surprised, to see "the principles of the Reformation" loudly invoked in the Church Association memorial presented last month to the Archbishops of Canterbury and York. And we were quite prepared to find the reply returned, after six weeks' incubation, by the Most Reverend prelates beginning with a solemn censure of a large body of clergy and laity who "desire to subvert the principles of the Reformation," and ending with an assurance that the bishops will not be found wanting in maintaining "the real principles of the Reformation." But will the members of the Church Association or the Archbishops kindly explain to us what those "real principles" really are? They have not done so yet, and in the absence of explanation a very wide field is left open to conjecture. For, sooth to say, we have been unable to discover, after our best endeavours, that the archiepiscopal manifesto throws any fresh light on the subject. But it would be a manifest libel on such high authorities to suppose that they used words without any definite meaning, or that they did not know what their meaning was. And we can well conceive one of the sixty thousand memorialists, if any such should deign to cast an eye on these columns, indignantly exclaiming, "Why every one, or as Lord Macaulay would say, every schoolboy, knows perfectly well, what the principles of the Reformation mean, and therefore, of course, the Archbishops and the members of the Association know what is meant." Well, it is very humiliating to confess oneself more ignorant than every schoolboy; so we will make an attempt, albeit with no very sanguine anticipations of success, to see our way out of the difficulty. Now surely if there is one principle of the Reformation acknowledged by friend and foe alike—if it be not indeed the fundamental principle—it is the right of private judgment. There are whole libraries of controversial divinity on the subject; Catholicism, it has been repeated to weariness on all sides, is based on authority, Protestantism on private judgment. And yet it is difficult to understand how this can be the principle, or one of the principles, invoked in the present instance. For the unrestricted exercise of their private judgment, in a direction unpleasing to the Association, is the very crime charged against the Ritualists who "desire to subvert the principles of the Reformation," and the Archbishops are expressly urged to put fresh restrictions on its exercise. And with that request their Graces on the whole express themselves anxious to comply, though they have cautiously added a remark about moral influence being a more suitable instrument than authority in a Protestant Church, which looks as if they felt some hesitation about the matter. At all events, it is clearly the memorialists rather than the Ritualists who are in this instance seeking to "subvert" the principle of private judgment; so it cannot be to that principle they are appealing. What is more to our present purpose—for we are not now engaged in discussing the merits of the lay memorial or the episcopal reply—it would be very hard indeed to show by any historical process of proof that private judgment is, except in a sense wholly abhorrent to the mind of Church Associations or Archbishops, a principle of the Reformation at all. It would be much nearer the truth to say that it is a principle of the Reformation to coerce private judgment; only the Reformers can hardly claim exclusive credit for a system which had long before been extensively professed and acted upon by the class of religionists whom they were, in many cases, anxious to reform off the face of the earth altogether. We are fully aware of the outcry which such a statement may call forth, nor will we pledge ourselves to the assurance that every schoolboy knows its truth. But we have asserted nothing which cannot be proved by the most abundant evidence. To abridge a mere tithe of that evidence would be far to outrun our present limits, but a few illustrations ought to suffice to shake, if not to convince, the most sceptical.

The opinions of almost all the leading Reformers, British or foreign, on the sacred duty of persecution, and their perfectly consistent practice, whenever the opportunity occurred, are notorious. Luther, it is true, was condemned by Leo X. for maintaining that heretics ought not to be burnt; but it would not perhaps be unfair to assume that he was chiefly thinking of his own followers, who were the heretics most likely to incur fire and faggot just then; and, at all events, his view of toleration, if he ever held it, underwent considerable change after the Anabaptist revolt. As to other Reforming leaders, the mere mention of Calvin, Cranmer, and Knox will at once serve to remind any reader of average information how they dealt with heretical pravity. But it may be worth while to point out that these principles have been no barren theories with the children any more than with the authors of the Reformation. We will not dwell now on the fierce religious code of the Pilgrim Fathers, or on the penal laws in Ireland. Let us keep to Great Britain and to times nearer our own. Scotland will be allowed to be a sound Protestant country, if there ever was such; Mr. Buckle says it is, or was, shockingly "priest-ridden," but still the priests were of John Knox's kind. Now in 1712 there was a Bill introduced into Parliament, and eventually passed, not for interfering with the establishment or prerogatives of the Presbyterian Church, but for relaxing somewhat the severity of the existing penal laws against members of the Episcopal communion; the "Episcopal Dissenters" were to be permitted to assemble for public worship and the celebration of sacraments without molestation. That was [illegible] the General Assembly took alarm, and in the [illegible] winded "Representation to the Queen's [illegible] herself an Episcopalian, "cannot b[illegible]

"their astonishing surprise and deep affliction to hear of such a Bill, offered for such a *large and almost boundless* toleration, not only threatening the overthrow of the Church, but giving a large license *almost to all errors and blasphemies* [*i.e.* the teaching of the Anglican Prayer-book], and throwing up all good discipline, to the dishonour of God, and the scandal and ruin of the true Christian religion, and the infallible disturbance of the quiet, and to the confusion of this Church and nation," &c. &c. Clearly the Presbyterian Church, the special depositary of the traditions of Calvin and John Knox, was by no means favourable to the principle of private judgment, unless of course it was the private judgment of orthodox Presbyterians. Let us pass from Scotland to England about half a century later, when it was first proposed to relax the penal laws against Roman Catholics. The Protestant Association of the day, with an English nobleman at its head, put out in 1779 an "Appeal to the People of England," the tenor of which may be gathered from the following extract:—

> To tolerate Popery is to be instrumental in the perdition of immortal souls and of millions that only exist in the prescience of God, and is the direct way to provoke the vengeance of a holy and jealous God against our fleets and armies. Popery is not only high treason against the King and the State, but also high treason against God.

Here again the principle of private judgment seems to be subjected to considerable restriction. And if we come down a little later, and listen to the opinions, not of Presbyterian General Assemblies, or impassioned mob orators, but of grave and learned prelates, who were privately consulted by the Government of the day about Catholic Emancipation, the result will be much the same. The Bishop of Winchester (Dr. Sumner) was indeed in favour of making some concessions, but only because he thought that in the existing state of Ireland such a course would tend to promote the interests of Protestantism. He begins his memorandum with the observation, "As a conscientious Protestant I could not make any concessions to the Roman Catholics, however they might seem to be required by political expediency, as long as I believed that such concessions would injure the Protestant *or strengthen the Roman Catholic religion*." And he goes on to explain that "*as matters now stand*, to remove the political disabilities would be the surest method of *promoting the Reformation*." His brother, the Bishop of Chester, afterwards Archbishop, was on similar grounds opposed to the proposed measure. "Its safety," he observes, "depends very much on the presumption that the Papal cause is a declining one, and will become so more and more. But such a recognition of the Roman Catholic priesthood is calculated to give them a new footing," &c. Toleration, according to both prelates, is only so far admissible as it may be expected in fact to undermine the tolerated cause. We are very far from saying, be it remembered, that these intolerant views—and we could cite abundance of similar evidence—are peculiar to Protestant authorities. We only say that the alleged testimony of every schoolboy as to private judgment being a principle, or the principle, of the Reformation must be received with much reserve.

There is, indeed, a sense in which it may be plausibly maintained, as Roman Catholic and other writers have often insisted, that private judgment is a first principle of the Reformation. The Reformation, it is argued, broke down the principle of authority, and thereby gave full scope to the most unrestricted license of belief. Voltaire was the lineal descendant of Luther; Deism, Pantheism, Darwinism, and all the other advanced theological "isms" of the day are the natural varieties of Protestantism, and the common spawn of the Reformation. There is a good deal of force in the argument. The protest of Luther and his allies did certainly give a shock to the idea of authority such as it had not felt for centuries; it was not surprising that men who had broken loose from the great international Church which had hitherto dominated Europe should find their disciples breaking off, in course of time, from the lesser local communities substituted in its place, and innovating further on the doctrinal novelties which they had been bidden to accept. So far our modern "isms" may fairly be considered the natural outbirth of the Reformation; only it must be borne in mind that the parentage is a wholly unconscious one. The Reformers, one and all, would have cursed their spiritual progeny, had they ever heard of it, as heartily as ever the Pope cursed Luther. And when we remember the anathema pronounced not many years ago from the platform of Exeter Hall on a recent work of doubtful orthodoxy, as the vilest poison ever "vomited from the jaws of hell," we need not doubt that here the Church Association would quite agree with the Reformers. In the only sense in which private judgment can be called a principle of the Reformation, it is a principle which they too execrate.

This point has detained us so long that we can but touch very cursorily on one or two other possible interpretations of the principles supposed to be at stake. It is highly probable that, in talking of principles, the memorialists and the Archbishops were thinking of doctrines; and about the doctrines of the Reformation many people who are even better informed than our ideal schoolboy will at once exclaim that there can be no mistake. At the risk of being considered captious or paradoxical, we are obliged to interpose with an inquiry as to what are the doctrines of the Reformation? One such doctrine, and one only, is prominently [illegible] two Archbishops. The head and front of the [illegible] appears to be their encouragement of [illegible] altogether. Far be it from us to meddle with so [illegible] the less called upon to pronounce [illegible] disagree. All we could gather from the debate the other day in the Upper House of Convocation on the subject was that one bishop thought confession an excellent thing for young gentlemen but very dangerous for young ladies, while another bishop appeared to think it might be useful to both sexes, and several more that it ought to be summarily abolished; and since then all sorts of writers have been starting all sorts of views about it in the *Guardian*. Such matters are too high for us. But, without pronouncing any opinion on the merits or demerits of the confessional, whether Anglican or Roman, we may be permitted to observe that its rejection cannot with historical accuracy be described as a doctrine of the Reformation. If the Reformation generally be intended, Luther retained the ordinance, and it survived, we believe, for many generations in theory, if not in practice, in the Lutheran Church. If the English Reformation be intended, no syllable of condemnation of this "Romish doctrine" is to be found in the Thirty-nine Articles, and the old form of absolution was retained in the Prayer-book. We are still therefore no nearer to a discovery of the doctrines of the Reformation.

The fact we take to be pretty much this, though we must content ourselves here with stating it. There was scarcely a point on which the Reformers were sufficiently agreed for it to be entitled a "principle of the Reformation," except of course what their position inevitably involved, the principle of resisting Rome; and there was scarcely a single doctrine which, for the same reason, can be correctly designated a doctrine of the Reformation, except one. There is, if we mistake not, an almost universal *consensus* among the leading Reformers, British and Foreign, and a highly respectable *catena* of standard Anglican divines from the Reformation downwards, to avouch the doctrine that the Pope is Antichrist. There are obvious considerations of controversial and practical convenience to account for this, but we are just now simply concerned with the fact. That the Pope is Antichrist may not unreasonably be called a doctrine, or even the doctrine, of the Reformation, and we much doubt if any second doctrine can lay claim to such high authority. That it is still widely held among members of the Church Association is also not improbable, but neither the memorialists nor the Archbishops have once alluded to it, nor was it greatly to their purpose to do so. On the one hand, the doctrine has no place in the Thirty-nine Articles; and, on the other hand, whatever be the sins of the Ritualists, an excessive deference for papal authority is generally believed to be precisely the "Romish error" which they are least eager to adopt. Indeed Dr. Cumming has of late years stood almost alone in vindicating this very genuine principle of the Reformation, which is fast growing obsolete among educated men. Yet when once we get beyond it, we search vainly for some detail of doctrine or ritual on which the Reformers were not divided, except it be the duty of repressing error by the secular arm. And we suspect that a good many of those who in this day appeal most confidently to the principles of the Reformation would have been treated by the Reformers as Calvin treated Servetus. It is no new thing, after all, for the sepulchres of the prophets to be built by the sons of those who slew them.

REPORT OF THE ENDOWED SCHOOLS COMMITTEE.

THE Select Committee of the House of Commons on the operation of the Endowed Schools Act has made its report, and printed its minutes, but the evidence, which promises to make a more than usually amusing blue-book, is still to follow. The upshot of the document tends to confirm the general feeling of impartial bystanders that, however much our Endowed Schools may have wanted reform, and whatever may have been the real nature of the Dissenters' grievance which had undoubtedly much to do with the movement, and which had not yet grown under Mr. Miall's, Mr. Osborn Morgan's, and Mr. Dixon's nursing into being in itself everybody else's grievance, still the Act in itself, and as explained by its incidents, was a grave blunder. It was a measure of the widest powers, served up by its promoters with the sweet sauce of minimizing explanations, before such a miscellaneous assemblage of guests as the first Session of a first Parliament after a drastic Reform Bill was likely to bring together. It was accordingly passed amid what an Irishman would call a universal chorus of harmonious misunderstanding. The smaller knot of doctrinaire school reformers appreciated the arbitrary powers which its clauses conferred on the future Commissioners, and wisely held their tongues upon details. The larger body of quiet people who thought a great deal more about Mr. Forster's assurances than about the interpretation of a long Act of Parliament, comforted themselves with the belief that those powers were only intended for the bad schools, and that when one was found to do its work satisfactorily, it would be merely cleaned up and mended, and not pulled down to be constructed afresh. They were somewhat startled when a list of Commissioners and Secretary appeared, all belonging to one political party, and when they remembered what some of those gentlemen had said: still Lord Lyttelton's was a name which carried with it assurances of judicial impartiality, and they did not cease to hope for the best. Which section proved the better prophet may be gathered from the draft of the Report which Mr. Forster has laid on the table of the House of Commons, and followed up by the Bill which he brought in upon Thursday night. The Committee sat upon an Act passed by the Government still in office, and the Minister who

passed it was in the chair, while its composition according to Parliamentary precedent, showed a majority of one for the Ministerial majority of the House of Commons itself. So, if the Government had had a good case, and if the measure under review had secured general confidence, a Report would have undoubtedly appeared, blessing them and their Act and their Commissioners altogether, by however small a majority. What happened was that Mr. Forster proposed a Report of that character, and that two members of the minority prepared their Reports, couched in very different terms, and that, although the Chairman's draft was adopted, yet in its progress it suffered sufficient change to give it a colouring far from comforting to the out-and-out partisans of the Endowed Schools Commissioners. The divisions were naturally numerous and close, and sometimes the friends of the Commission and sometimes their critics gained the advantage, but on the sum total a remarkable document has come to the birth.

The Commissioners are tersely summed up in the first paragraph:—

> After careful consideration of this evidence, your Committee recommend that the powers of making and approving schemes, which, by the last section of the Act, expire at the end of this year, shall be continued, with some important modifications. The published opinions of some of the Commissioners on the subject of endowments have caused alarm, and have, in some cases, seriously impeded the harmonious action which might otherwise have been secured between them and the Governing Bodies of the Charities with which they have to deal. Their own experience, as they state, in attempting to work the Act, has convinced them that the country was hardly prepared for its reception; and it is to be regretted that some of the changes proposed by them, especially in the cases of certain good schools, should have been such as to hinder the hearty co-operation of those who had heretofore worked to render them efficient.

It was only to be expected that the blows thus given were salved by the after-acknowledgment that "much sound and good work" has "been done," "many schools received new life," and so forth. Every one knows that it was almost physically impossible for any Commission on all the Endowed Schools of the country not to do some—and even extensive—good by a general course of remodelling, exercised over a wide area of subjects. The remarkable thing is that the Minister who evoked Bill and Commission should be driven to make himself the mouthpiece of a judgment so decisive on the words and deeds of his own nominees, concluding with the promise of "more clearly defined powers," or, in plain language, that their wings are for the future to be clipped. This part of the Report, at all events, shows that those sections of society who were alarmed or alienated by the policy of the Commissioners were neither fanatics, reactionaries, nor abettors of proved corruption. The Committee goes on to propose certain modifications in the working details of the Bill, involving powers to the Commissioners or the Educational Department of amending schemes on the representation of interested persons, which, strange to say, found no place in the Act. At the same time, the period during which any scheme is to be before Parliament is enlarged from forty days to two months, "and that such period shall be within the same Session." It is also recommended that no scheme should be laid before Parliament unless a petition should have been laid before the department to that effect from the governing body, the municipal corporation, or twenty ratepayers. A proposal to secure the attention of Parliament, by throwing upon the executive the responsibility of moving the schemes, was lost by the Chairman's casting vote.

The Report continues to recommend an extension of the 3rd sub-section of the 8th section of the Act, which "excludes from the Act all endowed schools, not being grammar schools, in receipt of the Parliamentary Grant for Elementary Education," and in compliance with the 75th section of the Elementary Education Act of 1870, which "provides that schemes may be made by the Education Department for such schools, on the initiative of their Governing Bodies"—

> That the same procedure shall be applied to all elementary endowments, not being grammar schools, of which the annual income does not exceed £——. And your Committee would further recommend that the Education Department should undertake the inspection of such schools, though not in receipt of any Parliamentary Grant, and that power should at once be given to the Governing Bodies to charge such fees as may be approved by the Education Department.

The Committee further recommends that

> the words of Sect. 11 of the Act should, in any amending measure, be understood to provide that, in any scheme relating to any endowment, due regard shall be paid to the educational interests of persons of the same class in life as that of the persons who, at the commencement of the Endowed Schools Act, 1869, were benefited thereby.

And that

> The Commissioners should be enabled to retain an ecclesiastical officer as *ex officio* Governor, if such an appointment is directed by the original instrument of foundation.

The Committee then reaches the knotty question of the preservation of Denominational education in schools which were clearly set up by their founders or legislators with a specific religious character which has continued unrepealed and in practice. The 19th section of the Act was at the time presumed to meet the equity of the case, and no doubt it has done so in the opinion of the more advanced schools; but interpreted as its terms were by the legal authorities on whom the Commission relied, it has been considered by the persons most directly affected to have failed in that which they at all events supposed it to have meant.

No candid critic can now say that this powerful class has not a justification for its complaint after the Committee has proposed to amend the section by the insertion of the words—

> "Any educational endowment originally given to charitable uses since the passing of the Act 1 Will. & Mary, c. 18, commonly called the Toleration Act, if by the express terms of the original instrument of foundation or of the statutes or regulations made by the founder, or under his authority, in his lifetime, or within 50 years after his death (which terms have been observed down to the commencement of the Act), it is required that the majority of the Governing Body, or the majority of the persons electing the Governing Body of such endowment, or that the principal teacher employed in the school, or the scholars educated by the endowment, shall be members of a particular church, sect, or denomination."

Other amendments more strongly embodying the grievance felt in the working of this clause had been lost by the Chairman's casting vote, after which Mr. Forster himself moved the words which we have quoted, and then the Committee rejected further amendments framed in a more decidedly Denominational spirit. We are not concerned with these, except to observe that we think Sir Michael Hicks Beach had something to say for himself in his motion to omit the limitation of the Toleration Act. It may be said that before that Act no man would have endowed a school on any other terms except conformity with the Established Church. But, on the other hand, no one would have endowed a school at all except with the desire that the doctrines of that Church should flourish. The money of Nonconformists, we make no doubt, went to institutions now represented by the flourishing colleges of which the Dissenters are so justly proud, while the funds poured by Roman Catholics into Douay and St. Omer have been repaid with interest by the State in the shape of Maynooth. No one can doubt the equity of further mitigation of the 19th section contained in the following provision:—

> The attention of your Committee has been drawn to the incidence of Sect. 25 upon cases in which, while the terms of the original Foundation fail to bring the endowment within Sect. 19 of the Act, recent endowments of at least equal value in the form of buildings or other property, have been added, in the belief that the endowment was attached to a particular denomination. In these cases your Committee think that the scheme should provide for the continuance of the religious instruction of the scholars belonging to such denomination.

The Report, after further regulating the jurisdiction of the Charity Commissioners, and defining that appeals under Section 39 should be to a purely legal tribunal, hits another blot in the recommendation that

> By the schemes of the Commissioners powers are given to Governing Bodies to alter from time to time, as they think fit, the religious instruction. It appears undesirable and unfair to the scholars and their parents that the character of it should be changed without full and ample notice: and your Committee recommend that after it shall have been once laid down by the Governing Body, no change, in substance, shall be made without a year's notice.

The Committee declined to commit itself to the wish that the House should take up the dropped portion of the Bill of 1869 touching inspection, examination, and a Central Council, and wound up its report with the recommendation to continue the powers of the Commissioners for three years, with power to the Privy Council to add one or two more. We regret and are surprised to see that a paragraph moved by Mr. Powell—that

> "It is inexpedient that members of Governing Bodies of grammar schools, or schools of equivalent rank, more devoted to modern science or technical instruction, be chosen by direct vote of the ratepayers; and where any members are so elected the principle of cumulative voting ought to be adopted, as in the case of school boards"—

should have been lost by the Chairman's casting vote on a strictly party division, which mustered Mr. Forster, Sir T. Acland, Mr. Kay Shuttleworth, Dr. Lyon Playfair, and Mr. Trevelyan among the Noes. Another division, which swept two of the Opposition into the Government ranks, rejected a recommendation moved by Mr. Welby, to refer to a Select Committee next year the question which has really created the fundamental difference between the Act of 1869 and the scheme of the previous Inquiry Commission—namely, the desirability of local Boards to bring specific knowledge of facts to bear upon the rigorous action of abstract theory.

The Bill which Mr. Forster has brought in in consequence of this Report will of course be the *reflex* of its recommendations. Whatever may be the changes to which it may be subjected during its progress through the two Houses, we may be certain that they will not be in the direction of letting the Commission off on more easy terms than those to which they find themselves subjected by a Committee of the House of Commons, appointed on the motion of their own nominator.

THE NAVAL REVIEW.

IT is satisfactory to know that we have at least got a fleet which is capable of being looked at by a foreign visitor on a fine day at the anchorage of Spithead. Perhaps, one might say the newest, and in design the most powerful, of our ships were hardly be discernible by an unpractised eye. The great [illegible] the naval review seems to have been, as it used to [illegible] The five-masted ironclads are superior to older ships [illegible] for this kind of decoration, but the flag that [illegible] years the battle and the breeze must have [illegible] formidable difficulty in displaying itself [illegible] ship. Beauty is a conventional [illegible]

been so far educated that reporters of the naval review are able to find "picturesqueness" in the *Agincourt* and *Northumberland*, although they are eloquently silent as regards the personal appearance of the *Devastation*. The Shah cannot have any preconceived ideas as to naval architecture, and therefore he may have been able to judge the fleet at Spithead on the principle of handsome is that handsome does. He could at least appreciate the strength of the sides and power of the guns of the ships which he visited, and he would probably think that capability for attack and defence is more important in a war-ship than a talent for looking pretty on a holiday. Yet, although the guest may have been content with what he saw, the hosts inevitably measure the present by the past. The turret-ships have not even yards that can be manned, and they are about as useless at a review as a gentleman of eminent scientific or literary attainments who cannot dance is at a ball. If only we could be quite sure that the turret-ships would under all circumstances be useful, we should not so much mind confessing that they are not ornamental. There was a saying of a famous man that he could not fiddle, but could make of a small city a great nation, and it pleases many Englishmen to say, or rather to think, something like this of themselves. But if we despise amenities, and take our stand on practical utility, it would be satisfactory to feel sure that our turret-ships can not only fight but swim. An "old woman's cruise" between Portsmouth and the Isle of Wight, however agreeable to the feelings of landsmen, is not much of a test of the sea-going qualities of a fleet.

We have still a wooden fleet which can fire salutes and dress itself in bunting, and the ships which first welcomed the Shah bear names which will be remembered even when every timber of those ships has perished. The *Asia* is a two-decked ship pierced for eighty-four guns. She carried the flag of Admiral Codrington when that "untoward event" the battle of Navarino was brought off. Being chosen for flagship in the Mediterranean, we may presume that she was considered a fine specimen of her class in the year 1827, when a combined fleet of English, French, and Russian ships did their best to destroy that Turkish navy which in later years England has done her best to re-establish. The history of this battle of Navarino is not altogether encouraging to naval officers. Admiral Codrington and his men did what they considered to be a good day's work. A report went home to the Duke of Clarence, who was at that time Lord High Admiral, and he being only a plain sailor, was vastly pleased with what he read, and he went immediately to King George IV., told him that Admiral Codrington had behaved like a Trafalgar captain as he was, and his crew had behaved like British seamen, and obtained from His Majesty promotions and decorations and sent them off to the Mediterranean squadron without delay. But then the politicians took the matter up; a change of Ministry occurred, and after considerable discussion it was concluded that the King in his speech to Parliament should describe the battle of Navarino as an "untoward event." Shortly afterwards a pretext was found for recalling Sir Edward Codrington from his command. However, it was generally felt that he had been badly treated; and naval officers may at least draw from his case the inference that the country, although it may be temporarily misled for party purposes, will in the long run do them justice. Thus the *Asia* is a relic of a time when England and Russia fought together against Turkey. The *Duke of Wellington*, a much younger ship, will be best remembered as having carried the flag of Sir Charles Napier when England and Turkey fought together against Russia. This ship was one of the finest specimens of the class of screw three-deckers, and she exemplifies a style of shipbuilding which was superseded at the moment when it seemed to have attained perfection. The *Donegal* is an equally fine specimen of the class of screw two-deckers, and she, like the *Duke of Wellington*, became useless, except for ornamental purposes, while still a new and splendid ship. She inherits her name from one of the numerous prizes of the French war. The original *Donegal* was called while Frenchmen owned her *Hoche*. She carried the pendant of a squadron destined to land troops in Ireland in 1798, and she was captured in the Bay of Donegal by Sir John Warren. She did good service to her captors under her new name, and when she was worn out that name was given to a new ship, in order to remind Englishmen that their fathers contended successfully against Irish rebellion, backed by French hostility. The other ships which first saluted the Shah were the *St. Vincent*, a sailing three-decker, whose name commemorates at once a skilful seaman and his principal exploit, and the *Victory*. It may not perhaps be unseasonable to quote from a book lately published a new version of a familiar story. Sir Edward Codrington, as we have said, was a Trafalgar captain, and, being married, he of course wrote to his wife an account of what he saw and what he did at sea:—

> I suppose no man ever before saw such a sight so clearly as I did, or rather as we did, for I called all my lieutenants up to see it. After passing [illegible] *Santa Anna* dismasted, and her opponent the *Royal Sovereign* little better, [illegible] larboard side, besides three of our ships and some of those of the [illegible] we lumped together on our starboard bow, we passed close to the [illegible] Rit*exptable* (French), *Timtraire*, and *Bucentaure* (French), all [illegible] each other, each firing her broadside and boarding the [illegible] is open. In this situation the two French ships were soon [illegible] way of [illegible] the only ship thereabout not firing, we were the [illegible] altogether a distinct uninterrupted view of that grand [illegible]ion nine days after the battle

which he describes. His account of the bad weather which followed the battle is even more impressive. He was, with his disabled ship, in charge of still more disabled prizes, which he was endeavouring to save, while it was difficult enough to save his own ship in the tremendous gales. For a succession of days they had seen neither sun nor moon nor stars, when suddenly a small break in the sky revealed a few stars, heralding that partial shift of wind which just enabled the *Orion* to creep out from the near danger of the lee shore. Those stars were Orion's belt.

So much for the navy of the past. The navy of the present continues the salute with monster guns, protected by massive walls of iron. The *Royal Sovereign*, one of the earliest turret-ships, bears a name which was made illustrious at Trafalgar. She could alone have destroyed the allied fleet in that battle, and perhaps she could have saved herself in the bad weather which followed it, and perhaps she could not. Anyhow we would rather fight in her than cruise in her. The *Glatton* embodies one great improvement in naval warfare, and she preserves the memory of another. The original *Glatton* had been an East Indiaman; she was bought into the Royal Navy, and was, we believe, the first ship armed to any considerable extent with carronades, which at the outbreak of hostilities with France were a new and valuable invention. The carronade was a short gun of large bore, which threw a heavier shot than the long gun, without being itself so heavy. It was of course only useful at close quarters, and the *Glatton*, being a small ship of modest demeanour, tempted a squadron of French frigates to come within her range, and mauled them terribly before they could get away. It will be well if the new *Glatton* answers the expectations of her designers equally well. The difficulty of modern shipbuilders lies in the attempt to combine qualities which are almost incompatible. A reporter eloquently says that the "harbour ironclads" at Spithead are about the ugliest things that were ever built, but also the most to be dreaded. Although ill favoured, they are the most satisfactory sight that can be seen at Spithead, because they are thoroughly fitted for the work they have to do. The problem of building sea-going men-of-war still presents great difficulties, but it has for some time been manifest that we could not do wrong in building turret-ships for coast defence. The progress of the rival arts of shipbuilding and gun-making is, indeed, inconveniently fast. Already the *Vanguard*, which is named after Nelson's flag-ship at the Nile, has fallen into the rear. The *Agincourt* may in a few years be as completely superseded as the armour of the soldiers who fought with King Henry V. on St. Crispin's day, and for nearly the same reason. When once it appears that armour cannot keep out shot, the progress is likely to be short towards abolishing armour altogether. At present, however, we are endeavouring to make our armour stronger, and the *Devastation* represents the furthest point in this direction that has been attained. It is said that a ship which was built for the Prussians could sink any ship in the world except the *Devastation*, which could sink her. Among the strongest of the broadside ironclads is one which we have called the *Sultan*, as a partial atonement to the Turks for the "untoward event" of Navarino. Among the weakest is the *Zealous*, a wooden ship, iron-plated, whose name recalls a characteristic incident. Just before the battle of the Nile, Nelson hailed Captain Hood of the original *Zealous*, and asked him whether he thought there was water to pass inside the French line. "I don't know, sir," was the answer, "but with your permission I'll stand in and try." The combined skill and daring of captains like Hood enabled admirals like Nelson to perform what a few years before would have been deemed impossibilities. After all, when we have done our utmost in ships and guns, we must come back to the only sure ground of trust, which is the quality of our men. We are spending money liberally, and, speaking generally, it is spent judiciously. We are obliged to keep abreast of the world, or, if possible, rather before it, even in a line of progress which may not be distinct improvement. We are sure at any rate to do right in increasing the number and power of our guns and the speed of our ships, and in giving the best possible training to our seamen. The more we study our naval history, the more clearly we shall see that victories have been chiefly due to the skill gained by constant practice upon the sea. So much is certain; and for the rest we must trust our country's fortune, remembering that in her darkest hours the clouds have broken and the stars have shone.

ZANZIBAR AND BLOOMSBURY.

AMONG the Parliamentary papers of the week we have come across one which seems to us to deserve notice, not only on its own account, but as a remarkable illustration of the strange confusion of mind under which the Government seems to labour in regard to questions of economical administration. A familiar proverb warns us that parsimony and wastefulness may be found together, and we have here a striking instance of the combination. On the one hand we have the Zanzibar Mail contract, upon which the Chancellor of the Exchequer insists upon throwing away 11,000*l.* a year in order to get himself or some of his subordinates out of a foolish scrape. On the other, we have the answer of the Treasury to a recommendation of the Trustees of the British Museum. It appears that an application has lately been made to the Trustees by the different classes of officials in the Museum for an increase of salaries. Everybody is painfully aware that of late

thought that she attempted it some years too late, it is pleasant to record that she achieved a complete success, and that her third Leonora—and last, unless she takes it into her head to impersonate the Leonora of Paer—is in every respect worthy her first and second. No three parts could be more unlike each other than the Leonora of *Fidelio*, the Leonora of *Il Trovatore*, and the Leonora of *La Favorita*; and the mere fact that Madlle. Tietjens supports the three with equal power and equal dramatic expression would be a proof, if proof were wanting, not only of her cultivated talent, but of her genius as a lyric artist. Madlle. Christine Nilsson has given us nothing new. She has played Marguerite, in *Faust*, Violetta, in the *Traviata*, Lucia de Lammermoor, and Mignon, in the well-known opera of Ambroise Thomas. She has played all these before, and there is really not a word to add to what has already been written about them. Her Mignon, a refined and exquisite performance, was the most welcome because the least familiar. In Lucia Madlle. Nilsson is surpassed both by Madlle. di Murska and Madame Patti; in Marguerite she has known formidable rivals (Patti and Lucca for example); in Violetta also; but in Mignon, up to the present time, she has met—here at least—with no competitor. At the same time it would be agreeable to hear her, if only for once, in something new. People are well nigh tired of the Margueritas, Lucias, Violettas, &c., and would gladly welcome a change, even for some inferior opera, if only the heroine were suited to the musical voice and charming personality of Madlle. Nilsson.

Madlle. Ilma di Murska, who in her peculiar way stands alone, has been allowed very few opportunities of distinction this year. She was announced to play Dinorah; but the announcement, like the scene of the "shadow," turned out to be mere moonshine—and yet no amateur can refuse to admit that the Dinorah of Madlle. di Murska more nearly approaches the poetic creation of Meyerbeer than any other Dinorah we have seen. Signor Campanini, the new tenor, regarded with such curiosity last season, as the veritable Italian bold enough to undertake the part of the hero in Wagner's *Lohengrin*, when that famous work was produced at Bologna, has maintained his position, and ranks with Madame Trebelli-Bettini among the most valuable members of the company.

KING JOHN AT THE QUEEN'S THEATRE.

THE revival of *King John* at the Queen's Theatre belongs to that class of enterprises which deserve rather than command success. The lady who performs Constance is a beginner, and needs a little experience before she can be expected to do her best; and in this point of view we may regard the performances of the present week as mere rehearsals which may be followed by something better when the public has leisure to attend to it. Whether it was worth while to bring together a company of veterans for the sake of a recruit may be doubtful, but it certainly was worth while to do this for the sake of the veterans themselves. If the end does not justify the means, still the means go far to justify the end. It is no reproach, nor ought it to be a disappointment, to the lady who has undertaken the part of Constance, that her success is less manifest and indisputable than that of Mr. Creswick in King John, or of Mr. G. Rignold in Faulconbridge, or of Mr. Ryder in Hubert. It is a long time since three parts in the same play of Shakspeare have been so well performed as these, which happen to be specially suitable to the actors who undertake them. A considerable approach is thus made towards that completeness of representation which has been of late years so much desired and so little hoped for on the English stage. We could wish that this laudable experiment were more promising than at the height of summer and of the London season it appears to be. But at any rate there is the play, and the loss will be to the public if they do not go to see it. At this moment we are all busy in exhibiting the England of the present to a foreign guest, and we have therefore little leisure to contemplate the England of the past. Yet the picture which this play offers of what England was, may, if we choose to look at it, please us equally with any picture that can be painted even by laudatory newspapers of what England is. The qualities which make nations great were largely possessed by the barons whom Shakespeare imagined under Elizabeth and ascribed to the reign of John. The contemporaries of Shakspeare, the knightly adventurers who robbed Spain of her ill-got wealth, and avenged the wrongs of the native Americans on their oppressors, were of the same type as Faulconbridge, "lord of his presence and no land beside." The bluff good-humour, the "large composition," the valour and fidelity of Faulconbridge, make up a character which Englishmen still delight to think is national. The Bastard's vindication of his mother's fault still commands a certain sympathy. In spite of philosophers, moralists, and other intellectual people, it is to be feared that bodily strength and beauty are still the most popular of all qualities. It is not the gallery alone that applauds the sentiment of Faulconbridge:—

> Needs must you lay your heart at his dispose—
> Subjected tribute to commanding love—
> Against whose fury and unmatched force
> The aweless lion could not wage the fight,
> Nor keep his princely heart from Richard's hand.
> He that perforce robs lions of their hearts
> May easily win a woman's.

The gallant bearer of the English lions under the bar sinister is a true-born Englishman, and it would be difficult to find upon the stage a better representative of the Bastard than Mr. G. Rignold, whose well-earned popularity at the Queen's Theatre will be largely increased by this performance. The part of Hubert is admirably suited to Mr. Ryder, and indeed this has become by general consent his part. It would be difficult to speak too highly of the scenes between Mr. Creswick as the King and Mr Ryder as Hubert, and a clever performance of the part of the little Prince Arthur adds much to the interest which his sad fate necessarily excites. There are few more impressive passages of dramatic poetry than those in which the King first hints to Hubert to murder the Prince, and then reproaches him for acting, as he thinks he has, upon the hint:—

> I faintly broke with thee of Arthur's death;
> And thou, to be endeared to a king,
> Made it no conscience to destroy a prince.

It would be difficult, again, to surpass the scene where the English nobles find the fair boy who is their rightful king lying dead beneath the walls of the castle from which he endeavoured to escape. The first feeling is sorrow for the dead, and the next is rage against his supposed murderer. The intervention of the Bastard between Lord Salisbury and Hubert exalts the idea already formed of the personal prowess of King Richard's son, and then the nobles depart, and Hubert bears off the dead prince in his arms, while the Bastard speaks the beautiful lines beginning

> How easy dost thou take all England up!

The last act is necessarily abridged, and some of the omitted lines are among the finest of the play. The Bastard's exhortation to the King to make no treaty with an invader is perhaps unsuitable to an age which is governed by a Ministry of three courses. But the Bastard's delight when he hears that the invader will make no treaty is heartily relished by the gallery:—

> By all the blood that ever fury breathed,
> The youth says well.

The Pope long ago invented the plan of international arbitration, but in spite of the exhortations of his legates, the English were generally of the Bastard's way of thinking, and preferred to settle their differences with the French by the Bastard's method. With an enemy encamped quietly on English soil,

> Mocking the air with colours idly spread,

the Bastard could see only one course open to an English king. His unswerving loyalty to that King becomes more conspicuous in disaster. The King's fortune and his health fail together. He is brought to Swinstead Abbey, and his son Prince Henry sees that the end is near. The pathetic lines which Shakspeare has given to the Prince are mostly omitted, either to save time or to avoid overtasking the performer. The King is brought on a couch into the orchard, and utters his complaint—

> Poisoned,—ill fare—dead, forsook, cast off.

The Bastard enters at the conclusion of the speech, as if in answer to this affecting appeal for help and sympathy. Then the King dies, and the Bastard exclaims that his soul shall soon wait on his master in heaven,

> As it on earth hath been thy servant still.

The repentant nobles vow allegiance to Prince Henry, and the curtain falls as the Bastard speaks the familiar lines—

> Nought shall make us rue,
> If England to itself do rest but true.

It is not good manners to keep a lady waiting, but in order to exhibit the wonderful wealth of poetry in this play, we have dwelt first upon the scenes of it in which only men appear. But it is emphatically a woman's play, for as long as Constance is in the eye or mind of the audience, every other character is subordinate to that of the widowed mother of Prince Arthur. The debate between the Kings of France and England is well sustained, and we must particularly commend Mr. Creswick's dignity of demeanour as King of England in these early scenes. But it is quite true, as Constance says, this is her throne and kings must bow to it. From the moment that she first speaks—

> Oh take his mother's thanks, a widow's thanks—

until her last despairing lamentation for her lost son—

> My widow-comfort and my sorrow's cure—

she is the sovereign of all hearts. It is probably a true instinct of managers that causes them to bring down the curtain immediately after Constance has spoken her final words. The marriage between Lewis of France and the Princess Blanche has been immediately followed by separation, and he feels as a young man might under such circumstances. He thinks that nobody was ever so miserable as himself; and although Shakespeare has allotted the supremacy of grief to Constance, yet out of his illimitable treasury of language he has provided Lewis with exquisitely beautiful and appropriate words to express his sorrow. We all know the lines which many of us may in some moods have thought the most pathetic of all complaints that have been uttered by disappointed love:—

> Life is as tedious as a twice-told tale,
> Vexing the dull ear of a drowsy man.

But at this moment our sympathy is so absorbed [illegible] that we have none to spare for Lewis, and perh[illegible] pression that we have about him is that h[illegible] who might be useful at tea parties, and

pick up the head-gear of Constance when she tears it off and throws it on the ground. We shall do no injustice to Miss Clive, who has undertaken the part of Constance, if we say that her success in it is less manifest than that of the three actors whom we have named in their respective parts. She has been well trained, and she acts carefully and intelligently, and when she feels confident, as she may safely do, that she is not likely to make mistakes, she will do well to endeavour to forget herself in her part more completely than she now does. To use a vulgar expression, she wants to "let out" rather more; not, of course, to rant, but to leave her arms and hands to take care of themselves, and to think only of the son who is taken from her and carried to a prison which is likely to be his tomb. An actress of good physical gifts and careful training, who could act Constance in the natural way that is ascribed to the elder Kean in Othello, would easily make herself the mistress of all hearts as Shakspeare intended that she should be. We must not be understood to speak in depreciation or discouragement of Miss Clive's efforts. She had at any rate a reputation good enough to induce the assembling around her of a company which plays Shakspeare with more complete success than has been accomplished in recent years. Sometimes she was very good indeed. The lines—

> I am not mad—I would to heaven I were!
> For then 'tis like I should forget myself;
> O, if I could, what grief should I forget—

were spoken with an earnest feeling that could hardly fail to be contagious. In other passages the audience paid her the highest compliment of anxiously suppressing a disposition to interrupt by applauding. In other passages again she seemed to be thinking of the lessons she had received, instead of abandoning herself to the impulses of a passion which should shake the world.

It is probably too much to expect that this most national of all plays should receive support from the wealth and rank that are now congregated in London. There are Italian and French and American actresses to be patronized, besides answering the transcendent claims of the stars of opera, and therefore of course a mere aspirant to the honours of indigenous drama must remain unnoticed. It is Miss Clive's own fault perhaps for appearing at this inconvenient time. Mr. Gladstone set an example of attending a performance of *King John*, which we fear has not been generally imitated in the upper circles of society. However, if there are any persons in London who care to see Shakspeare acted, they had better go to the Queen's Theatre. Taken as a whole, the performance there is as good as in the present condition of the stage is likely to be seen.

THE OXFORD AND CAMBRIDGE MATCH.

At one time the University match bade fair to end as it did three years ago, when a victory that seemed already won was wrested from Oxford in the very last moment in a scene of excitement which will never be forgotten by those who witnessed it. Three men had to go in to get two runs; and Mr. Cobden sent them back with three successive balls. This year three men were left to go in to get one run; and, curiously enough, Mr. Butler, as in 1870, was the first of the three. There the parallel ends; for this year, instead of falling to the first ball, Mr. Butler hit it and won the match. A second termination to the University match, such as happened in 1870, would have been infinitely more wonderful than a double dead heat in racing; yet the supporters of Oxford must have felt their hearts in their mouths last Tuesday, when Mr. Butler went in to make the winning run.

Apart from this remarkable coincidence, the match was distinguished this year by its surprises and by its constant contradiction of preconceived ideas and established precedents. First of all, public form was utterly upset; for, according to public form, Oxford, which has won every match of importance this season, ought to have found an easy victim in Cambridge, which has not been successful once. We are no great believers, for our own part, in public form at cricket. The chances of racing are often talked about; but racing, as compared with cricket, is a downright certainty. There are so many contingencies by which an innings may be brought to a premature end, or prolonged almost indefinitely, and by which a bowler may get rid of his opponents with ease or be baulked of his prey, that they defy calculation. Yet, year after year we find good judges attempting to make exact calculations of the chances of the respective sides, and grumbling and complaining in no measured terms if they are not duly fulfilled. If there is one truth more than another which long observation must have impressed on the minds of old cricketers, it is, we should have thought, that which is expressed in the maxim—never lay odds on a cricket-match. Yet, in the face of many warnings, partly from enthusiasm, partly from an involuntary adherence to the bugbear of public form, men continue to lay odds, and suffer accordingly. It is hardly credible that as much as five to two and three to one was laid on Oxford before the match commenced last Monday, solely because, as we have said, Oxford had got so far through the season without a defeat, and her two bowlers—there is no human being less to be depended on than a cricket bowler—had scattered the wickets of the Marylebone Club, Mr. Yardley's among them, only a week ago. And, London is open to odds, if Mr. Yardley could not play the Oxford Eleven will not be able to make [illegible] way of getting a heart, and laid yet a point more. As altogether

we are already digressing, we may go on to make a remark or two on the general question of betting. We are sorry to say that there appears to be a very large and increasing amount of betting on the University match; in fact, as much money changes hands over it as over the boat-race. It is a great pity that it should be so, but there is no getting rid of the unpleasant fact. Men will back their opinions with their money; and when there is a certainty of a fair contest, of the absence of all those disgraceful intrigues and chicaneries without which, it appears, modern racing could not exist, there is, of course, an additional inducement to speculate. Then no invitations are held out, as in racing, to take half-a-crown and return five pounds. At present happily there are no professional cricket prophets, tipsters, or commission agents. Equal meets equal in fair field, and offers or takes the odds at his pleasure. Much also of the betting that takes place is nominal. A winner over the University match cannot reckon on paying in a sum of money to his banker's account within a few days. There is a tacit understanding that these sorts of obligations are settled when convenient. Perhaps this partly accounts for the extreme liberality of prices. In the morning of hope the layers of odds offer them like wealthy men who care not what they give; in the evening of disappointment the prudent takers discover that the fruits of their forethought cannot be garnered in for a twelvemonth perhaps—or, perhaps, for all time. Little ill-feeling is created on the whole; for, when beggars play at being rich people, the sport soon becomes of necessity harmless. Occasionally some blustering swaggerer who twenty years ago was a second-rate coverpoint, and has since depended on the University or the Eton and Harrow matches for a pitiful income, may bully a poor lad whom he has wheedled out of a ten-pound note; and, book and pencil in hand, all the world like a Bromley betting-man, may demand immediate payment; but such instances are rare. To the credit of those concerned, it may be said that many a thousand pounds lost over the University match and remaining unpaid has never been asked for, and that there has been no diminution of friendship between winner and loser. Evil will be the day when two young fellows, who have no business to risk a sixpence, shall take advantage of a piece of good or bad luck to treat one another like a couple of Jew bill-brokers.

To return, however, to the point from which we have wandered. Public form was altogether upset by the issue of the University match; and this was one of its many surprises. Oxford, to go back no further than the matches played on metropolitan grounds, had beaten not only the Marylebone Club, assisted by its professional bowlers, but also the county of Middlesex; and Middlesex brooks few superiors. Cambridge, on the other hand, had been well beaten by the Marylebone Club, and had also suffered defeat at the hands of the comparatively weak county of Surrey. Nor could there be two opinions about the Cambridge bowling. It was essentially weak. On the contrary, the Oxford bowling was effective; it had proved itself to be so; and one of the two fast bowlers had in 1871 accomplished the feat of taking every Cambridge wicket at Lord's. What had been would be again; and therefore, even admitting that Cambridge had some good batting, there could be no doubt about the result; on the contrary, the result hung on the balance up to the last, and the verdict, as finally announced on the telegraph board, was so doubtful that many of the prominent supporters of Oxford must have lost their appetites for dinner, while many of the hangers-on—tidewaiters on fortune—threaded their way (to use the correct expression) through the crowd, and were seen of men and takers of odds no more. Then, as to the contradiction of established precedents at this match. Experience has shown that one fast bowler, on one side or another, nearly always comes off. Last year Mr. Powys for Cambridge, the year before Mr. Butler for Oxford, in former years Mr. Fellowes, Mr. Teape, and others whose name is legion, have borne the brunt of the battle, and have confirmed the theory that Lord's is essentially a bowler's ground, and still more essentially a fast bowler's, if he has a little luck on his side. This year the two fast bowlers of Oxford, Mr. Butler and Mr. Boyle, did but little good, and never established a panic for a moment, while Mr. Sims, the Cambridge fast bowler, was absolutely useless. Mr. Jeffery, a slow bowler, or thrower, or whatever critics may please to designate him, got rid of the powerful Oxford Eleven in their first innings; and Mr. Ridley and Mr. Maude disposed of Cambridge in their second innings. Then again, the fielding is always considered one of the great points of the University match. Men are just at their best for fielding then. To the quickness and agility acquired at school is added the strength obtained in increasing years; and, with very few exceptions, an amateur's fielding wanes year by year after he leaves college till it becomes so ineffective as to neutralize that batting power which deserts a cricketer last of all. This week the fielding shown by the two Elevens would have been more suited to a Lords and Commons match—and wonderfully stiff in the back our hereditary and elected legislators are. Let us hope that their principles are equally rigid. There was an absence of that lissomness, that power of sudden dash and quick recovery, for which we are so in the habit of looking from young men of twenty to twenty-two years of age. The return of the ball also, and the throwing generally, were unprecise and irregular. There was a strange want of life and spirit about the fielding, which was, for the most part, dull and heavy. It was essentially, from beginning to end, a batting contest, a struggle of power, patience, and perseverance, between two Elevens of batsmen. And, as such, it was deserving

of high commendation, as well as remarkable as a novelty in University matches. There was no very brilliant or very difficult bowling on either side, and no very dashing fielding; there was of course a certain number of straight balls, requiring to be met with a straight bat; and the question was, on which side would there be shown the greatest amount of steady resistance. In effect, there was very little to choose between the two sides; for each had excellent batting, and with one or two exceptions the best men on each side fully sustained their reputations. The Cambridge captain had bad luck; but, to counterbalance that, Mr. Wallroth, one of the most dangerous men on the other side, was not allowed by fortune any opportunity of distinguishing himself. If the palm of merit is to be bestowed, it must be awarded to Mr. Ottaway, whose unrivalled steadiness would have been sufficient to break the hearts of any bowlers. As a captain also it must be said that he shone conspicuously, the management of the Cambridge Eleven being in many respects very faulty. In fact, the last chance of Cambridge was wantonly thrown away on Tuesday by no long stop being put to Mr. Jeffery's bowling.

We must add, in conclusion, that very little can be said in favour of the wickets provided for this great match. There has not been a single good wicket at Lord's as yet this season; and experience tells us that when once the Eton and Harrow match is over, the ground is left pretty much to take care of itself. This sort of management will not pay in the long run. The great and well-deserved popularity of the present Secretary of the Marylebone Club may enable matters to be carried on at Lord's during his tenure of office on the principle of getting as much as possible out of the pockets of members and the public, and doing as little as possible for one or the other; but such a state of affairs will not continue for ever. It is almost an insult to common sense to suppose that a club with an income of ten thousand a year cannot find the means of covering half-a-dozen acres with turf adapted to the game of cricket; yet we dare say the Committee of the Marylebone Club would plead that they spend plenty of money, and yet that the grass will not grow. They had better then shut up the gates of their ground, because there are other clubs in London whose Committees do not spend so much money, and yet can make the grass grow, and who can provide wickets for any number of great matches, on which cricketers may play without any fear of their teeth being knocked down their throats, or their arms being disabled.

REVIEWS.

BEESLY'S SKETCH OF GREEK AND ROMAN HISTORY.*

WE always note with interest the kind of food which is provided for the boys of our great schools, especially when the food is really home-made and not got up by speculators outside. A book written in a school, for the boys of that school, by one of the masters of that school, is worth infinitely more as evidence, and it is really likely to be worth more in itself, than any number of Student's Humes and rubbish of that kind, got up to order by some drudging editor or some enterprising publisher. The gap between the real scholar and the schoolmaster is commonly rather a wide one; but a genuine schoolmaster's book helps us to see how wide it really is, and whether anything is doing towards bridging it over. Mr. Beesly's little book, dictated to, and written down by, the Marlborough boys, helps us to see, most likely what the Marlborough boys are learning, at any rate what Mr. Beesly is teaching them. We see that they are taught a great deal of Mommsen and a little of Curtius; and we see that some faint notions of the relations of Greek and Roman history to the general history of the world are beginning to make their way, if not into the minds of the boys, at least into the mind of their teacher. Perhaps those notions are as yet too faint to get far beyond the mind of their teacher; still it is a wholesome and needful stage that they should be getting there at all. Anything that is really wanted to be remembered, especially if it sounds at all novel and paradoxical, should be put forth very clearly and boldly, and it is no harm to put it forth a good many more times than once. In teaching Greek and Roman history we should remember, from the very first moment, to take care of the two ends. The teacher should make the lads feel from the very first moment that Greeks and Romans were not only real men—it is something to get as far as that—but that they were also men akin to ourselves, that their language, their mythology, their institutions, were all part of the same primæval stock as our own. This kind of thing should not be kept as a piece of esoteric knowledge for higher forms or anything of that sort; it should be well put into the boy's head from the first moment that he hears of a Greek or a Roman at all. It is the old story, which we are not ashamed to preach again for the ten-thousandth time, that what seems hard to the teacher who has to unlearn is not hard to the learner who has only to learn. Mr. Beesly clearly knows something about these things himself—that he is a little behindhand is shown by his using the obsolete word "Indo-Germanic"—but he is half afraid to put them out to his boys. He says something about them, in a rather feeble and halting way, when he gets to the beginning of his Roman story; but he begins Greece by talking about "four great Asiatic Empires," as if he were afraid of Professor Rawlinson, as if he wished to do something for the so-als' health of his boys by talking to them about Nebuchadnezzar. So, at the other end, Mr. Beesly clearly has glimmerings that the Roman Empire did not altogether come to an end in 476; he lets out, as it were, that something of the kind went on, that it lingered almost to our own day, that it had a great effect on men's minds, and that, alongside of all this, the actual unbroken Eastern Empire went on for a long time without interruption. Mr. Beesly has clearly heard of all these things; but either he has not yet learned that they are the central facts round which all history gathers, or else he thinks them too strong meat to be good food for the Marlborough boys. So he tells them that the Empire came to an end in 476, and at the same time gives them a kind of hint that it did not. Let us assure him that all these things, instead of being strong meat at all, are the merest milk for babes, if only the babes have not got hold of some kind of Godfrey's Cordial before they are helped to the milk. When the thing is once grasped, there is really nothing mysterious in the fact that Justinian and Heraclius ruled from the Ocean to the Euphrates. Still, with all this, it is something to find masters in our great schools so much as feeling their way towards clear and scientific notions of history. Mr. Beesly is still only in the court of the Gentiles; but it is something to be even there. It is something to have even set foot in the right path, and to have left outer darkness behind.

Mr. Beesly shows himself far more at home in the Roman than in the Greek part of his story. That is to say, a great part of the Roman sketch is really a summary of Mommsen, while in the Greek part we only see a few touches from Curtius. And we are glad to see from the Preface that the great writers of our own tongue are not wholly forgotten in Mr. Beesly's teaching. For besides "Mommsen's Portraits of the great Roman Leaders," the boys are recommended to read "Arnold's account of Trasimene" and "Grote's account of the battle of Syracuse." The Greek part is very short compared with the Roman, and it has apparently been slurred over and done in a hurried way. For instance, Mr. Beesly should not say that "there was the legend of the Trojan war, which has been commemorated in the Iliad," and directly afterwards that "at the time of the Trojan war Argos was the chief State." Such a way of talking as this cannot lead to any clear understanding of the difference between history and legend, and it must leave the boys rather puzzled to know whether Mr. Beesly looks on the Trojan war as a real event or not. But still less should he teach them that "at the time of the Trojan war Argos was the chief State." It is the most remarkable thing in the Homeric politics, a thing which Thucydides remarked long ago, even if Mr. Beesly has not, that "at the time of the Trojan war"—that is, during the state of things which Homer describes, whether there was a real Trojan war or not—the chief power of Greece was not Argos, but Mykênê. This is just one of the things in which the mythical story cannot be wrong, and which therefore ought specially to be impressed on the learner's mind. Mr. Beesly should surely be able, when the Marlborough boys construe the line which tells them that Agamemnon reigned over many islands and all Argos, to teach them that Argos here is not merely the city so called, but all Peloponnesus at the least. Then again, in the next page, Mr. Beesly has got hold of Mr. Grote's striking comparison between Greece and Switzerland; but he tells us that "it was broken up as Switzerland is broken up now, and the ties which connected it were much the same sort of ties which now connect Switzerland." Now in the page before he had said, very truly, that the only bonds of union among the Greeks were, "a common origin, a common religion, a common mythology, common oracles." Does Mr. Beesly really think that the Swiss cantons are now bound together, or even that they were bound together up till 1798, by no closer ties than these? Does he not know that the lack of a common origin and a common religion is just the thing which keeps them separate, so far as they are kept separate? Mr. Beesly probably means what Mr. Grote meant—namely, that Greece was then, and that Switzerland is now, the chief example of a system of small States; but Mr. Grote took care not to express himself in the confused and inaccurate way in which Mr. Beesly has done. Directly afterwards we get a glimmering of Curtius; "As to the inhabitants of Greece, some say that Greece was peopled from what are called Greek colonies of Asia, others say that these were really Greek colonies of the Greek towns." We see no reason at all to adopt Curtius's view on this head, but if the matter was to be mentioned, the two doctrines should have been put forth a little more clearly. Then we read:—

> In Greece proper the chief Ionian state was Athens, the chief Dorian state was Sparta. The great lawgiver of Sparta was Lycurgus. By victories over the Messenians and Argives Sparta acquired the headship of the Peloponnesus, and when the Persian war broke out was the chief state of Greece. The rural inhabitants of Laconia were called Perioeci, the slaves were called Helots. The Spartans themselves were the descendants of conquering Dorian immigrants. The Perioeci were the descendants of the race those immigrants conquered.

Now, whatever we think of the historical truth of the details of the Dorian invasion, surely the great change which made the geography of historical Greece so different from the Greece of the Homeric catalogue ought to be spoken of directly in its place, and not to be thrust in a corner in this way. Nor is it accurate to say that Kleisthenes "expelled the tyrant," though of course it is better to think so than to think he expelled by Harmodios and Aristogeiton; Kleisthenes had a hand in bringing about the expulsion

* *A Sketch of Greek and Roman History.* In Four Chapters. By A. H. Beesly. For the use of Marlborough College. Rivingtons: London, Oxford, and Cambridge. 1873.

surely Kleomenes and his Spartans who actually expelled him. Mr. Beesly's book is certainly on a very small scale, but, on the one hand, he has sadly starved the Greek part of his little book, in order, as it would seem, to put forward some particular notions about Roman imperialism, and moreover an accurate statement does not necessarily take up more room than an inaccurate one.

Mr. Beesly gives a picture good in itself, but rather disproportioned to the scale of the Greek part of his book, of Athens in her glory under Perikles. But all the later part, even the struggle against Philip is sadly cut short, and, both here and in the Roman part, we get the exploded notion about Achaia becoming a Roman province in B.C. 146 about its being the last Greek State which the Romans annexed, and so forth. All this wipes out the fact, so characteristic of the Roman policy, that Achaia itself was not made a province all at once, and that several free Greek States lived on to be annexed by Vespasian. Their freedom was of course only held by sufferance, as the freedom of San Marino is now; but it is an important part of the history both of Greece and Rome that States in this relation were systematically allowed to go on till a very late time. On the whole, Mr. Beesly's sketch of Grecian history is very slight, and is by no means so accurate as the work of a teacher of youth ought to be.

The Roman part takes up a much larger proportion of the book, and it is much more carefully done. It is, as we have said, mainly a summary of Mommsen. In page 49 we even find a whole passage of Mommsen, a very true and eloquent passage certainly, embedded bodily in Mr. Beesly's text. But towards the beginning there are touches from Mr. Seeley; and Mr. Beesly tells us that, in dictating the Fourth Chapter, he constantly referred to Mr. Congreve's *Roman Empire of the West*. Some people, it seems, do not know when they are killed; we had thought that Mr. Goldwin Smith had made an end of Mr. Congreve long ago. When we say that Mr. Beesly gives us chiefly a summary of Mommsen, we are pretty well relieved from criticizing Mr. Beesly in any detail. Whatever people think of Mommsen, they will think the same of Mr. Beesly. At the same time, we wonder that Mr. Beesly has given so little space to the earliest parts of Mommsen's theories, his inquiries into the ante-Roman state of Italy, which to our mind are worth far more than any of his political talk. But, whether Mommsen speaks with his own mouth or employs Mr. Beesly as his prophet, we wonder more and more at the notion that Caius Gracchus ought to be looked upon as a King or one striving to be a King. We are more concerned with the winding up, where, as we said, Mr. Beesly has got some glimmerings, but only glimmerings, of the connexion between Roman and universal history. Let us see Mr. Beesly's notion of Odoacer:—

> Ricimer was one of the barbarian defenders of the empire. He made his creatures emperors one after the other, preferring to be himself a "mayor of the palace." Odoacer succeeded to his position, but he was sick of the fiction of an emperor, and setting aside the puppet-emperor Augustulus (it is not without significance that the first emperor was called *Augustus* and the last Augustulus) sent the insignia of royalty to the emperor of the East at Constantinople, and made the senate of Rome acknowledge that the visible power had passed for ever from the Eternal City. . . . . Odoacer only substituted the regal for the imperial title, and imitated as far as he could the old régime. The same may be said of Theodoric and, in France, of Clovis. There was in fact no other system to take as a model, and there was still before men's eyes the surviving Eastern empire to keep alive the old faith in imperial institutions.

Mr. Beesly here shows that he has some kind of notion that the Empire went on at Constantinople, but, if Odoacer was "sick of the phantom of an Emperor," he showed his sickness in a very odd way by receiving from the phantom the rank of patrician and the government of Italy. Theoderic, passed over in half a line, put on a level with Chlodwig, and quartered, along with the West-Goth Theoderic, in *France*, show us that Mr. Beesly has a good deal to learn before he will have reached the stage at which he can do much in the way of teaching others. But we believe that he has really set out, though he has as yet not got on very far, in the right way; so we wish him all good luck in his future studies.

LONGMAN'S THREE CATHEDRALS OF ST. PAUL'S.*

IT was a timely thought on the part of Mr. William Longman, whose services on behalf of the completion of St. Paul's as Chairman of its Finance Committee cannot be over-estimated, to enlist popular interest in Wren's great work by a volume of miscellaneous information, pleasantly strung together and charmingly illustrated, on the Cathedral of London. No doubt the history of St. Paul's had recently been told in classical and stately diction by the eloquent pen of Milman; but the late Dean's standard work is not a volume likely to engage the easy studies of that miscellaneous multitude of readers who require to be reminded at this moment, not only that there is a St. Paul's which they are bound to respect, but a St. Paul's which they are bound to assist in making still more worthy of the care and admiration of future generations. We wish that, instead of its somewhat lengthy title, Mr. Longman had called his book "Old and New St. Paul's," for the actual title-page not only leads the reader to expect a variety of information which no archæologist is fully competent to supply, but, as we believe, it also involves an assumption which it would be impossible for any one to justify. We do not find Ritu[illegible] indeed [illegible] is open [illegible] "of the Three Cathedrals dedicated to St. Paul in London, [illegible] to their Structure and Architecture, and the Sources [illegible] way of [illegible] which were derived. By William Longman, F.S.A. [illegible] altogether. 1873.

complain that the author passes away from the first of his "three" Cathedrals on the second page; for it is our conviction that this first Cathedral, as the first of three churches of St. Paul's, never had a distinctive existence. The case stands thus: a fire, as to the date of which there has been some uncertainty, but which Mr. Longman assigns to the year 1087, consumed the then Cathedral of St. Paul's. Four hundred and ninety years before this date Mellitus, one of St. Augustine's companions, himself the first English Bishop of London, and subsequently Archbishop of Canterbury, procured the foundation, by the Bretwalda Ethelbert, in the city over which he presided, of a monastic church, dedicated in honour of St. Paul, and serving as the Cathedral. Mr. Longman's assumption, unsupported by evidence, is that the building consumed at the end of the eleventh century could claim an architectural identity with the one constructed at the end of the sixth, after having endured through five centuries of changing customs, ebbing and flowing civilization, civil turmoils, Danish invasions, and unrecorded conflagrations. Accordingly, he assumes the continuance during this time of as distinctive a first Cathedral as the building constructed by Wren, and now ruled by Dean Church, is on the same theory the third. We simply record, upon the credit of our architectural experience, that we hold this continuity to be next to impossible. If there were any building of the early middle ages of which the continuous identity might seem undoubted, it would be the pre-Norman Cathedral of Canterbury, regarding which there is a succession of authorities, including such writers as Bede, Osbern, Eadmer, and Gervase, whose accumulated evidence all supposes that the Roman Church restored by St. Augustine existed with many alterations until its ruins were razed to make way for his own nobler structure by Lanfranc. Yet Professor Willis, in his *Architectural History of Canterbury Cathedral*, after mustering their collective statements, is driven, in speaking of the Church as enlarged by Archbishop Odo between 940 and 960, to ask "who can tell" whether "this was the ancient Roman Christian building, or whether Augustine or one of his successors might not have rebuilt it?" He continues:—

> It was part of the policy of Augustine, acting under the advice of Pope Gregory, not to destroy the heathen temples, but only the idols therein, and to consecrate these buildings to Christianity, that the people might the more readily be induced to worship according to the new doctrines, because the buildings were familiar to them as houses of prayer; similar motives would operate much more strongly in favour of preserving the old Christian Church; and I do not therefore think it probable that it was rebuilt by Augustine, whatever his successors might have done during the three centuries which separated him from Odo.

Accordingly we may well argue, *a fortiori*, first, that the monastery in the then subordinate city of London was probably a very different pile from Canterbury Cathedral, always metropolitical, if not originally a relic of Roman grandeur; and, secondly, that the inland capital of Kent enjoyed an immunity from the northern marauders which was not the lot of the riparian city on the Thames.

With many alterations for better or worse, the church which existed between 1087 and 1666 continued to preserve a substantive identity, just as the actual Cathedral of Canterbury may claim to be the one which was planned by the two Williams, and might have almost claimed to represent Lanfranc's church, until the stupidity of the Chapter of 1832 destroyed his still remaining tower. Mr. Longman has invested the portion of his book which deals with Old St. Paul's with a peculiar value by his judicious selection of illustrations. As all ecclesiologists know, our chief knowledge of this very noble minster is derived from Dugdale's *History of St. Paul's*, first published in 1658, with illustrations by Hollar, and subsequently reprinted in 1716, and again in 1818 by Sir Henry Ellis. The artists of Hollar's days were unable and unwilling to master or reproduce the details of mediæval architecture, and consequently his plates, judged by the modern standard, are audacious examples of pictorial inaccuracy; besides which, they show St. Paul's as it stood in the first half of the seventeenth century, with its spire destroyed, and the fabric itself disguised by Elizabethan patchings, and Inigo Jones's Italianizing restorations. Still [illegible] are particular enough to give his clue to the architect [illegible] should set to work to re-create Old St. Paul's by modern lights, and so a few years since the Institute of British Architects proposed that work as one of its annual prizes, which was won by a remarkable set of drawings done by the son of the well-known architect, Mr. Ferrey. These designs, which have hitherto remained unpublished, are now given to the world on a reduced scale by Mr. Longman in a series of beautifully executed steel plates, representing the Cathedral as it stood in 1540, which may be taken as the date of its matured perfection. We do not hesitate to say that this resurrection of one of the noblest, as well as the most spacious, of mediæval fanes is an epoch in the history of Gothic architecture. Had Dean Milman seen these designs, we are convinced that he never could have penned that depreciatory judgment of the old church which stands out in his *Annals of St. Paul's* in strange contrast to the usual fairness of his critical estimates:—

> Of England's more glorious Cathedrals, it seems to me, I confess, none could be so well spared. It must have been a gloomy, ponderous pile. The nave and choir were of different ages (that was common), but ill formed, ill adjusted together, with disproportioned aisles and transepts, and a low, square, somewhat clumsy tower, out of which once rose a spire, tall indeed, but merely built of woodwork and lead. London would at least have been forced to bow its head before the Cathedrals of many of our provincial cities, &c.

The truth is, we suppose, that Dean Milman—a strong partisan

years prices have risen, and the value of money has diminished, and many of the salaries in the British Museum were fixed at their present scale as far back as 1837. Great changes have taken place in the course of a quarter of a century. The cost of living has greatly increased, and in almost all ranks of life wages and salaries have gone up too; and it is only natural that the officials of the Museum should feel the pinch. They have always been indifferently paid, considering the qualifications required from them, and their position contrasts unfavourably in this respect with that of clerks in other Government offices. The Trustees referred the memorials of the different sets of officials to a Sub-Committee consisting of the Duke of Somerset, Lord Derby, Lord Stanhope, Lord H. Lennox, Lord Acton, Mr. Walpole, and Mr. Disraeli. The Sub-Committee state that they were informed that, "owing to the insufficiency of the salaries, the slowness of their progressive rise, and the lowness of their maximum," the Museum was losing and would continue to lose its best men. Several valuable and promising officials were mentioned who had found better paid employment elsewhere, or who were known to be seeking it, and it was added that others were only held back by the hope that some improvement might be made in their position. These assistants were anxious to retain their connexion with the Museum, but they felt it impossible that they could remain on such poor salaries as were at present assigned to them. These representations appear to have made a strong impression on the Sub-Committee, and they came to the conclusion that the evil was really a grave one, and that the only remedy would be to establish "a scale of remuneration which will not only induce well-qualified men to enter the Museum, but will hold out such a prospect for the future as may induce them to remain in the service of the Trustees." They go on to explain in detail the importance of having a competent and experienced staff. The duties of assistants vary according to the departments to which they are attached, but they must all be men who have received a liberal education, and who know several languages in addition to their special departmental qualifications. The work of the Museum is of such a nature that it is important to have the superior grades filled by men who have been trained in the establishment. The keepers of departments have to discharge arduous and responsible duties. They have the care and custody of the collections, and have to see that they are kept abreast of the scientific researches of the day, and that the objects in the collections are properly described, classified, and preserved. It is obvious that work of this kind demands high scientific attainments; but the keepers must be something more than men of science. They must be men of business also. They have a great many administrative functions to perform, and assistants and attendants to look after. It will be understood, therefore, that men possessing the necessary qualifications for these offices are not to be picked up every day. Accordingly the Sub-Committee recommended additions to the salaries of the officials of the Museum amounting in all to some 2,700*l.* a year to begin with, and reaching at the end of a few years a maximum of 5,700*l.*

The Report of the Sub-Committee was unanimously adopted by a general meeting of the Trustees, with a supplemental recommendation that 200*l.* should be added to the joint salary of the Principal Librarian and Secretary. These resolutions were forwarded to the Treasury, who returned a curt reply that "My Lords" regretted that they "would not feel warranted in acceding to any alteration in the present scale of salaries." It will be observed that the answer of the Treasury sweeps aside *en bloc* all the recommendations of the Trustees. There is no attempt at discriminating between the different sets of officials, no partial concession of their claims, nor even the faintest hint that at any future time those claims will be more favourably considered. The officers of the Museum are given to understand that the present scale of salaries, some of which were fixed more than thirty-five years ago, must remain unchanged, and that if they desire advancement they must seek it beyond the walls of the Museum. In order fully to appreciate the reply of the Treasury, it is necessary to bear in mind the authority of a proposal endorsed by the Trustees of the Museum, the governing body of the institution, who are responsible for the care and management of the collections, and are best fitted to form an opinion on such a question as this. In making their recommendations the Trustees do not speak vaguely or at random. They point out the demoralizing influence exercised on the officers of the Museum by the insufficiency of their salaries. "Men," they observe, "cannot do their work satisfactorily if they are watching for the chances of preferment elsewhere. The interests of the Museum have suffered and will continue to suffer from this cause until the Trustees are in a position to offer such remuneration as will secure and retain the services of the most efficient men." It seems to us that, coming from such a quarter, this is a very serious warning. The governing body of the Museum, consisting of distinguished public men who, it must be assumed, have weighed their words, and who have the best opportunities of knowing the truth of what they assert, intimate that the interests of the establishment are suffering in consequence of the inadequate scale of salaries now in force. Yet the Treasury pass this by as if of no consequence whatever. It is quite clear that if the Trustees are fit to manage the Museum, they are fit to form a judgment on a question of this kind; and the rejection of their proposal by the Treasury is tantamount to a declaration of want of confidence in the managers of that institution. Nobody, of course, would suggest that the Treasury should have no choice as to adopting recommendations proceeding from the Trustees. It is indispensable that the Treasury should have supreme control over the items of the Estimates; but it might at least be expected that this control would be exercised with some regard to the deliberate opinions of those who are immediately responsible for the administration of a great national establishment. The Treasury does not enter into any discussion of the question with the Trustees, or offer any compromise. It settles the whole affair offhand with a sharp and peremptory No. We venture to think that neither the Trustees nor the officers of the Museum deserve to be treated in this way, and the effect which has already been produced on that institution is on every ground to be regretted.

For our own part, we have no sympathy with those who think that the Government of a great country should always make a point of being particularly free and open-handed with its money, and should not look too narrowly into items of expenditure. It is undoubtedly one of the first duties of a Government to keep jealous watch over expenditure, and to study economy in every department. Even the richest country contains a vast number of poor people who have to contribute to its revenues, and who suffer from even a slight increase of taxation. There is no analogy between the liberality of a private person and the liberality of a State, for the obvious reason that in the one case a man is spending his own money, while in the other case the Government is spending the money of other people. Consequently, what might be generosity in an individual becomes extravagance in a Ministry. There is only one justification for spending public money, and that is that an adequate return is obtained for it. This is the test to which we would reduce every item of national expenditure. There is no earthly reason why the State should buy things which it does not want, or keep up establishments which are of no use to it, or why it should pay more than a fair market price either for goods or services. There is nothing shabby in looking into expenditure and seeing that for every sixpence laid out there is value received. In the present instance the Chancellor of the Exchequer is quite entitled to insist that economy shall be observed in the management of the British Museum; indeed he is bound to do so. But then comes the old question, What is economy? In defending his pet Zanzibar contract, Mr. Lowe remarked that a liberal policy was the wisest and truest policy, and accordingly he gave the Union Company 11,000*l.* a year more than they had first bargained for. But the real test is whether this is the lowest rate at which the Government could secure the efficient performance of the contract; and this is the question which the Select Committee will have to examine. The same test may be applied to the state of affairs in Bloomsbury. Can an efficient staff be obtained at the present scale of salaries? The Trustees assert that it cannot, that good men are constantly being drawn away from them, that those who remain are dissatisfied and unsettled, and looking out for chances elsewhere, and that the whole establishment is gradually becoming demoralized. It is quite clear that the sort of men who are wanted for the Museum are not to be found in abundance, and that even if men could be found at low salaries to discharge the mere routine duties of the place, it would in the end be more profitable to pay a little more in order to secure the services of men who are capable of rising above routine work, and of promoting the interests of learning and science. The British Museum is an establishment by itself. Its officers belong to a peculiar class, possessing special qualifications, and it is difficult to imagine any public department to which it would be more unwise to apply a grudging and pinching parsimony. If it should turn out that the Government have 11,000*l.* to spare on the Zanzibar contract, they will be in a position to grant the application of the Trustees of the British Museum for a small fraction of that sum.

THE ITALIAN OPERAS.

EXACTLY the same story might be told about the proceedings at Drury Lane up to this moment as about those at Covent Garden, narrated in our last number. Not a single new or unfamiliar work has hitherto been given at Her Majesty's Opera; but in compensation various singers have appeared, who, although unknown here even by name, have, with more or less good reason, acquired some sort of distinction abroad. Mr. Mapleson was less liberal in his early promises than Mr. Gye. Three out of four "novelties" advertised in his prospectus are no novelties at all, unless well-worn operas become novelties on account of the simple fact that certain of the *dramatis personæ* are to be newly cast. *La Favorita* has been familiar here ever since it was produced by Mr. Lumley at Her Majesty's Theatre in 1847, on the first night in the first year of the opposition at Covent Garden—when Signor Gardoni made his *début* in London as Fernando, and Madlle. Sanchioli, also a stranger, was the Leonora. How thoroughly amateurs are acquainted with every scene and phrase of *Dinorah* (*Le Pardon de Ploërmel*) need scarcely be told. Brought out in its Italian dress, and with its new title, at the Royal Italian Opera (1859), under the superintendence of Meyerbeer himself, who took an active part in the rehearsals, it has ever been one of the popular, as it is undoubtedly one of the most original, of Meyerbeer's lyric dramas, holding its own even against *Il Trovatore*, a composition of a very different order, and its composer's masterpiece. Nor has the *Mignon* of M[illegible] always acceptable when Madlle. Christ[illegible] of the heroine—so unlike in some

to the real Mignon of Goethe's *Wilhelm Meister*—any more claim to be styled a "novelty" than the other pieces enumerated. The only absolute novelty spoken of by the director of Her Majesty's Opera is a posthumous work by Balfe. The libretto is founded upon one of Walter Scott's *Tales of the Crusaders*, which Mr. Mapleson announces with a conglomerate title in two languages—"*Il Talismano; or, the Knight of the Leopard.*" That Balfe, who, from the *Siege of Rochelle* (1835), the *Maid of Artois* (1836), founded on the *Manon Lescaut* of Abbé Prevost, the first and only opera composed by an English musician for the celebrated Malibran, down to the *Bohemian Girl*, the *Rose of Castille*, and their somewhat less vigorous successors, played for many years the part which, according to the expression of Jules Janin, Alexandre Dumas (*père*) played in another way—that of "*le grand amuseur*"—had nearly finished an opera upon which he set great price, was widely rumoured in musical circles. If Sir Michael Costa has consented, as is stated, to supply everything wanting to complete the work, it will be doubly welcome; for though Balfe was by no means a great composer, he unquestionably held his place, even when Vincent Wallace came to contest it—not to speak of Sir Julius Benedict and Mr. G. A. Macfarren, more gifted musicians than either of them. It is hoped then that Mr. Mapleson may be enabled to redeem his pledge, and that the *Talismano* will positively be forthcoming, more especially as Madlle. Christine Nilsson is to sustain the chief character—Edith Plantagenet. The final clause in the prospectus, referring to *Les deux Journées* ("*Le due Giornate*," or the "*Wasserträger*," as the Germans call it)—"the production of which, last season, created so much satisfaction in musical circles as to induce the director to repeat the opera, if the other important arrangements will permit"—is amusing. The compliment to Cherubini, and to those who hold with Beethoven that Cherubini was one of the greatest of dramatic composers, is doubtful. And then it may be asked, what are "the other important arrangements"?

To more than these promises Mr. Mapleson has not committed himself, but, like Mr. Gye, in default of novelty, is content to fall back upon the repertory conveniently at hand. This, although, through circumstances unnecessary to explain, not so varied as that of Mr. Gye, who for many years has been supreme controller of one particular theatre, is sufficiently large, and on the whole up to the present moment good use has been made of it. Mr. Mapleson, it must be admitted, possesses a company efficient at all points, a fine orchestra, an excellent chorus, and in Sir Michael Costa the most skilful and experienced of operatic conductors. It would be difficult to imagine anything more satisfactory than the *ensemble* (to use a French word for which we have no English equivalent), obtained by the sagacity and scrupulous vigilance of this admirable chief, who seems to know every opera by heart, and is watchful over the minutest details. The phrase "*facile princeps*" may unhesitatingly be applied to Sir Michael Costa, who has earned his right to it by long perseverance and rare natural endowments, combined with that rigid enforcement of discipline which is no less indispensable to the command of a body of musicians than to that of a regiment of soldiers.

From the list of Mr. Mapleson's principal singers this year we miss the name of Madlle. Marie Marimon, who, on her first appearance, created an impression so extraordinary that it is difficult to account for its weakening and weakening as time went on. That such was the case, however, is not to be denied, and we can only attribute it to a strongly pronounced mannerism, which, attached to all her performances, made one performance appear so like another that, despite her singular ability in a special direction, even those who at the first were her warmest admirers became more and more indifferent. "Very clever and brilliant," everybody said—but really, at last, no one cared much about it. The other acknowledged favourites of Her Majesty's Opera—including among the ladies Madlle. Tietjens, Madame Christine Nilsson, Madame Trebelli-Bettini, and last, not least, Madlle. Ilma di Murska (absent last year); among the gentlemen, Signors Mongini, Campanini, Fancelli, Rinaldini, Ilota, Mendioroz, Agnesi, Borella, not to name the minor satellites—have all appeared. In addition to these, Mr. Mapleson, like the director of the rival theatre in Bow Street, has tried experiments with strange singers, or at least singers strange to this country; and, on the whole, with proportionate success. In his prospectus the Drury Lane manager assures us that the merits of the new artists he has engaged "justify him in confidently subjecting them to the severe ordeal" of "being presented to the patrons of Her Majesty's Opera." This, at first sight, would not, in the eyes of connoisseurs, signify a great deal, seeing that, for the most part, frequenters of the Italian Opera are not universally regarded as over-subtle judges. The talk about a "double company," moreover, is somewhat grandiloquent; while that about the "production of this great work," referring to the *Talismano* of Balfe, of which no one, Sir Michael Costa perhaps excepted, just now knows anything, seems a trifle overstrained.

Mr. Mapleson may be congratulated on more than one of his new acquisitions. Signor Medini, who appeared on the first night of the season as the Duke of Ferrara, in *Lucrezia Borgia*, has a fine bass voice, and is an actor of considerable intelligence. There is, however, a tendency to force his voice, and thus [illegible] his intonation. This was not only remarked [illegible] Ritual [illegible] hat in other operas. Madlle. Ostave Torriani [illegible] is open [illegible] youth and a prepossessing appearance; [illegible] way of doing [illegible] to do entire justice to the part of [illegible] altogether. [illegible] which we have seen so many distinguished artists, from Madame Bosio to Madame Adelina Patti and Madlle. Emma Albani. Madlle. Torriani is at present inexperienced as an actress, while as a singer, though her voice is young and fresh, she has much to learn and as much to unlearn. In the same opera, and on the same occasion, another stranger, Signor Del Puente, a barytone, appeared. The character assigned to him was Rigoletto. His voice possesses a certain marked individuality, but his method of delivery is not always precisely legitimate, and therefore not always precisely agreeable. Nevertheless, though far from being a Ronconi (the Rigoletto *par excellence*), Signor Del Puente has unquestionable ability; and notwithstanding his wont to make more than is demanded out of every situation and position, there is enough in all he does to encourage the belief that one day he may achieve excellence, both in the histrionic and vocal departments of his calling. Another newcomer, Madlle. Justine Macvitz, with a pleasing *contralto* voice, looks pretty, sings very well, and acts with liveliness—in short, is a more than acceptable Maddalena. Last and least, a Signor Pro impersonates the *spadassin* Sparafucile, in a manner to cause regret for the absence of Signor Foli—not to name the Sparafucile of Sparafucile, Signor Tagliafico. Madlle. Macvitz shortly afterwards, Madame Trebelli being indisposed, was cast for Azucena in the *Trovatore*, and Signor Del Puente for the incomprehensible Conte di Luna—both making a step in advance, augurring well for their future career.

Another newcomer, Madlle. Alwina Valeria, an Englishwoman, (or at least an American), we believe, who studied first at the Royal Academy of Music under Mr. Wallworth, and then took lessons from Signor Arditi, made her first appearance on our Anglo-Italian stage, as the Lady Enrichetta of Flotow's terribly hackneyed *Martha*. Madlle. Valeria, notwithstanding the manifest disadvantage of coming immediately after Madlle. Ilma di Muraka in the same part, achieved a fair success, and won the stereotyped encore in "Qui sola vergin rosa," for which she substituted, in accordance with prevalent custom, Moore's "Last Rose of Summer." A sillier custom, when Italian opera is in question, could scarcely be imagined. We are aware that Madame Adelina Patti set the example by introducing "Home, Sweet Home" after the encore which usually follows whatever other irrelevant piece she may happen to sing in the Lesson scene of the *Barbiere*; but great artists should be copied in their perfect achievements, not in their unaccountable eccentricities. Madlle. Valeria, who has been in Italy, and has sung at concerts in England, was a *debutante* on the London operatic boards. More credit is therefore due to her for the favourable impression she created. Her voice is good in the higher tones of its register, and is in a certain degree flexible; but it still lacks cultivation, which, so far as we are able to judge, only the most diligent and methodical study can bring. The first representation of *La Favorita*, besides introducing Madlle. Tietjens in a part she had never previously essayed in London, brought forward a new tenor, Signor Antonio Aramburo, who, if we may believe the official prospectus, has already made the tour of Italy, Sicily, and Spain. A new tenor, supposing him possessed of voice and capabilities, is *a rara avis*; and, like a new soprano, has always the chance, to employ the language of operatic critics, of "taking the town by storm." Signor Aramburo, however, took nothing "by storm." That he has a good voice is undeniable, and that he has in a great measure learned how to use it is equally beyond question; and this was shown by his delivery of the famous air, "Angiol d'amore," in the last act. Wherever dramatic energy or dramatic expression is required Signor Aramburo was sadly deficient; and the great scene in which Fernando reproaches the King with the indignity thrust upon him under the simulated form of honour left him powerless. It was, in truth, entirely beyond his capacity. Whether the fact of Mario, among all representatives of Fernando incomparable, being in the house to a great degree intimidated Signor Aramburo it is not easy to say; but that he is capable of much better things than he achieved on the evening to which we refer has been exemplified on more than one occasion, and on none more convincingly than the other night, when he appeared as Pollio (to the Norma of Madlle. Tietjens), by his manly bearing and vigorous though unexaggerated singing, like Tamberlik before him, almost rendering that most insipid of dramatic personages acceptable. Signor Castelmary, another new barytone-basso, who made his first appearance as Mephistopheles, in *Faust*, did not create a very lively impression. He gave a more than usually grotesque delineation of the character, and sang in a style hardly less grotesque. Nevertheless this gentleman has unquestionable ability, as was subsequently evinced by his impersonation of Lothario in *Mignon*. Of the other new comers—Signors Cantoni, Collini, and Catalani, the last of whom appeared on Saturday as Mephistopheles—we prefer speaking on another occasion. With these the list of Mr. Mapleson's most recent engagements closes. He has not been quite so fortunate as Mr. Gye, who at least can boast of M. Maurel.

There are no more remarks to offer about Mr. Mapleson's new singers, and we have merely to add that the old ones have, as usual, done good service to his establishment. About Madlle. Tietjens as Lucrezia Borgia, Semiramide, Leonora (*Il Trovatore*), Valentine (*Les Huguenots*), and Norma, it will suffice to say that now, as of recent years, she maintains her position as the legitimate successor of Giulia Grisi. This great artist has added another character to her already extensive repertory—namely, that of Leonora in Donizetti's *Favorita*; and though it might have been

at all times of classical and renaissance art—holding, as he did, the brief for new St. Paul's, was led to take the misguiding lineaments of Hollar's prints as exhibiting the actual structure. As unravelled by Mr. Ferrey, Old St. Paul's claims the verdicts (however differing) of those who accept and those who reject mediæval architecture as one of the most stately, and in parts the richest, minsters which the world has ever possessed. We shall not attempt the description of its long-drawn Norman nave and aisles of twelve bays, flanked to the south by the adjacent Church of St. Gregory, and by the smaller cloister enclosing the exquisite Gothic Chapter House, of its central steeple, its transepts of five bays, with both eastern and western aisles, and its aisled eastern limb (including choir and Lady Chapel) also of the unusual dimension of twelve bays—the transepts and eastern portion being of the finest architecture of the thirteenth and fourteenth centuries—the whole extending, as Mr. Ferrey contends, to the enormous length of 596 feet (76 longer than Winchester Cathedral), not of 690 as (apparently by a misprint) Dugdale's text asserts, with proportionate breadth and height; while the tower itself, after the loss of the spire, burnt by lightning in Elizabeth's reign, so far from being, as Milman asserts, "low, square, and somewhat clumsy," absolutely rose to the aerial elevation of 285 feet from the ground, while the superimposed spire so long as it existed shot up 208 feet, of which four were hidden by the tower parapet. In a preceding chapter Mr. Longman accepted a calculation of Wren's making the combined height of tower and spire 460 feet, and he omits to reconcile the discrepancy. The actual Cathedral—its genesis, construction, and future adornment—being very clearly the object for which Mr. Longman mainly writes, he rather sets himself to discourse pleasantly round the old church than systematically to work out the description of it in its architectural, monumental, and ritual character. He has probably judged wisely for the taste of the general public, whose interest in the pending decorations he desires to conciliate; but still we cannot help regretting that, after he had for the first time enriched the world with accurate representations of the mediæval Cathedral, he should not have accompanied Mr. Ferrey's illustrations by correspondingly scientific letterpress. However, Mr. Ferrey's plates are still available for future use, and as neither Dugdale, Milman, nor as yet Mr. Longman has given to the world that which in the present state of ecclesiological knowledge can be accepted as the adequate description of Old St. Paul's, we very earnestly exhort Mr. Longman at some not very distant season to make himself again a public benefactor by launching such a volume.

We observe that Mr. Longman assumes (pp. 8 and 9) that a certain "casing" of the Norman piles and walls of the nave, which by a quotation given by himself in a later page Wren strongly reprobates, was an afterwork of the thirteenth century; but the context of Wren's report shows that he was referring to the original structure, and merely describing in language natural to an architect of his views that defective system of building habitual to the Norman age, which has in our day led to the downfall of Chichester spire, rashly reared by Gothic architects upon supports left by their Romanesque predecessors. Mr. Longman, of course, refers to that famous external pulpit, St. Paul's Cross—more commonly docked of its "St."—but he forgets to tell us where it stood relatively to the Cathedral. However, we learn from Dugdale that it was situated on the north side towards the East-end, and in truth it may be descried in that position in the background of the bird's-eye view of Old St. Paul's and its surroundings which Mr. Longman had compiled from Mr. Ferrey's drawings. But Mr. Longman also gives a woodcut of St. Paul's Cross as it appeared on a certain Sunday in 1620, when Bishop King was preaching before James I. and the then Lord Mayor, for the restoration of the Cathedral, "from, an original picture in the possession of the Society of Antiquaries, London, which is engraved in Wilkinson's *Londina Illustrata*, 1814." There was something so puzzling about the woodcut as it appears in the book, that we compared it both with Wilkinson's engraving and with the original picture at the Society of Antiquaries. The latter is in the form of a diptych, of which the right wing gives the representation in question, that to the left bearing a very curious conventionalized bird's-eye view of St. Paul's, with the central tower capped by a kind of Italian spire or campanile profusely gilt and guarded by floating angels, obviously intended to represent the result which the pious painter anticipated from the appeal depicted on the other wing. This painting (very correctly reproduced by Wilkinson) is also a bird's-eye view of St. Paul's, and like the other wing exhibits an heroic contempt of facts. The nave, which, as we have read, was really of twelve bays' length, is shrunk almost to the dimensions of a big porch, while the choir, also of twelve bays, is given as of four; and, in defiance of perspective, the east end is forced to put in an appearance round the corner. The architectural details are of the most barbarous character, and, after all allowances for the mutilations of time, must be absolutely false. The tracery of the rose window at the east end looks as if it were of cast iron; the arcaded windows underneath are reduced to a modern round-headed type, and there are some unintelligible indications of ruined arcading on the ground story, while the tracery of the windows in the aisles and clerestory is impossibly barbarous. Such was the design which passed into the hands of Mr. Longman's artist, who, as we must conclude, worked from Wilkinson's print, and not from the original. We regret that he should have thought it necessary to reduce the panel by cutting off the right hand portion which included the conventionalized nave, and thereby destroyed the key to the local distribution of parts. Had he been, however, contented to reproduce what was left as he found it, we should not have so much complained. But, instead of so doing, he has set himself to conjecture with some strange results. The four bays of the clerestory in his hands became five, and the barbarous tracery is reduced to something which pretends to be a restoration of mediæval work. Worse than that, the eastern rose assumes fancy tracery; the row of windows underneath is neatly framed with First Pointed shafts and mouldings, and the rudimental ground arcade becomes a door. The designer has obviously been working with the plan of Old St. Paul's before him, and in ignorance of the true locale of Paul's Cross; so he has taken upon himself (1) to discard the nave, believing it to be a transept; (2) to treat what was really the east face of the north transept as if it was the north face of the nave; (3) to convert the conventionalized symbol of the choir into a restoration of the north transept; (4) to furnish out this imaginary transept with an end door at a point which the painter really intended to be the centre of the east end, or just behind the Lady Altar; and (5) thus to shift St. Paul's Cross from the angle made between the east face of the north transept and the north face of the Choir to that made between the north face of the nave and the west face of the north transept. After these extraordinary flights of fancy, it was not much that the playful artist should have converted the grim figures of King and courtiers, Lord Mayor and Aldermen sitting in rows in a two-storied gallery, along the face of the (really) choir, like Easter Island idols, into graceful figures posing as the artist of the *Illustrated London News* is no doubt representing royalties and Corporation as they received the Shah at Guildhall. Mr. Longman is too genuine an antiquary to tamper willingly with any such landmark of history, and we have no doubt that, owing to a too general recollection of the original and a too implicit confidence in the artist, he allowed the cooked design to pass as it is bound, out of regard to historical accuracy, to replace in a future edition by a facsimile of the real diptych.

When Mr. Longman reaches New St. Paul's his [illegible] his native heath. He gives a narrative of the gradual [illegible] of the actual Cathedral from the germinal central cupola [illegible] which Wren was planning still further to transmute the old minster at the instant when that grim "great fire" reduced it to a condition of ruin which justified the men of the seventeenth century in overturning it with gunpowder and battering-ram, but which would have merely stirred up some Committee of our generation to undertake a spirited restoration. Mr. Longman has too much sense to join in the lamentation which it was the fashion of a now obsolete school of critics to pour over the rejection of that first design of Wren's (preserved in the model at present in South Kensington), which, with all its capricious cleverness and very picturesque effects of internal grouping, would have been in dignity, in size, and in internal arrangement totally unfitted for its special destination. He quotes some remarks, which are much to the point, on the exterior by Mr. Fergusson, who is himself too indulgent to the interior. Mr. Longman brings out with much clearness the curious and too often overlooked fact that the present church was not the immediate result of the rejection of the first project. Wren, in fact, entered into a brisk competition with himself (well illustrated by the suggestive selections from his designs at All Souls' College, which Mr. Longman has published), until the strange final result was attained of a design being definitively approved by Charles II. on May 14, 1675, as "very artificial, proper, and useful," as to which Mr. Longman truly observes, that the engraving of it which he gives "will excite astonishment at the possibility of Wren making so poor and tawdry a design, and evidently so unsatisfactory to himself." The Royal approbation was accompanied by the permission given to Wren to make "some variations rather Ornamental, than Essential," of which leave he liberally availed himself, by gradually transmuting the design into the very different building which actually exists. It was happy for his own fame and the glory of London that he should have been thus audacious, but in face of this procedure the boldest practice of modern architects shrinks into tame subservience. Mr. Longman is justly indignant at the pitiful treatment, at once mean and spiteful, to which the great surveyor was subjected by the Commissioners of the work, but he omits to consider how far the architect's obvious independence of official restraint may have begotten the suspicions of those narrow-minded precisionists. We shall not attempt to recapitulate the actual description of the building which Mr. Longman gives, partly in his own words and partly in copious extracts from accredited authorities, from the *Parentalia* of Wren's grandson down to Mr. Fergusson, and to a somewhat pedantic Mr. Wightwick, who seems hardly worthy of the prominence given to his lucubrations.

We think that Mr. Longman rather too easily accepts the adverse criticisms which have been offered upon the flanking chapels which add so much breadth and picturesque effect to the nave. If there is any truth in the grandson's gossiping assertion that Wren adopted these features with sorrow, we believe that it must rather have been because he dreaded a tiff[illegible] row in those days of Godfrey and Oates than because [illegible] that the proportions of his building would be marred. [illegible] man recalls the controversy on the admissibility [illegible] story with which Wren externally masks [illegible] of clerestory and flying buttresses [illegible]

abstractedly a sham, and therefore inadmissible. Practically, however, we must recollect that the construction, if openly displayed would have been in the ponderous forms inseparable from the Italian translation of the flying buttress, and we may well be thankful that Wren had recourse to that which we do not scruple to call, under all the circumstances, an architectural white lie. There is a much stronger justification for the adoption of the double cupola, and we regret to find reason to believe, if the grandson is to be credited, that the elongated form of the external dome was adopted contrary to Wren's favourite wishes.

Mr. Longman's concluding chapter on the Future of St. Paul's deals with the question of its decoration in so judicious a manner that we shall take leave to extract somewhat freely from it, in the hope that the designs on which Mr. Burges is engaged will be found to have been constructed on analogous principles:—

> How colour should be given is the next point. It can be given by transmitted light; by external application in the shape of painting or gilding; and by material. Transmitted light is obviously an important means of giving colour, but can be of only limited application, and, as it has already been considered in a previous chapter, it is unnecessary to enlarge upon it here. Painting, in the form of pictures on walls, according to our modern experience, is, at least in the present instance, unsuited to our climate. Even as an imitation of marble, notwithstanding Sir Christopher Wren's use of paint for this purpose, his example would now find but few followers; and the only way in which paint can be applied to stones seems to be as a coloured wash, in certain positions, where any other mode of obtaining the effect of colour is difficult. Gilding in certain parts of the building is obviously indispensable; but, from the foregoing considerations, it seems to follow that, in our climate colour must, with some small exceptions, be given mainly by material. Here again the question for consideration does not appear difficult to answer, for the only possible coloured materials are marble, mosaic work, and majolica, and of these some are suited to one condition and others to another. That the use of mosaic is essential can readily be a matter of dispute, for the application of marble to concave surfaces is by no means easy, and probably would be comparatively inoperative at any considerable height from the eye. It seems clear, therefore, that the dome and the cupolas of the side aisles, to say nothing of what are parts, should be treated in mosaic. . . . The other mode of producing colour by material, namely, by marble, has now to be considered. It may probably be taken as an axiom that no architect would make use of marble, at any rate internally, were marble equally available; and that the beauty of colour consequently arises from the use of stone. But the entire substitution of one material for the other is not necessary. A surface of marble may be substituted for a surface of stone, and the cost be thereby greatly lessened. The extent to which this substitution should be carried is also a question for the architect. The terrifying spectre of "sprawling saints" and emblematic figures thus entirely vanishes, for it is obvious that, as a general rule, it is only in mosaics that figures can be introduced. It is true that the designs for the mosaics, whether in the dome, the cupolas, or the spandrels, will require artistic skill of the highest excellence for their production; but it is equally clear that they will not easily give room for extravagances representing peculiar ideas as to worship or doctrine.

BRESSANT.*

We are glad to find that Mr. Julian Hawthorne's first work has a sufficient character of its own to mark it off from the writings of that most original of American authors, his father. We were, we must confess, a little alarmed lest we should find in *Bressant* some feeble echo of the *Scarlet Letter*, or of the *House of Seven Gables*. There is indeed a considerable resemblance, but a resemblance that may well come from inheritance, and not from imitation. Generally speaking, a great writer should allow his children to range at freedom through the whole of literature, if only they would consent to allow their father's writings to be to them a sealed book. For if, at the age when everything that a father does is invested with a sanctity of its own, his books are read, the chances are that his faults as a writer will be acquired by his children, and will be reproduced with all the feebleness of imitation, should any of them in their turn take to literature. Whether Mr. Julian Hawthorne did not read his father's stories till his judgment was formed, or whether, though he did read them, he had a mind vigorous enough to keep his own individuality, the result at all events is that, to a greater extent than we should have expected, he stands before us on his own ground and on his own merits. Had we read his first novel without knowing the author's name, we should have been struck by its power, nor should we have found it more wanting in originality than the best of the novels that come before us. While we freely concede great merit to *Bressant*, we must at the same time admit that its faults are still greater. The admirable promise of the first volume is not fulfilled in the second; a pleasant story of homely country life degenerates into a morbid love story of a peculiarly offensive kind, while a superstitious element of what we may may call magnetico-mesmerico-spiritualism is introduced, which, to our mind, is very silly. It is here that we trace the chief resemblance to his father's writings—a resemblance, however, that is sadly marred. The elder Hawthorne's mysticism was so hidden, as it were, by the poetry with which he clothed it, that, like the mysticism of a *Midsummer Night's Dream* or the *Tempest*, it never shocked one by its nakedness. If he believed that the earth hath bubbles as the water has, it was not, at all events, the earth of railway-cars and conductors. His spirits when they left the body for a chair-person did not get into trains where "the breakman came in, took [illegible] and opened the stove door with it, peeped into the red-[illegible] Kitunan—a moment, grasped a solid chunk of wood from the [illegible] is open [illegible] it in cleverly." He would have been shocked [illegible] many of doings altogether.

* Bressant. By Julian Hawthorne. 2 vols. London: [illegible]

with the want of harmony when the spirit of the dying heroine, travelling after the hero for miles, found him in a railway-car with his feet up, resting on the seat in front of him that he had "reversed," and "leaving the telegraph wires to scud and dodge unnoticed." His exquisite taste too would have kept him from dealing in premonitions and presentiments so freely as his son, and whenever he dealt at all in the supernatural he would have taken care to cast such a haze over it as to leave it in doubt whether after all there might not be in each case some natural explanation. But we must leave our comparison between the father and the son, and turn to the story itself.

The plot of the story is, if a little complicated, at all events original, while for those who like a secret there is a secret kept up till nearly the end. We hesitate whether to begin our explanation with the hero Bressant, or with the father of the two heroines—for two there are—Professor Valeyon. It will perhaps be most convenient to follow the rule of *seniores priores*. The Professor then, who is by far the pleasantest and most natural character in the book, had in his early days a friend and a mistress. It was the old story. The friend proved false, and, by the help of falsehoods, convincing the girl—the daughter of a rich Southerner—that Valeyon was unfaithful to her, won her for his own bride. After a few years of wedded life she ran away from her husband, leaving with him their only child—a sickly boy. All her property had been settled upon her, and "it was only the event of her death intestate that could have given her husband the right to will it away at all." She made, however, no claim to it, but supported herself by keeping a boarding-house in a village, where many years later her former lover, now Professor Valeyon, who had also married, came to settle in his widowhood with his two daughters. The faithless friend had been doubly false, for he had been himself engaged at the very time that he robbed Valeyon of his love. He meets his old flame a few years after his marriage, and it is a suspicion of an intimacy existing between the two that chiefly led to his wife leaving him. This woman afterwards marries, we must add, "a wealthy old Knickerbocker" of the name of Vanderplanck. All these events are but briefly told, as they are supposed to have happened some twenty years or so before the story opens.

The first scene of the story, as indeed most of the scenes, are laid in Professor Valeyon's parsonage. We have the Professor himself thus pleasantly and humorously introduced to us:—

> Opposite the table stood a chair, straight-backed and severe, in which Professor Valeyon always sat when at work. He had a theory that it was not well to be too much at bodily ease when intellectually occupied. Directly behind the chair, upon the shelf of a book-case, stood a plaster cast of Shakespeare's face, the nose of which was most unaccountably darkened and polished. It is doubtful whether even the Professor himself could have cleared up the mystery of this deepened colour in the immortal bard's nose. But whoever, during those hours set apart by the old gentleman for solitary labour and meditation, had happened to peep in at the window, would ten to one have beheld him tilted thoughtfully back in his chair, abstractedly tweaking with the forefinger and thumb of his right hand the sacred feature in question. He had done it every day for many years past, and never once found himself out; and doubtless the great poet was by far too broad-minded ever to think of resenting the liberty, especially as it was only in his most thoughtful moments that the Professor meddled with him.

He has just received a letter from Mrs. Vanderplanck, in which she states that the faithless friend—if we knew his name it would save us from the charge of an almost Homeric use of epithets—has bequeathed to him the care of his only son. Treacherously though he had treated the Professor, yet he knew the generosity of his nature, and was sure, it would seem, that he could not but "feel a vital interest in the boy" as the son of his former friend and his old love. Following close upon the letter arrived the son, Bressant, the hero of the tale, "a very tall and broadly built young man, with a close brown beard and quick comprehensive eyes." The Professor, and the reader too, as soon as he gets any insight into the story, are convinced that he is the son of the faithless friend and of his wife, the present lodging-house keeper. About her name too, by the way, there is a mystery, and also indeed about the hero's. She is always called Abbie, as he is called Bressant, but whether Abbie and Bressant are Christian names or surnames, or a mixture of the two, as is once hinted, we never learn. Abbie, as soon as she sees Bressant, is convinced, from his strong likeness to his father, that he is her son, but for some reasons that we do not understand she does not speak out. Bressant's is a strange character, though we hardly like to say an unnatural character. "There was," as the Professor said,

> an uncertainty, in talking and associating with him, as to what he would do or say; an ignorance of what might be his principles and points of view; an impossibility of supposing him governed by common laws.

He was at first apparently utterly devoid of all sympathy, and, though he soon proved a too apt pupil, was ignorant of even a suspicion of love. He was ambitious, he was deaf, and he was a muscular Christian. He longed for the renown of a St. Paul or a Luther, and at first he seemed to have his body completely under the mastery of his mind. But the Professor had two daughters—one a perfect saint, the other by no means imperfect as a sinner. The Professor in his simplicity hopes that Bressant may learn gentleness from his daughters; the saint Sophie burns to guide him on the path to heaven, little suspecting that he may guide her on the path to love; while Cornelia, pure and innocent though she was when the story opens, is found to have a nature as capable of unrestrained passion as of treachery. Sophie, on Bressant's arrival, is confined to her room

by illness, and does not see him till after her elder sister Cornelia had left home on her first visit to New York and the great world. She does not in the least suspect that, utterly ignorant as Bressant and Cornelia had before been of love, and short though the time was that they were together, they had both taught and learnt a good deal. Had there been no Sophie, Bressant would have learnt a lesson of tenderness from Cornelia, and would have made a model husband and a good—perhaps a great—man. Had there been no Cornelia, Bressant would have learnt much the same lesson from Sophie, with much the same result. Unhappily, he does not see both the sisters at the same time; but having partly fallen in love with Cornelia, and made her wholly fall in love with him, he partly falls in love with Sophie, and makes her also wholly fall in love with him. In Cornelia's absence in the fashionable world he becomes Sophie's accepted lover, and the elder sister returns to find the marriage close at hand. But she does not return the same girl that she went, and in this sudden change there is much that is as disagreeable as it is, we believe, untrue to nature. The talk of society in New York and the literature which society reads must be indeed of a peculiarly vile and seductive kind, if a young girl of nineteen, of an innocent nature, brought up in a quiet parsonage, could get so quickly corrupted. She—who had been her sister's bosom friend—on her return home at once sets about seducing her sister's betrothed, and succeeds so well that a few days before the marriage is to take place an elopement between the two is arranged. Bressant meanwhile had found out that he was not Abbie's son, but that he was the child of shame, and that, though his father was her husband, his mother was her rival. He had not, therefore, any claim whatever to Abbie's money. He seems utterly corrupted, however, and means to run away with it at the same time as with Cornelia. A night or two before the day fixed for the wedding, there was a ball given. Sophie, who was not well enough to go to it, as it was winter and the snow was lying very deep, had sat up in her room trying on her wedding-dress. But as she walked up and down a "loose board creaked dismally." She sat down again, but here the author shall speak for himself, as, when we come to ominous creaks, we feel that we are on a subject where we are by no means at home:—

> She sat quite still, and perhaps fell into a light, half-waking slumber. A while afterwards, she suddenly started in her chair, her head raised, as if listening. The fire burnt as warmly as ever, but Sophie was trembling incontrollably, and her heart was beating most unmercifully. She walked quickly and blindly, with outstretched hands, to the window. This time the ominous board forbore to creak. Its omen was fulfilled.

She runs out in the snow in her wedding-dress and pursues her faithless lover. Sinking with fatigue, she calls out, "Bressant, Bressant!" "Either he had actually heard a faint echo of that unearthly cry" (and yet we must remember that he was very hard of hearing), "or his spiritual ear had taken cognisance of the call of Sophie's soul." He turns about and soon finds her, lying apparently lifeless in the snow. She is carried home, and is brought back to life only to leave it once more. Cornelia is stricken with remorse, and asks Sophie to tell her father all her cruel treachery and to ask for his forgiveness. Bressant disappears. He takes the train for New York, intending to go over to Europe with his money, and there, forgetting that he had "a mind, or a heart, or a soul," to live the life of a hog. Happily for him, he falls into a deep sleep, and Sophie into a trance. She wakes up with the knowledge that he will be back by noon. There were enormous difficulties in his way, for he was short of money, could not pay his railway fare, and had "to travel on foot and through the snow seventy-five miles of unknown roads." Besides this he had to start on an empty stomach, and could get nothing to eat on his way. But Sophie's spirit had made him a Christian, and he had made himself long ago muscular. He set off at a run, was taken a short cut over the fields by the spirit, and arrived as the clock struck twelve and Sophie passed away. Then the story closes, but Cornelia no doubt marries him.

Of all this folly about magnetism, or spiritualism, or mesmerism, as we find it variously termed, there is a great deal of clever and original description and good writing. We should not have been so greatly irritated with the second volume had it not been that the Cornelia and the Sophie of the first volume were too well drawn to make us view with any complacency the process of spoiling through which they were put. The Professor happily remains to the end the same simple and noble-minded man that he was in the beginning. Mr. Hawthorne must give us a story free from all presentiments and premonitions. In a dramatic point of view it is far more effective when a loss, like a thunderstorm, breaks on one without any warning. Surely we are much more affected when Romeo says, "My bosom's lord sits lightly in his throne," than when Cornelia in the sudden stopping of a watch given her by her lover sees—and with good reason too—something portentous. Mr. Hawthorne must learn a distrust too of big words. "Inception" and "predicate" and "imperatively necessary" and "mucilage" and "delegated" are all very well in their proper places, though they are a little awkward where they occur. As for "finer intuitions", with their "precision paralysed," or "an electric pulsation that seemed to pass through Cornelia's blood imbuing it with a powerful ichor," or "the infinitely elusive quality which is the very secret and necessity of its existence," the less we have of them the better. There are certain Yankeeisms also which might have been dropped in the English edition. Such phrases as "she don't know" and "don't it make" occur too frequently in the talk of people who are meant to be highly educated. In spite of all these drawbacks, there is still enough to make us hopeful that we shall once more have reason to rejoice whenever we hear that a new work is coming out written by one who bears the honoured name of Hawthorne.

THE OFFICIAL HISTORY OF THE LATE WAR.—THIRD SECTION.*

THE 6th of August was beyond all doubt by far the most important day of the great war which gave its birth to the new German Empire and its deathblow to the Empire of France. There was no critic in this or any other neutral country whose opinion was respected, that ventured to predict speedy, continuous, and complete success to either side before the news of the great events of that day were flashed over the world by the telegraph. Those among ourselves who had studied and admired the Prussian successes of 1866 were yet uncertain how far the loose, though ready, tactics which had then triumphed over the veteran leaders of Austria, commanding armies that knew nothing of the breechloader, could be relied on when opposed to a foe noted for victories won by loose order in days gone by, and now armed with a weapon which, by common report as well as in fact, might be rated above the needle-gun. The most hazardous prediction that was offered here was the remark that the French, if rushing into war with their old foes, would find in the Prussians of to-day rather the traditions of Leipzic and Waterloo than those of Auerstadt and Jena. As to Continental lookers-on, the general feeling of uncertainty as to the result of the coming conflict may be fairly summed up in the words attributed to Baron Kuhn when pressed for his opinion:—"If I must choose, I would prefer to be behind the French army of the two; but I had much rather keep out of the war altogether."

All such doubts, however well grounded before, vanished when the 6th of August had come and gone. To say that MacMahon had been terribly defeated by superior numbers at Woerth, what was it but to acknowledge, in other words, that the German strategy had shown its superiority of conception at the very outset of the campaign? To state that Frossard's corps had been attacked and forced from a position of chosen strength near Forbach by troops which, even in the first hasty reports, were plainly but detachments of the three German corps nearest to him, what was it but a proof that neither the new weapon of the French, nor their supposed tactical readiness for sudden action, was proof against the vehement yet well-directed attacks in flank which had proved so fatal to the Austrians four years before? And the world knew beforehand that the third great military element, the power of organization, had been already developed by Prussia to such an extent as to make her rival for military fame deeply conscious of inferiority in this respect. Marshal Niel's half-abortive measures of reform, and the legislative debates in which they had been criticized and emasculated, had brought this fact prominently forward, as acknowledged by France herself. There was nothing left that could reverse the verdict delivered simultaneously at Woerth and Forbach. Admirers of Germany could only wonder where her new career of victory would stop. Friends of France could at the most re-echo the Emperor's own desponding words, "All may yet be saved." The great events of this day deserve therefore ample treatment in their record; and we need not wonder that the new part of Count Moltke's story is devoted absolutely to them.

Woerth has the place of honour in the volume; possibly because the heir to the new throne of Germany there first led the contingents of her States into united action. Not for its greater magnitude certainly; for, although the chapters on the two battles divide the Part almost exactly, the two odd pages are given to Forbach (or, as the victors have named it, Spicheren), which indeed was the more complicated action, on the German side at least, though so much less in dimensions than that fought by the Crown Prince. Following the same order, we shall look at the latter first, not with a view to pursuing the official writer throughout his tale, but rather to glean from it such new light as the greater opportunities and comparatively late date of the Official History throw over its phases.

The first important point for notice is the clear evidence that the battle was not premeditated—for that day at least—by the German Staff. This has been long known positively of Spicheren; but, though stated also of Woerth, it is only now that definite grounds can be given for the assertion. These we have at the opening page, where the orders issued on the evening before by the Crown Prince to his commanders of corps are repeated in detail, and show that nothing beyond a change of front was designed. Indeed the V^th^ Corps and II^nd^ Bavarian, as well as the 4th Cavalry Division (the 2nd had not yet joined the army), were directed to remain stationary; the Bavarians, however, being to the north of the other, making front to the westward, with the special view of observing the country towards Bitsche, from which MacMahon might be drawing support. The XI^th^ Corps, pivoting on the V^th^, was to bring its left shoulders round and advance to the Sauer, which would then cover the three. This muddy stream, unimportant to the eye of the ordinary traveller, here runs from north to south in a flat valley of meadows with steep sides, making

* *Der deutsch-französische Krieg in* 1870-71. Herausgegeben von der kriegsgeschichtlichen Abtheilung des grossen Generalstabes. [illegible]

tactical feature. The French were known to be beyond it in force, apparently on the defensive. Their object was naturally and rightly conjectured to be the covering of the railroad, running just within the then French frontier, from Hagueuau to Bitsche, which is conducted into the Vosges along another valley of less depth behind the hills which rise up on the west side of the Sauer. But though MacMahon's wishes were thus rightly divined, his means of executing them were much overrated. The Germans might have discovered indeed that Douay's corps still lingered uselessly about Belfort; but they could not know that De Failly would retain his loitering about Bitsche whilst the comrade he was ordered to support was being crushed half a day's march from him. They believed that both these generals had already joined MacMahon with their commands, the truth being that only Conseil-Dumesnil's division of Douay's was with the Marshal; and they were not disposed, therefore, to risk an attack on the enemy in his chosen position without giving time for bringing up the First Bavarians and Werder's Corps of Baden and Wurtemberg troops, the former of which was considerably to the north or rear of the army, the latter to the east, having moved up the Rhine by the roads near that river. Another good cause for delay was the knowledge that the VI^th^ Prussian Corps, which was to complete the mass of the Third Army, was just passing through Landau, and was sending its leading division on so rapidly that it would connect itself with the Crown Prince's right rear the next day.

But here we must join decided issue with the German writer on one important point. The position of MacMahon was not, in our judgment, nearly so strong as he represents it; certainly it does not deserve the character ascribed to it of being so formidable that "its holder might even reckon on a success over a far superior enemy." It is admirably described in its details. But the fact that the hills before Froeschwiller and Elsasshausen are "of such an undulating and wooded a character as to favour the employment of strong swarms of skirmishers," is surely a very bad feature in the key-point of a defensive position. We go further, and state boldly that any one who stands on those hills and looks down upon the little town of Woerth below (which here almost fills the Sauer valley), and, observing first how the wooded slopes continue into its very enclosures, then views the opposite and more open steeps down which the Germans came, will not hesitate to declare that MacMahon never could have meant to hold such a position on the strict defensive at all. Had he done so, his judgment as a tactician would stand condemned for ever. No; the French Marshal plainly thought that the enclosures would serve to cover his own advance admirably. He forgot that the Germans had become as much tactically quicker than their foes as Napoleon's veterans of 1806 were than the battalions of Brunswick which they routed at Auerstadt and Jena. Forced into a sudden action by the skirmishing of the eager German troops, notably by those of old Hartmann's II^nd^ Bavarians first, and later of the V^th^ Prussians, who suddenly called on their allies for aid just as Hartmann, in obedience to positive orders of the Crown Prince, had withdrawn them from the fight, MacMahon must have seen with astonishment the rapidity with which his foes availed themselves of the cover he had left in front of his centre. His mitrailleurs had no sooner been driven off by the concentrated fire of the guns of the V^th^ Corps, supported by those of the XI^th^, than "soon after 10 A.M." General Kirchbach gave the word to push the infantry in and through Woerth; and, once planted there, they won their way slowly but surely upwards into the French line of defence. The cover before MacMahon's centre, in fact, formed the weak point, instead of the strength, of his position. Strange to tell, to those who do not understand the importance of a staff officer's position when a man fills it who is equal to its highest responsibilities, the concentration of the artillery which paved the way to the first German success, and the whole of the dispositions which preluded the attack through Woerth, are credited with the utmost distinctness, not to the Prince, nor to any of his generals, but to Colonel von Esch, the Chief of Staff to the V^th^ Corps, who carried out the necessary arrangements on his own responsibility. That the victory was so complete was due no doubt to the flank attacks, and especially that made from the south on the French left, to which MacMahon, in his first hasty report, ascribed his rout. But the first onset of the V^th^ Corps, well supported as it afterwards was by the XI^th^, had proved fatal to the real tenure of his line of defence on the Froeschwiller hills, long before the attacking of his line at both extremities destroyed all hope of his holding the strong villages on its crest.

Cavalry officers who desire to learn what their arm cannot do, and ought not to attempt to do, should study the details of Michel's and Bonnemain's famous and unhappy charges, made in mad hope of wresting Morsbronn and Elsasshausen from the swarming infantry that had seized them. The official narrator has thrown his whole strength into his task at this point, and offers to a noble arm the most practical and instructive lesson yet written on its action in modern battle. The reader will find that the horsemen, though showing all the desperate valour of the old *furia francese*, never reached their enemies but once, when they broke an angle of a company of engineers which had thrown itself into the foremost line of infantry, and were even there so utterly shattered by the deadly fire of the breechloaders as to be thrown back in confusion and left without any real gain. To the same hopeless errors we [illegible] cavalry against infantry on ground not perfectly open, [illegible] Rituals. The absence of the 4th Division, might be ascribed, of the [illegible] is open [illegible] aright, the ease with which MacMahon's [illegible] London [illegible] way of doing

shattered battalions withdrew into the hills when their positi[illegible] was wrested from them. For the foot of the Vosges is by [illegible] means a hunting country; and the chassepôts were not [illegible] thrown away, nor their holders left without cartridges.

If we hurry on to speak of Spicheren within our brief limits of space, it is but to study a single question—that of the means by which the German infantry carried the Rother Berg, or steep and bare tongue-shaped point of the hills which all visitors will recollect as projecting prominently forward in the direction of Saarbruck, and which has been lately crowned by a monument commemorating the achievement. The facts that it is difficult to climb its slopes at all without using one's hands, and that the French had thrown up musketry trenches along its crest, make the feat appear a perfect marvel at first sight. The German narrative, however, brings the gradual steps of the process into clear light, and it needs but little additional explanation to show how the success was won. The plateau of Spicheren, it should be pointed out, though apparently retreating nearly on a level from the heights before it, in reality keeps still sloping slightly upward; so that the French batteries were fully exposed to the fire of the German guns on the lower ground before it. We see, therefore, these batteries first completely overpowered and driven off by superior fire. Next, those of Berge's division, which had been planted lower down towards the French left to flank the heights, were in their turn forced to retire before superior fire. The French infantry were now left to hold the heights alone, and the very steepness of these prevented their defenders in their trenches being aware of the sudden attack which, about 3 P.M., General Francois, by Kamcke's orders, led direct up the slope; so that the German skirmishers presently gaining the trenches, "the Chasseurs, apparently surprised, were driven off with little resistance, retiring behind a swell of the ground further on." The sudden ending of the slope at the plateau would naturally afford a single line of men good cover, even if the trenches left by the French had not aided in the object. Francois had with him only five companies; but it was not thenceforward difficult for them, crouching under the crest of the hill, to hold their position against the scattered firing along the plateau. What they had really to dread in their precarious hold was a bold counter-charge by the enemy for the possession of his lost trenches. And when this came presently from the dangerous point, the edge of the wood which the French held close to the Rother Berg on the German left flank, Francois freely offered his life in leading on his men to repulse it; and though the companies after his fall gained no ground, they had checked the French, and were no longer so seriously threatened. It was much later, however, when the wood itself was carried and their line made secure; but meanwhile their dropping fire kept the French back from the edge of the plateau, and made it possible to bring up the guns which just before dark appeared on the height to be greeted by the hurrahs of the long-tried infantry, and to decide Frossard's retreat.

We have dwelt on but a single episode of this remarkable action. There are many others only less interesting than this famous carrying of the hill, thus already made historic, which has been selected by us as the most prominent. The reader of history has seldom had a battle so fully and yet so graphically described as this of Spicheren in the book before us. The tactician will find in it such ample materials for study that, if nothing else of the war were to be written, he might gather here lessons as valuable on the use of infantry and artillery as that of Woerth offers on the more showy arm. The careful critic will hardly find a superfluous sentence in the volume, and will acknowledge that the writer has taken almost as much pains to do justice to the efforts of the French as to illustrate the superiority of the fighting which triumphed over them.

SIR CHARLES GRANDISON.*

WE once heard a lady—in her day a distinguished letter-writer—tell how, some fifty years ago, paying a visit in her school-girl days, she came upon a copy of *Sir Charles Grandison*, at that time considered as much a book of the past as it is now. She began to read, and, becoming absorbed in the trials of the heroine, sat in her chamber entranced and unconscious of the flying hours—of the clock striking twelve o'clock, one o'clock, two o'clock—till down upon the page containing the elaborately-led-up-to crisis alighted a sprawling and prodigious spider, seeming to cover the whole area. The shock and jar upon her excited nerves was too much; that night she read no more, but retreated shuddering and shivering to bed, leaving the *denouement* for the morrow. In such reading the spirit of an author is caught unconsciously; it developed in this case a narrative style of letter-writing, so easy and graphic, so welcome to the family circle, that those who recall it feel that society pays a real price for the substantial conveniences of our present system of postage which has knocked such letter-writing on the head. Not that under any circumstances a revival of Richardson could influence style now. We have drifted too far from his mode both of viewing and telling things. His works are interesting as a study to the critic, and can still awaken enthusiasm in intelligent readers living in abundant leisure and scarcity of books, like those residents at the Hills one hot season to whom Macaulay introduced *Clarissa*; but it is hopeless to expect the novel-reader proper to

* *Sir Charles Grandison.* A New and Abridged Edition, by Mary Howitt. London: Routledge & Sons. 1873.

by [illegible] had himself nowadays into *Sir Charles Grandison* as he once She [illegible] And if we say this of the complete work, what shall we say Br[illegible] abridgment? An abridgment of a novel!

If Dialogues of the Dead were in fashion, Richardson and Madlle. de Scudéry might be set to discuss the comparative degrees of regret or torture which the shade of an author feels under posterity's utter neglect or slashing abridgment. They would be in a condition to decide whether it is least endurable to die with the century in which your works have played their part, or to see them reproduced in the form of an abstract; your choicest and most characteristic passages struck out as immaterial to the story, the bare comings and goings of the personages connected by a proposition or a conjunction, or a brief sentence of modern structure and wording. It is bad enough to be forgotten, but we own that our heart bleeds for Richardson under some of the omissions we find in the present volume. We have no objection to passages and scenes being selected from unmanageably prolix works of a past date; but let those scenes stand as the author wrote them. A work of imagination cut and docked at every turn—we speak of certain early scenes which we have compared—every page and every sentence subject to excision at the will of the operator, cannot come to good. The spirit of abridgment gets the better of every other consideration. It is not in nature to choose with discretion. Assume that the story must be told, what is left for elimination but the details, and what is a novel that is worth reading at all without its details? With all respect for Mrs. Howitt, there are occasions when we cannot believe that she is an admirer of Richardson, or that her girlhood was ever under his spell. Sometimes it seems as if she had made her first acquaintance with him pen in hand, prompt to strike out every superfluous sentence; in policeman-fashion nudging each character in turn to move on. It is vain to attempt to read Richardson in a hurry, to get an idea of him at the speed at which people now rush through novels. The readers and master writers of an age understand one another. He knew that people would not grudge him their time, as he did not grudge them his almost painful elaboration. A broad, carefully laid foundation being one of his methods, one felt more like living with his characters (as we judge by contemporary comments) than reading of them. People got acquainted with them by degrees. This relation cannot be revived. It is no such great matter; it is by no means essential that the present generation should read *Sir Charles Grandison*. Only let them not think they are reading him to advantage in reading an abridgment, where the terrors and passion of the heroine in her extremity, and the vivacity of Charlotte Grandison, are stinted watch in hand, and measured out by the space they take up in the page. All who know anything of the story will recall the circumstances under which hero and heroine meet, and how he rescues her from a compulsory marriage. The whole narrative of the abduction is given with uncommon life and truth. The scenes are in the author's most animated manner, nor is there anything to offend a scrupulous taste. He has the distinctest idea of every actor. All move and energize before him—snuffling parson, insolent lover, determined heroine. Considering the circumstances, and that they were quite within the bounds of probability when he wrote, Richardson ought to be allowed his own pace; yet even here the niceties of truth are sacrificed to despatch. It is not a question of shortening a prosy discussion on any of the points of prudence or morality with which the work abounds; it is the essence of the story, the quality that makes it memorable as a fiction, which is thus handled. It is not doing justice to a scene to give only its climax. But, as an instance of the method of abridgment, we quote one original passage which is abbreviated in the copy before us into five lines. Perhaps the part which precedes the appearance of the hero is regarded as merely introductory and to be made short work of, but it is one of the most effective points of the story. In escaping from Sir Hargrave the heroine gets caught in the doorway:—

"[illegible] in shutting the woman out squeezed me dreadfully as I was [illegible]nt, and my nose gushed out with blood. I screamed; he seemed frig[illegible]d; but instantly recovering myself, "So, so, you have done your wor[illegible] you have killed me, I hope." I was out of breath, my stomach was ver[illegible] much pressed, and one of my arms was bruised. I have the mark still; for he clapt to the door with violence, not knowing, to do him justice, that I was so forward in the doorway.

I was in dreadful pain. I talked half wildly, I remember. I threw myself in a chair. "So, so you have killed me, I hope—well now I hope—I hope you are satisfied; now may you moan over the poor creature you have destroyed"; for he expressed great tenderness and consternation; and I for my part felt such pains in my bosom that, never having felt such before, I really thought I was bruised to death; repeating my foolish "So, so, but I forgive you," said I, "only sir, call to the gentlewomen, sir. Retire, sir. Let me have my own sex only about me." My head swam; my eyes failed me, and I fainted quite away."

In the abridged version of this passage poor Harriet is not allowed to say a word for herself. All is compressed into "I talked half wildly." And yet we think she expresses herself not unnaturally for a pious but indignant beauty, and prettily too. It is probably a scruple of propriety which leaves the reader to suppose that a bruise in the arm made her nose bleed, while the exigencies of curtailment cut out the especially Richardsonian trait which follows, when the villain, panic-struck and really thinking her dying, secures the bloody handkerchief and thrusts it into the fire. "If she did not recover, that should not appear against him." The passion of Richardson's bad men never carries them beyond the predominance of egotism and selfishness.

Nor, considering how very much of real dull reading is left behind—the sort of discussion which the reader alike skips in the original and the abridged editions—can we understand the principle which strikes out Charlotte Grandison's views on the sort of husband for a superior woman. A certain Lord D. has been proposed to Miss Byron, who, having once seen the "Man of men," is more than indifferent to all others. Her friend proffers her advice:—

"Well, but now I will tell you, without punishing your curiosity further, what Lord D.'s character is. He is as sober a man as most of the young nobility. His fortune is great. In sense he neither abounds nor is wanting; and that class of men, take my word for it, are the best qualified of all others to make good husbands to women of superior talents. They know just enough to admire in her what they have not in *themselves*. If a woman has prudence enough to give consequence to such a one before folks, and will behave as if she thought him her superior in understanding, she will be able to make her own will a law to him; by the way of '*I will, shall I?*'—or, '*If you please*, my dear, I will do—*what I think fit*.' But a fool and a wit are the extreme points and equally unmanageable; and now tell me, Harriet, what can be your motive for refusing such a man as this?"

HARRIET.—"I wish, my dear, you would not talk to me of these men. I am sick of them all. Sir Hargrave has cured me ——"

MISS G.—"You fib, my dear; but did you ever see Lord D.?"

HARRIET.—"No, indeed."

All this is condensed into "while we were thus talking," along with a good deal of flutterings and palpitations and heart analysis, which to the abridger might well seem superfluous. But if *Sir Charles Grandison* is not a love story, it is nothing readable. The interest lies in the love, often the despairing love, of two heroines, who only represent the enthusiasm of the sex for a good man when they see him set off with all the attraction of circumstances, of person, mind, and character, and that "air of vivacity and intrepidity," that intelligence, "than which a sunbeam is not more penetrating." No *reader*, masculine or feminine, is in love with Sir Charles—that must, we think, have been always out of the question; but the passion which animates the performers in the scene is delineated with knowledge and insight into the female heart. It was the one speciality on which Richardson piqued himself—his great qualification for his w[illegible] his life-long study. At thirteen years old he was, he tells us, confidant of all the superior young women of his acquaintance; wrote their letters for them, understood when anger was feigned and the chider or repulser was overflowing with affection and only dreading to be taken at her word, and could satisfy the requirements of tenderness which could not tell him what to write, but "(her heart on her lips) you cannot write too kindly." We have not Richardson, therefore, if too short work is made of the trepidations, hopes, fears, suspense, pique, fretfulness, devotion, and perpetual struggles and self-questionings of the virtuous female bosom torn between self-respect and passion founded on esteem.

No abridgment can mend the manners of the book; rather it brings out more prominently their formality, the bowings, paradings, and endless civilities. This defect, due in part to want of acquaintance with the fashionable world in which he placed his characters, was one ground for the violent irritation which Horace Walpole shows against Richardson—an irritation which culminates when he finds the Paris world full of his praises, and supplementing their own dulness (as compared to old times) with that of the popular English novelist whose fame he cannot get away from. But even Richardson's warmest admirers have to make allowances on this score. Mrs. Delany accounts for the want of fine breeding by his having taken a bad model. "Don commends Miss Mulso's (afterwards Mrs. Chapone) letters, but she does not so well like the young woman; that is, she admires her sense and ingenuity, but thinks her only *second rate* as to *politeness of manners*, and that Richardson's high *admiration of her* has made him take her as '*a model* for his genteel characters; and that is the reason they *are not* so really polished as he thinks them to be." We are not sure, however, that these questionable high-polite manners which never could have existed among human beings do not help Richardson's characters to that permanent niche in our memory which they undoubtedly hold when an acquaintance with them is formed under the requisite conditions. Whatever else they are, they are realities with the author. If the reader starts with sympathies in accord with him, and patience to follow his lead, he can no more forget Sir Charles, or Sir Hargrave, or Uncle Selby, or the revered grandmama, or Harriet, or Lady G., than he can his own uncles, and aunts, and cousins, however keenly alive he may be to their imperfections. The story is not so powerful as *Clarissa*, but its characters have the same limpet grasp. But these necessary conditions grow rarer as the years pass by. The bookshelves to which boys and girls have access cease to hold original ten-volume editions, or chance numbers of the *Novelist's Magazine*, clothed in that forbidding brown leather in which George Eliot invests the Sunday books of the last century, "which always opened at one place," but which, once opened on *Sir Charles Grandison* by a sufficiently large and patient curiosity, discovered a new and quaint world where romance and formality, violent wrong and fastidious scruple, seemed to divide life between them. The inroad of new stories and cheap literature with smart outsides elbows these venerable relics out of their snug and secret corners. They have had their day of popularity, and external resemblance to their newer rivals will scarcely bring it back again. And yet the thanks of the public are due to the publisher for his attempt. If we quarrel with abridgments, we admit the [illegible] possibility of reproducing the entire work, and the almost [illegible] impossibility of satisfying our taste and judgment in th[illegible] of a task at once delicate, difficult, and irksome; [illegible] also that many a scene as it is left by the c[illegible] long enough, and leaves nothing to be [illegible]

room for large relics; it is only gems which fill a little space that last from age to age. Colossal labours of all kinds but the very highest have to give place to newer feats of giant enterprise; their authors must be contented, if they would be known to posterity at all, to be represented incomplete, and by specimens more or less fragmentary.

CAMPBELL'S TRANSLATION OF SOPHOCLES.*

IN translations from the ancient classical poets success naturally depends upon nicely balanced proportions of scholarship and poetic talent. We could name some who possess the latter gift but have proved themselves more or less unfit to reproduce the great masterpieces of ancient poetry, simply because their education had not included initiation in construing according to the rules of syntax; and the bald and barren results of attempting to turn Greek or Latin poets into English without poetical taste or cultivation are equally deplorable. As examples of translations which are the offspring of the harmonious union of both qualifications, we might mention Conington's Æneid or Horace, Calverley's Theocritus, and two or three other notable performances within the last ten years, amongst which we should rank, though its claims to scholarship are more solid than ostentatious, the late Lord Derby's Iliad. But would it be so easy to point out a version of either of the Greek dramatists which is admitted by the agreement of competent judges to be of this character? Mr. Plumptre's Sophocles was certainly not such a version at its first issue, though we admit that in its revised and improved form its not infrequent faults of translation are corrected, and the translator is complaisant enough to attempt [illegible] the proof of his poetic gifts by affording readers a choice of rhyme [illegible] unrhyme in the choruses, which are turned one way in the [illegible]t and another in the appendix. His Æschylus, which was [illegible]ished later, scarcely satisfies our ideal, though doubtless [illegible] stat[illegible] taking and meritorious work has been expended upon it. [illegible] dow[illegible]ave now, however, a new translator of Sophocles, whose [illegible]ifications may be estimated by the manner in which he has [illegible]ccomplished well nigh one-half of his projected task. Professor [illegible]ampbell of St. Andrews published at the close of 1871, or the [illegible]eginning of 1872, the first volume of a commentary on Sophocles, the valuable features of which we were compelled by the press of other classical subjects reluctantly to defer noticing until the completion of the whole work. It may suffice to say here that in that commentary the exegesis of the text is ably and conscientiously performed, whilst abundant evidence is given in the introduction, prolegomena, and foot-notes, that the Professor has brought to bear upon his Sophocles a large amount of familiarity with modern as well as with ancient poetry and literature; so much so that pleasant comparisons of "old and new" are a noteworthy speciality of the edition. After a brief interval, however, he has now followed up his commentary by an essay in translation. Not indeed that, except in the case of the *Antigone*, he goes over the same ground again. The tragic tale of Œdipus formed the matter of the first volume of his Greek text and notes. For a first taste of his poetic powers applied to translation he offers, in happy conjunction, three Sophoclean heroines, Antigone, Electra, and (by taking license to substitute the name of the chief character in the *Trachiniæ* for the gentile name of the Chorus) Deianira, or the death of Hercules. The juxtaposition of names on the title-page is attractive, and those who take up this instalment of the latest Sophocles in English will find the promise not belied. Commendably free from introductory prefaces, and from confusing notes to explain why this or that interpretation is preferred or rejected, this version represents a practised commentator's well-considered transcript. Moreover, it is a rendering which, whilst literal enough to plead the Greek text for the warranty of every line of the English, nevertheless reads as smoothly as if it were an original work composed by one who was familiar with the best models of his country's dramatic literature. This is eminently the case with the dramatic blank verse which represents the iambics, or larger portion of each play. But it is conspicuous, too, in the management of the choral odes, which, mostly in rhymed lyric measures, reproduce gracefully and effectively the brilliant strains of the Sophoclean lyre. And the impression left upon our minds after a strict comparison of any one of these Englished choruses with the Greek original is, generally speaking, this—that no thought, and almost no word, certainly no weighty word, of the ancient master, is left without its equivalent in Mr. Campbell's copy, and that the English reader is put as nearly in the place of an Athenian listener and spectator as a fellow-feeling between the poet and his translator, and a conscientious ideal of translation, can compass.

Amidst such a choice of fine choruses as these three plays offer, it would be puzzling to select the very best in order to exhibit the justice done to the Greek text by its translator. But the very first strophe of the first chorus in the *Antigone* may suffice (*Antig.* 100 foll. ἀκτὶς ἀελίου, κ.τ.λ.):—

> O fairest beam
> That ever gilded Thebe's towers with light!
> Thou camest to our waiting sight,
> Eye of the Golden Day,
> What time the Sun-God glanced on Dirce's stream,
> And spurred to faster flight
> The Argive on his headlong way.
> He rose in proud array,
> With snow-white panoply on eagle wing,
> Ruin to our land to bring
> In Polynices' dubious cause addressed,
> With many a shield and many a crest,
> Shrilling sharp menace from his breast.
> Then stooped above the domes,
> With lust of carnage fired,
> And, baring teeth of serried spears,
> Yawned wide around the gates that guard our homes,
> But went, or e'er his hungry chaps had tired
> On Theban flesh, or e'er the Fire-God fierce,
> Seizing our sacred town,
> Had smirched and rent her battlemented crown.

Here and there it may be said that the chief expressions and images of the Greek have been, so to speak, shuffled, so as to form somewhat new combinations and collocations, but the result of the whole representation is to enhance the spirit and life of the copy, without any appreciable sacrifice of the original effect. The last lines quoted admirably realize the very personifications and poetic objects which Sophocles first conceived and gave birth to in wrapt poetic vision. The remainder of the same chorus is equally well done, and so is the third chorus in this play, in which occurs the comparison of troubles accumulating upon a doomed family with "the briny surge"—

> That Thracian tempests urge,
> The big wave ever gathering more and more,
> Runs o'er the darkness of the deep,
> And with all-searching sweep
> Uprolls the storm-heap'd tangle on the shore,
> While cliff to beaten cliff resounds with sullen roar.

We are not sure that Mr. Campbell's version of the chorus which exalts the versatility of man's genius (πολλὰ τὰ δεινά, κ.τ.λ. 332-83 *Antig.*) is so great a success, not simply because it is unrhymed, and so an exception to his general rule, but because it is wrought into a too uniform series of long lines, which do not resemble the metrical form and spirit of the original. We like Mr. Plumptre's rhymed stanzas better here. It is, however, with a right instinct that the translator has sought to give variety to his choral metres, and has avoided any predominant type. That one which precedes the climax of the *Antigone* and the burying alive of its heroine (ἴτλα καὶ Δανάας, κ.τ.λ. 945, &c.) is very distinct, and leaves a different remembrance from the short and beautiful chorus a little before it, which has resistless love for its theme. The only fault to be found with this is that it does not to our apprehension give any equivalent for the variously read and explained line, Ἔρως ὃς ἐν κτήμασι πίπτεις.

But, not to dilate on the choruses, and to pass with a jump to the *Trachiniæ*, or, as it is here called, *Deianira*, we will choose from among the many spirited and effective bits of lyric translation which it contains a stave or two of the chorus which commemorates the encounter between the river-god Achelous and Hercules, as suitors for the trembling Deianira:—

> One was a river bold,
> Horn-crowned with tramp fourfold,
> Bull Achelous from the isles o' the main:
> And one from Bacchus' town,
> Own son of Zeus, came down,
> With brandished mace, bent bow, and lances twain.
>
> Who then in battle brunt
> Together, front to front,
> Hurled, eager both to win the beauteous prize:
> And Cypris mid the fray
> Alone, that dreadful day,
> Sat umpire, *holding promise in her eyes.*
>
> Then clashed the fist, then clanged the bow,
> Then horns gave crashing blow for blow
> Whilst, as they clung,
> *The twining hip-throw each essay,*
> And hurtling foreheads' fearful play,
> And groans from both were wrung.

Especially worthy of notice in the extract just given are the renderings of the epithet εὔλεκτρος as applied to Venus at [illegible] juncture, and of the somewhat puzzling wrestling feat in [illegible] ἀμφίπλεκτοι κλίμακες. Turning to the new edition of [illegible]iendt's Sophoclean Lexicon by Genthe, we find of εὔλεκτρος as used here that it is, in grammarians' phrase, "factitivè dictum," and it is in the very spirit of this view that the translation makes the umpire goddess "hold the promise" of happy wedlock "in her eyes" that watch the issue. Mr. Plumptre more vaguely translates "fair source of marriage joy," and does not so closely link the force of the epithet with the situation. Mr. Campbell's equivalent for ἀμφίπλεκτοι κλίμακες, a pregnant and hard kind of expression, is the result of a comparison of the meaning of the separate words and the light thrown upon them by commentators as well as by Ovid, who, in *Met.* ix. 51, has, as it were, given his own interpretation of the expression. Mr. Plumptre simply contents himself with "limbs intertwined with limbs." On occasions there may be cause for going along with this more prosaic translator, as where he limits himself to calling Ἄρτεμιν Ὀρτυγίαν (*Trach.* 213) "Ortygian Artemis," and not, as Mr. Campbell does, for what reason we find it hard to conceive, "Artemis, huntress of Ephesus' land." In the same play, verse 327, we think Mr. Plumptre's version of

> ἐξ ὄρους πάραν
> διήνεμον λίλαιον

safer than Mr. Campbell's. The latter, taking διήνεμος in the sense of one scholiast as "vastata et quasi perflata ventis," renders it "From the day she left her *war-swept* home"; and there is no

---

* *The Dramas of Sophocles: Antigone, Electra, Deianira.* Translated into English Verse by Lewis Campbell, M.A., LL.D., Professor of Greek in the University of St. Andrews. Edinburgh and London: William Black[illegible] altoge[illegible]

doubt the epithet so understood is highly poetic. But there is not, that we are aware of, any authority for such interpretation; whereas there is ground for accepting the simpler theory that δάημων is a synonym of the epic ἠνεμόεσσαν, which the scholiast propounds, and which Hermann and Ellendt approve. Both these take it to imply a high situation, and it is in this sense that Mr. Plumptre has translated:—

> She weeps and weeps, since first she left her home,
> Where all the winds sweep wildly.

If we turn to the more everyday level of the speeches and dialogue of these plays, couched for the most part in iambics in the original, no little credit will be found due to Mr. Campbell for the skill and clear wit with which he has perceived the mind of Sophocles, and brightened particular bits of detail so as to relieve them of that air of matter-of-fact which would cling to them in the hands of a perfunctory translator. It is here that his labour and pains as a commentator stand him in great stead. We will take a couple of lines from the first speech of the watchman in reference to the insubordinate act of Antigone. Like his fellows in Greek tragedy, he beats long about the bush, and is careful to tease his wrathful and imperious listener by irrelevant descriptions of his own mental processes. Here is a sample:—

> πολλὰς γὰρ ἔσχον φροντίδων ἐπιστάσεις
> ὁδοῖς κυκλῶν ἐμαυτὸν εἰς ἀναστροφήν.—vv. 225-6.

Mr. Campbell catches the spirit and life of the Greek words, and not merely their verbal force and equivalent in his English:—

> My thoughts
> Cried "halt" unto me ever as I came,
> And wheeled me to return.

A little further on in the same play occurs a wrangle in monostichs between Creon and this same watchman, in one part of which they play, after a dramatic fashion, upon a particular word, δοκεῖν. The watchman says:—

> ἢ δεινόν, ᾧ δοκεῖ γε καὶ ψευδῆ δοκεῖν.

And Creon answers:—

> κόμψευε νῦν τὴν δίκαν.

Here is Mr. Campbell's rendering:—

> Watchm. Pity so *clear* a mind should *clearly* err!
> Creon. Gloze now on *clearness*. But unless ye show
> The doer, without glozing ye shall tell,
> Craven advantage worketh clearly bane.

We cannot, however, commend this general fidelity to the spirit as well as the letter of Sophocles without making a reservation as to one or two places where the out-slipping of a word or two appears to blunt the edge of the translation. The instance which most readily occurs to us is where Antigone, at the end of one of her speeches, insinuates that Creon is not competent to decide the question of the wisdom or folly of her disobedience. She says:—

> σοὶ δ' εἰ δυκῶ νῦν μῶρα δρῶσα τυγχάνειν,
> σχεδόν τι μώρῳ μωρίαν ὀφλισκάνω.—469-70.

In the second of these lines σχεδόν τι serves to qualify the rudeness of Antigone's imputation, and interposes itself between a broad hint and a downright "You're another." In Ellendt it is given as equivalent to "quodam modo." By stifling this qualification of the words μώρῳ μωρίαν, the translator makes the retort of the heroine a trifle unmaidenly, *e.g.*:—

> And if thou think'st me foolish who act thus,
> I can endure that judgment from a fool.

We have left ourselves no space to illustrate one of the chief excellences of this translation, the skill and coherence and good general effect of the descriptive passages and speeches as wholes. Had we been able to do so, we could have quoted without fear of controversy the speech in which Tiresias (*Antig.* 998-1012) details the unfavourable results of his divining processes, as rendered into English with a dignity befitting the subject, and decidedly above the level prose of ordinary iambic lines. Or we might have cited the wonderful description of the fabricated death of Orestes in a chariot-race at Delphi, from the *Electra*. Taken side by side with Lord Lytton's version of the same, Mr. Campbell's rendering will be found quite as [illegible] much more faithful. In the *Trachiniæ*, Deianira's [illegible] she has despatched the poisoned garment, and [illegible] of the tortures to which it reduced his hero sire, [illegible] kill in description; and we could not wish to [illegible] anything from the version which he has given [illegible] roine, Deianira, is not altogether so attractive [illegible] nd the pathos with which the stories of [illegible] delineated by Sophocles, are instinct, will [illegible] plays more readers and admirers than [illegible] l three stories and their treatment by [illegible] re become more generally familiar [illegible] Clifton Collins's sketch of Sopho- [illegible] f *Ancient Classics for English* [illegible] sant and clever introduction [illegible] more of the Sophoclean drama, [illegible] g[illegible] t desire through the Greek text, [illegible] in recommending Mr. Campbell's versions [illegible] hat have yet appeared in English.

INNOCENT.*

HAD an unknown author written this story of the young lady whose portrait has so long stared at us from all the boardings of London, we should have thought it an earnest of future success, if not itself up to the mark. But as the work of Mrs. Oliphant it demands a higher consideration, and deserves a more severe judgment. Mrs. Oliphant has long been one of our favourite authors, and we have gladly welcomed her books as in their degree literary treasures amongst the flood of rubbish which silly women and enterprising publishers pour out with such cynical persistency on the world. We expected that she would always give us true art and honest painstaking labour, and that she would never let herself be led astray from the higher objects of her craft by the baneful temptation of immediate success. We counted her as almost a younger George Eliot in her way; and we credited her with something of the same charm as that which gave the author of *Wives and Daughters* her supremacy among the more purely feminine writers. We believed in her; and we hoped as much as we believed. But she has disappointed us. That temptation of immediate success, and striking while the iron is hot, which has ruined so many, has had its evil influence over her; and one by one her books have got weaker, more weary, more hurried, until now we have come to her latest, *Innocent*, which is as far below the worth of *May* as *May* itself was below Mrs. Oliphant's possibilities.

Innocent is perhaps more a character novel than a story of circumstances, in spite of its two sensational episodes of a quasi-murder and the trial for her life of a beautiful young lady; and Mrs. Oliphant's *forte* has ever been in character. She is ge[illegible]rally lifelike, and always distinct, and has her types [illegible] defined in her own mind. Not even Mr. Trollo[illegible] surpasses her in the portraiture of those good [illegible] people who fill up the greater part of the canvas [illegible] life. Such a woman, for instance, as Mrs. Eas[illegible] before us. A good mother and an amiable frie[illegible] dulous with respect to the morals of her sons as [illegible] virtuous lady of middle age who thinks she has fath[illegible] wickedness of human life whereof her dear boys know no[illegible] while in point of fact it is she who has simply glanced at [illegible] surface, and they who have gone down to the dregs—who does n[illegible] count such a one among his friends? and what young man h[illegible] not a Mrs. Eastwood of his own, for whom he feels that curious mixture of manly admiration and filial tenderness which it is one of the prescriptive rights of the mature siren to excite? Unable to rise to the higher level of true nobility, and just as unable to sink to ignobility, facile in manner, self-willed in fact, fond of her children and glad to sacrifice herself for them, but worldly to a certain common-sense extent, and by no means self-sacrificing to the point of abjectness, she is the living type of the ordinary English mother and gentlewoman. There are hundreds of Mrs. Eastwoods, but few Mrs. Oliphants to present them with such delicate truth and careful minuteness. Nelly Eastwood, too, is a charming study, the very perfection of a bright, healthy, natural young English girl, who loves her mother dearly and yet is as saucy on occasions as she is affectionate always; who quarrels with her brothers and snubs them when they are impertinent, as all right-minded sisters do; and who specially doubts and dislikes her brother Frederick, who is her mother's favourite and the Joseph Surface of the group. The boys Dick and "Jenny," the latter youth being more rightfully Plantagenet, are pleasantly and broadly sketched, and each individual character is well maintained. Of Innocent herself we have not very much good to say on the score of artistic merit or likeness to life, though the idea of her character has its own merit; with Frederick Eastwood, handsome, melancholy, like Charles I., looking, said the ladies, "as if something would happen to him," a hypocrite and thorough-paced scamp, we have very much fault to find. The Battys, father and daughter, are coarsely drawn, and "'Manda" is especially exaggerated; and if young Molyneux is less vile than Frederick, he is quite as disagreeable, and betrays the subtle antagonism of sex which Mrs. Oliphant has allowed to appear more than once in the present work.

Innocent is rightly named, according to the Northern meaning of the word. At sixteen she has the brain of a child of six, and barely escapes qualification for Earlswood. She is as much an idiot as is possible to a creature who can talk and walk and feed itself like other people, who does not set the house on fire, nor tear up its clothes, nor make a noise to itself like a chattering ape, and who can give an intelligent monosyllabic answer to a plain question. She lives in a fog and sees everything dimly. People come and go about her like the shadows of a dream, and she sits still and wonders what they mean, and why they are all talking and laughing, and what they would have her say or do; and oh! if they would only leave her alone! Nothing impresses her, nothing rouses her. She has but one emotion—love for Frederick, sometimes supplemented by fear when she is scolded, or runs away and loses herself, as happens to her more than once. She neither laughs nor talks, neither reads nor works, nor lives otherwise than as a staring stuffed rag doll, cleverly wheeled and springed—a dumb and stupid Galatea whom even Pygmalion and Love together cannot waken into womanhood of an understanding kind. But she is pretty in person, and, if uninteresting, is harmless.

---

* *Innocent.* A Tale of Modern Life. By Mrs. Oliphant, [illegible] the "Chronicles of Carlingford." 3 vols. London: Samp[illegible] 1873.

Innocent is Mrs. Eastwood's niece, left an orphan and absolutely alone in Italy, and is taken into the cheery little London household with mingled doubt and fear, reluctance and remorse. There had been some hard passages between Mrs. Eastwood and her sister, Innocent's mother, in early days. Presumably Mr. Vane, the husband of the one, had made love to the other; then cut the knot in which he had entangled himself by running away with the one he liked best, leaving her for whom he cared least to wear the willow with such grace as she might command. Mrs. Eastwood had hitherto resented the ill done her, and now she was remorseful for the long estrangement which had left poor motherless Innocent in the hands of a bad man, until the day had come when she was fatherless as well as motherless, alone in the world but for the aunt whom both father and mother had injured. Pretending to be ill and in need of change and relaxation from his hard work as clerk in the Sealing Wax Office on the one hand, and to be disinterested in his offer of service on the other, Frederick proposes to go to Pisa as escort to his cousin; but he halts at Paris, where he spends his time and money in gross dissipation, and falls into the clutches of one Mr. Batty, a vulgar "vet.," who first joins him in his debaucheries, and then lends him money to take him on to Pisa and back to England. At first sight of the young man with his Charles I.'s face, Innocent falls in love with him in the half childlike way considered proper for such a "natural"; content to stare at him, to touch him, to sit by him, not understanding one word in ten of what he says, and nothing of what he means. He takes her home, when, bewildered by the journey and the novelty of so many faces, and crushed by the small, densely furnished English rooms, she collapses into more than her ordinary idiocy. She wakes up a little when Frederick is about to marry the sweetiful, full-blown, vulgar 'Manda Batty, but only to wish that cted, and 'anda was dead, and to say she ought to be killed. Later in roof of his p wakes up a little more when she thinks she has poisoned rhyme in t well-moulded, richly-coloured sensuality; and when and another ends, it leaves her quite rational for an idiot, and evished later out to be married a second time. Meanwhile her expetaking a have been many and varied, but we are bound to add most ave now, and in the case of the trial scene absurd. Also we demur fication appeal to Sir Alexis Longueville when Frederick makes plies to her; and for the poor old gentleman's term of martyrdom ave can find no word of sympathy too strong or of incredulity too great.

We think Mrs. Oliphant attempted too much in this character. To make an unemotional idiot interesting was a task beyond her power or that of any other person. Had the girl been a real Galatea, innocent of evil, of conventionality, of society, of all knowledge, but still a living creature with a heart, she would have had some kind of charm. But Innocent is a simple case of arrested development, dense and dull and heavy as lead, with as little feeling as intelligence, and seemingly incapable of learning. On what has Mrs. Oliphant founded such a character? For, just as no man is an artist who cannot draw the human figure under his drapery, so no novelist is a master of his craft who has not a correct physiological basis for his characters. Neglect and a lonely life might have dwarfed Innocent's intellect, and have checked her power of feeling; they might, in fact, have produced such a case of arrested development as is here presented. But then Innocent would have always remained idiotic; and if she had had the brain of a child of six when she was sixteen, she would not have been much more advanced at eighteen. If it had been only her education and power of self-expression which had been checked, she would have been loosened from the bonds of intellectual dumbness earlier, and have come out into the light of reasonable humanity long before she did. We think, too, that Mrs. Oliphant ought either to have killed her or put her into the Sisterhood for life. There would have been something pathetic in the one, and something harmonious in the other. There is nothing of either in the patent prospect of "Jenny's" making her his wife; and if one's imagination goes into the details of her future as wife, mother, and house mistress, we can only feel that the author must have wished to punish the whole sex in the person of Plantagenet Eastwood, and that she means to convey a subtle hint that any female fool is good enough even for the better kind of men.

In the love of Frederick for 'Manda Mrs. Oliphant has essayed another difficult task. She has attempted to analyse and present in a decent form a feeling which is no more nor less than simple animal passion. Granting any amount of technical skill in her manipulation, the subject remains always unsavoury; and we wish, for the sake of her own literary reputation, the comfort of her readers, and the nobler interests of her art, that she could have dispensed with the disagreeable Batty episode. But, indeed, Mrs. Oliphant is terribly hard upon us poor male sinners. What with Innocent's vaguely immoral father, old Batty's want of anything that might serve as the semblance of a moral sense, Frederick's abominable hypocrisy and fiery sensualities, Ernest Molyneux and his cowardice, his worldliness, sloth, and ignobleness generally, we come out from our fair painter's hands rather worse, we hope, than nature and fact have made us. And we cannot accept honest Dick, or direct "Jenny," or even chivalrous Sir Alexis, or upright John Vane, as sufficient makeweights for virtue against such a formidable array of villany on the other side. Four scoundrels are rather hard measure, even with four good fellows to balance. Is Mrs. Oliphant going over to the enemy, and becoming a "man-hater," like the foolish sisters? We hope not. For, if she is, bad art and false principles together is [illegible] to make havoc of the work of one of our most favourite authors—one from whom so much was expected, because so much promise was given of old time. If, however, she does not [illegible] thought while she may, and give herself rest and leisure for [illegible] ful work, we and her other critics, after having chronicled her various successes in no grudging spirit, shall have only to lament her failures; as, indeed, we wonder now how the hand which wrote the *Chronicles of Carlingford* could give the world anything so hurried, so undigested, and so untrue as *Innocent*.

AMERICAN LITERATURE.

THE third volume of the United States Census* deals generally with "Wealth and Industry." It shows that the total estimated property of the Union has increased enormously since 1860; the valuation in that year being sixteen thousand millions of dollars, while in 1870 it was thirty thousand. And, as in the former year the United States contained nearly four millions of slaves, worth probably some two thousand millions, the real increase may be taken at cent. per cent. It would of course have been greater but for the war. It is true that a deduction of considerable amount might be made for the public debt, or rather for that part of it which is owned abroad; and that a certain portion of the formal wealth of the country, under the head of personal estate, consisting of mortgages, &c., on real property, is reckoned twice over; so that the gross amount in either case, and especially in the latter, is too large by a sum considerable in itself, though forming but a small fraction of the whole. But nevertheless we may take the normal rate of increase to be that above stated—*i.e.*, that the wealth of the country as a whole doubles itself in ten years. In the first place, the increase between 1850 and 1860 was greater than this. Secondly, though there are heavy deductions to be made on the grounds just stated, there are also allowances to be made for the effects of war, which would more than counterbalance them. The property of the Southern States ought, according to precedent, to have increased almost as rapidly as that of the Union at large; less rapidly than that of the North-Western States, but faster than that of the agricultural States of the East. But the South has not only not gained, but has lost enormously; lost far more than can be ascribed to the mere formal change made by the fact that her labourers are no longer reckoned as part of her "personal estate." For example, Alabama is worth two-fifths of her valuation in 1860; and the assessment of her real estate—always far less than that "true value" which we have taken as the basis of these comparisons—has fallen from 155,000,000 dollars to 115,000,000 dollars. The total valuation of Georgia has fallen in the ratio of thirteen to five and a quarter; the assessment of her real estate from nine to seven. Louisiana has lost very nearly one-half of her "true value," and one-seventh of her "real" assessment. South Carolina has lost in round numbers 345 millions out of 545; Mississippi two-thirds of a total valuation of six hundred millions. This havoc cannot, as we have said, be accounted for by the mere emancipation of the slaves, nor by the ruthless devastation wrought by the invaders. The latter would have been far more than repaired between 1865 and 1870, and the former would have been confined to a loss of some five hundred dollars per head of the coloured population; and, had order and self-government been left to the States, the ordinary rate of production during these five years would have recovered the best part even of this nominal loss. The actual figures testify to the misgovernment and oppression they have suffered; to the utter disorganization of industry, the repression of Southern energies by a vexatious and harassing tariff, the absolute demoralization of the negro, and the consequent inability of a people weakened by the loss of a large proportion of the flower of its manhood to make head against the artificial discouragement steadily inflicted on it. These statistics are the conclusive answer, supplied by Northern officials, to the allegation so often repeated by Northern partisans in this country that the South is not suffering; that though the planters have been impoverished and the great estates broken up, cultivation is as extensive and as prosperous as ever, and the losses of the rich more than compensated by the gains [illegible] and the middle classes. What recovery the [illegible] those Border States which (except Virginia) we [illegible] the war; and the appearance of general prosperi[illegible] gross figures is due solely to the extraordi[illegible] think the inflated and unreal, commercial a[illegible] of the North and West, especially the latter.
